PETERBORO SAW MILLS

Reliable Carriages

Specially Built for Hard Work

Jarring by the canter wil not break them, neither will it effect the quality of the lumber.

You can cut with them as fast as you like.

Some features :

Steel headlocks and Oak frame.

Heavy cross girders and steel rods to make the carriage rigid.

Extra heavy set shaft and axles.

Racks and pinions milled from solid steel forgings.

If you put on the 4 inch Steam Set Works you can't make bad lumber.

It will also increase your daily cut, 2,000 feet.

Send for Catalogue 20

FIRE INSURANCE

Managed by Lumbermen—and confined to insuring lumber and lumber working plants exclusively

LUMBER UNDERWRITERS fire insurance business is strictly a lumber trade proposition and is the practical result of the trade association idea of co-operation. It stands for the low and right premium charge and for the equitable adjustment of losses.

LUMBER UNDERWRITERS policy of insurance is non-assessable and is issued in the standard form required by New York and other states.

STRENGTH OF THE POLICY

Deposit in cash by the Underwriters, - - - \$100,000.00

Reserve, maintained at 50% of outstanding premiums, 95,594.97

Over and above the cash assets every policy is guaranteed for payment of any loss by the below fifteen Lumbermen Underwriters—

Guy E. Robinson, 1123 Broadway

A word to the Trade about Hot Air, 3,000,000 a day shingle advertisements

The FULL daily capacity of the 200 shingle machines in British Columbia is 4,000,000 shingles. On an average during the months of operation about ten per cent or more of these machines are idle; and it is also well within the truth to state that almost the WHOLE Shingle Industry of the Province is closed down tight from three to four months during every year; and the local consumption of shingles in the Coast cities and towns—about 300,000 per day, must be deducted from the rail shipping capacity; also as shingles are now being marketed, it is safe to state that fully one-third of the out-put will be sold by manufacturers DIRECT to the retail trade. The net result of the above is about 2,200,000 B.C. Shingles per day available for rail shipment, and to be divided amongst ALL the brokers and wholesalers in Canada and the United States who handle our shingles.

From the above facts, Lumber Dealers can judge for themselves as to how much truth there is in an advertisement which states a SHIPPING CAPACITY of 3,000,000 shingles daily.

We are the OLDEST established strictly Wholesale Lumber Dealers in British Columbia, and are in a position to supply the Trade with their lumber and shingle requirements.

Best on the Market

This is the machine for which we claim all the good Qualities possessed by any other and a great many valuable improvements besides.

This time we wish to call your attention to one of many important points which prove conclusively the superiority of the **Dunbar Logging Engines**: that of the Hydraulic Apparatus for raising and lowering the Boiler, an invention of our Mr. Dunbar, Sr. (for which patents are pending). By this device all danger from rush of water to either end of the Boiler, caused by irregularities of the road, is avoided. One of the most serious drawbacks in other Engines is the fact that the Boiler is stationary on the frame, consequently a source of great anxiety because of the danger to both the Crown Sheet and the Tubes. You can readily understand that in going up or down hill either the Crown Sheet or the Tubes are bared, causing them to become so heated that they will leak badly, and after repetition for a time the Boiler will be practically ruined.

This improvement, which supersedes our previous method for raising or lowering the boiler, has been added since cut herewith shown was made.

Should you contemplate putting in a Logging Engine we shall be glad to take the matter up with you and give you all particulars.

Quotations for Logging Sleds furnished.

SIMONDS

Crescent-Ground Cross-Cut Saws

This is the identical Crescent-Ground Cross-Cut Saw which has for years been recognized as the best made or used in the United States. Since beginning the manufacture of these saws at our Canadian factories, we have found and are supplying a greatly increased demand throughout the Dominion. The Saws are made of Simonds Steel, and Simonds Steel is the best saw steel made. They run easy, cut fast and give good results. Sold by the hardware trade or direct from our offices.

We are Specialists on

Lumber and Saw Mill INSURANCE

FOR OVER THIRTY YEARS we have made a close and constant study of this specialty, embracing not only "The Best Protection at the Minimum Cost" in the sense of Policies in the Strongest Companies at the lowest possible rates, but the enhanced Protection of such Policies so worded as to Insure you under whatever form of sale or undertaking you may make with your customers, unaware as you may be of the application of the Canadian Insurance Law in such instances.

We invite inquiry as to the above and our "ADVICE SHEET" system which we originated several years ago for the special convenience of our Lumber Customers.

We personally inspect each of the plants we insure at least twice a year.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Special care is taken to secure for publication the latest and most trustworthy market quotations throughout the world, so as to afford to the trade at home and abroad information on which it can rely in its operations.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Vol. 29

Toronto, January 1, 1909

No. 1

A Profitable Side Line

A profitable side line for a retail lumber yard is always a matter which will prove interesting to the owner. This will account for the fact that the handling of cement has recently become quite a common business with retail lumber dealers. The way the matter is looked upon is summed up by a dealer in a town possessing two yards, who recently said: "Do you know the cement business is getting to be a big thing in our trade these days? We have sold enough cement this spring and summer to average practically a carload a week. And yet we haven't had a great many specially big jobs. It has just been a steady demand for cement, and its use is increasing so that it is getting to be a big thing in connection with the lumber business."

This man's experience and that of many others should convince those who have not already taken up this business that it will be well worth their while to investigate the point. Cement has recently obtained so great a prominence in the building business that to a certain extent it advertises itself, and the handling of both cement and lumber by one dealer must be a source of much convenience to contractors who are able to lay in stocks of both supplies at one yard. A dealer handling both articles does not need to worry about any falling off in lumber demand on account of the competition of cement. In the United States this combination of business has become extremely popular, although it is but a short time since it scarcely existed. The dealer in building material is the proper man to push the sale of cement. He is in touch with the demands of the market and is in a good position to regulate the grade of cement which is sold to the public. For this reason he can be of much benefit to the cement business as well as to himself. Although the sale of cement has only recently become an important factor in business, it has already been surrounded by quite a well-defined system of ethics, which is daily making the conditions of the trade more

pleasant. Both the demand and the supply of cement have increased extensively, and the retail lumber dealer who takes advantage of the opportunity thus afforded by adding a new feature to his business will in most cases make a considerable profit out of his new venture.

Importance of Good Salesmen

The education of a good lumber salesman is quite an intricate matter, but his work is of the utmost importance to a firm. Owners of lumber yards have realized this from the first and it is a common experience to find the most successful yards manned by the best salesmen. In the United States there are schools where salesmen are taught to "hypnotize" customers, that is to say, by means of suggestion, to influence customers to purchase goods. At first thought one might imagine that this class of salesmanship would result to the disadvantage of the customer. With an unscrupulous salesman it would have this result, but the same customer would not be bitten twice. The successful salesman will not only persuade the customer to purchase, but will sell him something which he absolutely needs. The customer will find out subsequently that the salesman was more conversant with his needs than he was himself. A salesman in a yard frequently knows very minutely the extent of a customer's needs. He can be a real assistance to the customer as well as a source of profit to his firm.

The same process of business reasoning can be made use of by yard merchants. Every merchant has his own ideas as to how to persuade customers to come to him. Some resort to advertising, offering prizes, issuing circular letters and hand bills, etc. These methods are all followed for the one purpose of suggesting to the customer that he needs something and that he can best supply his need at a particular merchant's yard or store. The gist of all this is that lumber merchants of all kinds, if they wish to carry on successful business must be supplied with salesmen who not only know the goods which they have to sell, but are also good judges of human nature and of the necessities of consumers, so that they may take advantage of every instance, however trifling, to turn custom their way.

The British Columbia Timber Laws

Opinions are divided in British Columbia regarding the effect of the provincial timber laws. Under the present law it is probable that speculation, which was formerly the greatest bane of the timber business, will be to some extent lessened. It is believed, however, that these laws were enacted too late to prevent a great deal of loss to the province. One prominent operator, speaking upon the subject, recently said that the Provincial Government had sold licenses far too readily, when they were in need of a revenue. Many men had obtained licenses who could not tell the difference between a fir and a cedar. This opened the door for speculation, and the result had been extremely injurious to the industry. Much of the best timber had been taken up under these licenses, and in many cases had been resold at enormous advances. The selling at an advance, in itself was not such an injury, but the fact that much of this timber was sold to Americans was a source of material loss to the province. The Americans, although their money would assist in developing the country, would have no real interest in the development other than that which concerned its money value to them. If they remained in possession and cut down the timber the profits would go out of the country and the only benefit to Canada would be in the employment of the necessary labor. If the United States tariff upon Canadian lumber were taken off, by Congress, little or none of the money made by Americans in manufacturing Canadian lumber would be left in Canada. In the end Canadians would be deprived of their timber without having obtained any profit.

The same authority, referring to the subject further, instanced the cases of Eastern Canadian provinces as examples of a much wiser method of administering the timber resources. The British Columbia Government should have followed these examples by putting the privilege to cut lumber up at auction and selling it to the highest bidder. By this method they would have reaped a substantial reward and have obtained a good price for their timber. This would be an improvement upon the system under which all the profits went to the speculator

Men who were inclined to speculate might think twice before investing their money, but a desirable result would be that those who would invest would be men of keen business ability who would understand thoroughly the proposition they were undertaking, and whose interest in the country would doubtless result in the timber resources being developed according to businesslike methods. Whatever the result, it would be at least certain that in return for the timber the province would

receive something commensurate in the way of money. This would mean that the people would benefit instead of the speculators. According to the plan of selling licenses which was formerly in operation the advantage had all been for the speculators. The Government realising that it was dissipating its resources, had shut down upon the speculators, but it was rather late in the day. However, it was better late than never and under the new regulations they could look for better things.

Statistics of Export and Import of Lumber for Canada

The trade and navigation statistics issued by the Dominion Government covering the year ending March 31, 1908, afford some interesting comparisons relating to the imports and exports of forest products. The gross value of exports for 1908 was \$44,504,371, whereas for the period ending March 31, 1907, the value was \$46,017,000. It will be seen, therefore, that the period of business depression which continued until the fall of 1908, had been well under way for some time previous to March 31, 1908, and was responsible for the decline in the value of exports amounting to nearly \$2,500,000. The greatest decline was in lumber, the value of the exports being only \$35,911,288, a decrease of about \$3,200,000 from the value of the exports of 1907. Timber exports amounted to \$1,830,701, against \$2,294,995, a decrease of nearly \$500,000. The exports of paper showed an increase of \$1,400,000, amounting in value to \$3,511,104. The value of the manufactures of wood exported was almost identical with that of 1907, being \$5,091,230. The export of logs showed a slight increase and amounted to \$699,138.

The imports of wood and their manufactures showed an increase during the year. The total value of imports was \$2,076,613, an increase of about \$140,000 over the corresponding period of 1907. The imports of paper and its manufactures amounted in value to \$3,987,981, an increase of about \$400,000 over 1907. The free goods imported amounted in value to \$9,953,164, against \$7,490,081 in 1907. It is noticeable therefore that the imports, while increasing slightly, as against a decrease in exports, nevertheless give interesting evidence of the great preponderance of the export lumber business of Canada.

The produce of the forests exported ranked third in value among Canadian exports, being exceeded only by agricultural products and animals and their produce. The details are as follows:

Produce of mines	\$39,177,133
Produce of fisheries	13,867,368
Produce of forests	44,170,470
Animals and produce	55,101,260
Agricultural products	66,069,939
Manufactures	28,507,124
Miscellaneous	67,674
Total	246,960,968

Canadian exports of the products of the forest for the month of September, 1908, amounted in value to \$3,982,984. In September, 1907, the total was \$5,979,198. In September, 1906, the total was \$5,373,829. The total for the nine months ending with September 30, 1908, was \$26,820,294, against \$32,203,435 for the same period in 1907 and \$33,020,552 in 1906. The total exports of forest products for the twelve months of 1907 amounted in value to \$45,285,118, against \$46,113,903 in 1906. It is to be expected therefore that the exports for the twelve months of 1908 will fall about ten million dollars short of those for 1907.

Following are the statistics contained in the reports:

Exports of Forest Products.

	1908	1907	6 months ending Sept. 1908	Sept. 1908

Total, forest	\$9,953,164		

N.O.P.—Not Otherwise Provided For.

Reflections on the Tariff Issue

The tariff issue is uppermost at present in the minds of United States and Canadian manufacturers of lumber and will remain so until Congress takes whatever steps it finds advisable in regard to changing the duty on lumber from foreign countries. It is interesting to watch the course of affairs on the other side of the line and to study the motives which actuate lumbermen in the presentation of their cases before the tariff committee. The "American Lumberman," in a recent issue, made the following cynical remark: "Canadian exports of lumber were affected by the American business depression, but whenever someone makes a noise over here like tinkering with the tariff, hope begins to spring eternal in the Canadian breast." What about the American breast? Are there not a few manufacturers in the great republic whose breasts throb now and again with a similar class of hope, when the tariff is about to be tinkered? It could be easily shown that the motives which actuate most of the witnesses who have appeared before the tariff committee are those of supreme self interest.

Take the case of Mr. Edward Hines, who appeared before the committee on November 20th, and compare his statements at that time with the statement which he is reported to have made on Dec. 20th. On Nov. 20th Mr. Hines was a strong supporter of the tariff, thinking that if anything it ought to be increased. During the month intervening between then and Dec. 20th, something seems to have occurred to change his views, for Mr. Hines was quoted in the press throughout the country as having made the following statement: "We are hoping that a further reduction may be made in the cost of lumber to American consumers by the taking off of the tariff. The greater part of our land is in Canada, and this would enable us to bring the Canadian lumber into the United States, a thing that the tariff practically prohibits now." This statement was, according to report, made by Mr. Hines in an interview during which he discussed the formation of the \$20,000,000 lumber merger to be known as the Virginia & Rainy Lake Lumber Company. According to Mr. Hines' reported interview, the new company has an area of timber which includes a large tract in the Rainy Lake District and another north of Virginia.

If the reports of Mr. Hines' views are both correct, he has made a most remarkable change of front. In his evidence before the committee he laid great stress upon the number of lumbermen employed in Michigan, Wisconsin, Minnesota and Iowa, which was in the neighborhood of 100,000, whose living would be taken away and whose great purchasing power would be destroyed if the tariff were reduced. Since the reported merger of his interests in the new company he has apparently forgotten all about these people and is anxiously looking forward for an opportunity to take Canadian lumber into the United States.

Probably if the records were carefully read many a similar example could be found and all of them would help to prove that the principal matter at stake is that of self-protection. The time seems to have come when lumber manufacturers in the United States realize that the future of their business is in serious jeopardy from competition from Canada and also from shortage of raw material. For this reason many are inclined to injure their own markets for the sake of preserving their raw material. In the face of such a course there is probably only one logical course to be pursued by Canada. In spite of the inclination on the part of some manufacturers to sell all the lumber they can in the United States, Canadian legislators will perhaps soon see the necessity for protecting Canadian timber resources against the inroads of United States speculators. The best method of doing so and, in fact probably the only effective method, would be to impose an export duty upon lumber. If this were done, the situation would be relieved of much of its uncertainty. The temptation to those Canadians who favor free entry to the United States would be removed and the whole industry would be placed on a more satisfactory basis. Incidentally Canada would become possessed of a good source of revenue which is now held by the United States.

A new Canadian Trade Commissioner has been appointed, to look after trade interests in Glasgow, Scotland. The establishing of a commercial agency at Glasgow will assist in taking advantage of transportation facilities afforded by the direct line of steamships plying between St. John, N.B., and that city, which for some years has been receiving subsidies from the Government and to a certain extent is under the supervision of the Department of Trade and Commerce.

The steamer "Kristiana" is reported loading pulpwood for a British port, at Seven Islands, Que. This port is 600 miles from the open sea and the sailing of the "Kristiana" will constitute a record for winter sailing. The "Kristiana" is a steel screw steamer of 1,672 tons and is a new vessel, being built by J. Brumer & Company, of Sunderland, last year. She is owned in Norway.

New Vice-Gerent Snark for Eastern Canada

Mr. J. L. Campbell, of the firm of Campbell & Carman, lumber dealers, Toronto, has been appointed to the position of Vice-gerent Snark of the Concatenated Order of Hoo-Hoo for Eastern Canada. The appointment was recommended by the retiring Vice-gerent Snark, Mr. W. J. MacBeth, of the Parry Sound Lumber Co., Mr. Campbell, whose portrait is published herewith, commenced in the lumber business in 1890 at Melita, Man. His business is still going on at that place and includes a line of yards at four points, carried on under the name of Campbell & Ferguson, Limited. Mr. Campbell was president for several years of the Western Retail Lumbermen's Association, a body which included all the wholesalers and retailers of note from Fort William to Vancouver. About four years ago he came to Toronto and two years ago the firm of Campbell & Carman was established.

Mr. Campbell is one of the oldest members of the Hoo-Hoo in Canada. He was among the first twenty-five to be initiated. This occurred about nine years ago. Although he has been so intimately connected with the lumber business and with the Hoo-Hoo order, he has as yet refrained from holding office in the order. He was approached, however,

J. L. Campbell, Toronto—The New Vice-Gerent Snark for Eastern Canada.

by a number of influential members who persuaded him to accept the honor and promised him their heartiest support in his work.

It is expected that the next concatenation will be held in Haileybury, Ont., some time before the end of January. The date and the place, however, have not been actually determined.

A Washington despatch says that during the examination of southern lumber manufacturers before the Ways and Means Committee, Chairman Payne made it very apparent that he is strongly in favor of admitting foreign lumber to American markets free of duty. Mr. Payne has given intimations to this effect heretofore, but never so pointedly as when he undertook to lecture a southern lumberman for asking for protection on his product, when his state persists in voting the Democratic ticket. Only one member of the Ways and Means Committee seems favorable to the retention of the \$2 duty on lumber. One witness when asked whether they could manufacture cheaper in the United States than in England or France said: "I think we can, from the fact that we sell our goods in those countries. We have improved methods in all lines of manufacture in this country, which benefit us in the manufacture of our goods."

The Big Bay Lumber Company, of Kalamazoo, Mich., has sold to the Brunswick-Balke-Collender Company 12,000 acres of hardwood timber land located in Marquette County, Mich. The timber is of high quality, consisting of oak, maple and walnut of exceptional quality and size. This is the second large timber tract these people have bought in Michigan during the past few years; their previous purchase being 3,700 acres in Waford County. They also have large timber land interests in North Carolina. Logging operations have already been commenced by the purchasers of the property and the sawmill will be in operation within the course of the next few months.

Personal Mention.

Robert E. Carter, of the Carter-Stevens Lumber Company, Limited, 103 Bay street, Toronto, has left for England on a business trip.

William M. Boner, manager of the Weyerhaeuser Lumber Company, was recently in Vancouver.

F. A. Sullivan, cashier of the Portland Lumber Company, Portland, Ore, made a business trip to Vancouver, B.C., last month.

D. H. McLennan, of Montreal, Que., has been spending a few days in New York on some lumber contract business.

W. H. Magoon, vice-president of the Howard Cole Timber Investment Company, of Vancouver, B.C., is spending several months at the Chicago offices of the company.

E. J. Witherspoon, timber land dealer of Vancouver, B.C., made a recent trip to Seattle, Wash. Mr. Witherspoon was formerly engaged in the logging business on the Columbia River.

Dr. D. F. Brooks, of the Brooks-Scanlon Lumber Company, lumber dealers, Minneapolis, Minn., made a trip to Vancouver, B.C., a short time ago, and it is reported that he bought some timber while there. Dr. of material from the Pacific coast next year.

Leonard B. McCleary, of Thorold, Ont., is looking into the lumber and timber business in Seattle with the idea of locating somewhere in western Washington. Mr. McCleary has been in the logging business in Ontario for some years. He is a nephew of W. I. Ewart, the Seattle timber land dealer.

Mr. Peter Whelen, manager of the Shepard & Morse Lumber Company, has been elected, by acclamation, president of the Ottawa Board of Trade. He will be head of the movement just started by the board to spend \$5,000 a year on advertising the city's advantages as a manufacturing centre. The Ottawa Council proposes to spend \$10,000, and steps are under way to secure the co-operation of Hull to conduct a joint publicity campaign.

Mr. Charles A. Barclay, of Brougham, Ont., returned a short time ago from British Columbia. His company, the Algonquin Lumber & Power Company, have acquired large timber limits in that province, which they propose to operate, and Mr. Barclay's visit was in connection with the inspection of these properties. He speaks enthusiastically of the great timber resources of the western province and anticipates a wonderful development of the lumber business within a few years. It is Mr. Barclay's intention to return west again early this month.

Forestry Students' Good Work.

The first senior class of forestry students of the University of Toronto were not employed by the Government last summer, but by the Turner Lumber Company, in making forest surveys. The result of the work, having been just delivered, has called forth the following appreciation by the president of the Turner Lumber Company, showing what practical men think of the University-bred men:

Dr. Fernow, dean Faculty of Forestry, University of Toronto. Dear Sir,—We have received a topographical map of lots 1 to 12, concessions 5 to 9, of the Township of Wilson, which was made by students of your department, after they had made an examination of the territory. This map shows accurately the character of the country, the location of roads, streams and lakes, and also the timber, with the kind designated.

We do not believe that we could hire a timber cruiser or an engineer in Canada who could get up a map as valuable to us for the purpose for which it will be used.

We sincerely hope that next summer you will be able to recommend to us students from your department who can do similar work for us on this township and others, as we are anxious to have all our holdings examined and maps made of them in the same accurate and intelligent manner as the work performed by Messrs. White, Dwight and Mitchell.

Yours truly, DWIGHT J. TURNER, president.

Japanese imports of wood during the ten months ending Oct. 31st last were as follows:

	October. 1908 yen.	Ten months ended 1908 yen.	October 31. 1907 yen.	1906 yen.
Teak	8,544	397,627	799,109	489,194
Oregon pine, fir and cedar—				
Board	13,325	156,027	283,232	45,593
Timber, round, squared or sided	22,799	603,903	643,645	267,519

The Campbellton "Graphic" states that Mr. Daniel McDougall, of that place, was arrested recently by I.C.R. Officer Savoie charged with the theft of nine carloads of pulpwood. Mr. McDougall claims the ownership of the pulpwood, asserting that his claim is justified, he having obtained it under a contract with Auger & Sons, also of Campbellton. The case will be tried at New Carlisle.

News from the Maritime Provinces

May Settle St. John River Troubles.

At last there is a prospect of an understanding between Canadian and American lumber manufacturers in regard to the legality or illegality of the placing of obstructions in the St. John River at the points where the river forms a part of the boundary between the Province of New Brunswick and the State of Maine. The question has always been a vital and important one to St. John lumber manufacturers, and, indeed, to all who cut logs on the upper water of the St. John or its tributaries. The trouble arose at first because of the action of the Van Buren Lumber Company and the St. John Lumber Company, of Van Buren, Maine, in holding the logs at that place by means of booms while they sorted out those that bore their marks. This, of course, meant a great delay, and each hour the logs remained stationary reduced their chances of being driven into safe water, the point at which they were held being many miles above safe water.

The matter has been the cause of much friction between the lumbermen on the New Brunswick side and the members of the two American firms mentioned above. On one occasion, when the late Levi W. Pond, who for many years had charge of the St. John River Corporation drive) attempted to force matters by cutting the booms which had been placed across the river in order to let his drive go by, he was threatened with firearms, and for many days the neighborhood was in a ferment. The Canadian Government and the American Government have at last taken the subject up, and a special commission has been appointed to deal with the matter. Each Government will appoint two representatives, and the four thus appointed will appoint a fifth.

Canada will be represented on the commission by A. P. Barnhill, barrister, and John Keeffe, both of St. John. Mr. Barnhill is one of the most widely known barristers in the provinces, and Mr. Keeffe is quite as widely known in the business world, he being manager of the James Robertson Company's local branch. No arrangements have as yet been made in regard to meetings of the commission.

A case brought in the New Brunswick courts by the Attorney-General of the province as a result of these troubles has been in the courts some years, and it was said recently that it would probably remain untried pending the results of this commission's work. The Canadian commissioners will have as counsel Hon. H. A. McKeown, of St. John, and Hon. W. P. Jones, both of whom have occupied the position of Solicitor-General of New Brunswick. Parliament at its last session appropriated \$20,000 for the expenses of this commission, and the Imperial Government has given its assent to the arrangements between the two Governments.

Scaling Discrepancies Cause Trouble.

A discussion of considerable dimensions has taken place between Messrs. The J. B. Snowball Company, of Chatham, the Fredericton, "Gleaner" and others.

Some days ago a paragraph appeared in the "Gleaner" to the effect that a scaler named W. P. Kirk, who worked in district No. 23, Northumberland County, made returns totalling to 3,355,388 square feet. A second survey was made, then a third, with the result that the quantity was increased to 12,934,000 feet. The Chatham firm's name was mentioned in connection with these incidents in such a manner that they considered that they had practically been accused of improper practices.

In a letter to the "Gleaner" Mr. W. B. Snowball, president of the J. B. Snowball Company, takes that journal severely to task and asserts that his firm has been designedly put in a false light.

As a matter of fact, according to Mr. Snowball's letter, they had made no sworn statement of their logs to the Government. Nor were they responsible for any settlement of the stumpage dues. They had cut only two millions of logs in Kirk's territory last year, and upon these logs they had paid full stumpage. Any other logs they had subsequently owned, and which had been surveyed by Kirk, had been purchased of third parties, namely Ronald Loggie, J. W. & J. Anderson, and G. W. Buchanan, and with the stumpage upon these the Chatham firm had nothing to do. Mr. Snowball in his letter furnished all the figures and referred the "Gleaner" to the Crown Land Office for verification.

A letter from the Surveyor-General of the province to the "Globe" in the same regard read as follows:

Fredericton, N.B., Dec. 16, 1908.

To the Editor of the Globe:—

Sir,—As there has recently been quite a discussion in respect to stumpage matters in the County of Northumberland, and especially in reference to the scale of one Wm. P. Kirk, a scaler appointed by the recent government, I think it is well that a correct statement of the matter be presented to the public, and for that purpose I beg to say that Mr. Kirk was scaler on District No. 23, which covered the region of the Tabusintac, Burnt Church and Bartibogue Rivers and branches,

on which territory Messrs. F. & J. Anderson, the Miramichi Pulp & Paper Company, Fox & Connell, Robert Buchanan, Donald Loggie, Damery & McDonald and James A. Rundle operated in the logging season of 1907-8.

Of these, the Andersons, Messrs. Buchanan and Loggie operated for the J. B. Snowball Company. The scaler at the close of the season returned the cut on the district at 3,355,388 s. feet.

The superintendent of scalers being dissatisfied with the return, by my direction called upon Mr. Kirk, and with him visited the scene of the operations, with the result that the scaler added 2,000,000 s. feet more to his previous return, making a final return of 5,355,388 s. feet. The superintendent being still dissatisfied with the return, I sent a special scaler into the district, who afterwards made a return, by which 7,578,612 s. feet were added to the previous final return of Mr. Kirk, so that the Crown Land Department collected stumpage on 12,934,000 s. feet. The 12,934,000 s. feet was the final return from the entire district, and the stumpage was paid by the several operators named above.

Yours truly, W. C. H. GRIMMER.

Sale of Alfred Dickie Company's Properties.

One of the biggest timber deals in the history of the Maritime Provinces is reported to have been put through in England, under which the properties of the Alfred Dickie Lumber Company, in Nova Scotia, pass to an English syndicate headed by Sir Thomas Trowbridge, the chief promoter of the Blacksod steamship enterprise from Ireland to Canada. The price to be paid for the Dickie properties, which include 405,000 acres of timber land and eight mills, is \$1,567,500. A stipulation of the deal is that the purchasers are to build a line of railway from Halifax eastward to Guysboro and the Strait of Canso. This railway will tap all the properties except that at Tusket, in the western part of the province, and will be subsidized by the Government. The Tusket property consists of 60,000 acres, and is disposed of at the rate of \$6 an acre. The 345,000 acres in the east are being sold at \$3.50 an acre. Alfred Dickie has large timber areas in Labrador and Newfoundland. These are not included in the deal. The manager of the new company will be T. N. McGrath, who is now in charge of the mills at Tusket.

Rains Doing Good In Nova Scotia.

A New Glasgow, N.S., report to the "Canada Lumberman and Woodworker" states that the recent snow and rains will greatly benefit the pulp and paper industry. There has been a scarcity of water all summer and the pulp mills have not been able to get anything like their production. In consequence, there is a scarcity of pulp. The prices, however, have not been so good as last fall. As soon as the mills can start running their full capacity, this shortage will soon be made up. The mill owners here are not very enthusiastic over the prospects, as they think that for the next two or three years prices as well as trade will be very slack indeed.

The lumber trade generally is not very bright at present, although some of the lumbermen have bright hopes for the coming spring. Most of the trade is with Great Britain. The prices for spruce for the coming winter will probably not average more than £7 10s. c.i.f. Liverpool and Manchester.

Obituary.

The death of the late Mr. Peter Owen, a partner in the well-known firm of Farnworth & Jardine, will be learned of with much regret by Canadian timber shippers, many of whom have done business with his firm in the old country. Mr. Owen was born in 1822 and served his apprenticeship with Edward Chaloner & Company, whom he left in 1861 to join the firm of Farnworth & Jardine. He was made a partner of the firm in 1886 and remained as such until the time of his death.

The death of the late Henry Marshall Taylor, a partner of the timber firm of Churchill & Sim, which was reported briefly in our last issue, will cause a great loss to the timber trade of Great Britain. Mr. Taylor was an old Lincolnshire man and a well-known member of various Hunts. He met his death while hunting with the old Surrey Foxhounds, being thrown when his horse stumbled over some hidden barbed wire fencing. The horse fell on top of Mr. Taylor, causing serious internal injuries, which resulted in death two hours later. Mr. Taylor was well-known to Canadians who export to the markets of Great Britain, and was highly esteemed by all who met him.

Mills supplying interior woodwork in Ottawa are fairly busy furnishing stock for the many blocks and buildings nearing completion.

The British Columbia Trade

Lumber Prices Advancing in Sympathy with High Price of Logs.

The scarcity of logs in British Columbia continues, and, in fact, they are growing even scarcer. During the last year there has been a tendency to reduce the lumber cut to the actual requirements. The tightness of money has been the principal cause for this, and the reduced cut accounts in a large measure for the scarcity. There has been an advance already of \$1 a thousand, and even at that price it is a difficult matter to get logs. Fortunately this advance in the price of logs has at last caused the price of lumber to increase, and the panic quotations prevail no longer. Not long ago rough lumber was secured in Vancouver at \$6.50 and later it could be bought at \$8. This price also prevailed in Victoria for some time. When logs were selling at \$10, these were certainly bargain-counter prices and could not be expected to prevail for long.

Lumber at present has advanced in Vancouver for the local market from about \$7 to from \$10 to \$14, and is still on the increase. There is practically no market at present for British Columbia timber on the prairies. Building operations will not be renewed there until the spring. This will be in April, or March at the earliest. But dealers on the prairies must lay in their stocks for the spring buying and business will probably be moving thither about the end of February. During the past summer lumber and shingle manufactures have been selling at about the cost of production. It is the general opinion that as soon as the spring opens there will be a decided advance all along the line.

Shingles are selling at \$1.60 at the mills. Two-thirds of the output goes to the United States, so that there is duty and freight to add. The result is that little more than the cost is obtained from the shingles. The transpacific lumber trade has become more active during the last month and prices have stiffened. The Australian and Mexican markets are improving. The Fraser River Lumber Company, of Fraser Mills, the Victoria Lumber & Manufacturing Company, of Chemainus, and the Hastings Mills at Vancouver have placed a quantity of business in the last thirty days. These three firms are the largest exporters in the province and their business is an indication of general trade conditions.

There is great activity on the other side of the line. Brokers from the Puget Sound country have been in British Columbia offering business for outside points. This indicates that the movement towards better times is not of a local character.

A number of vessels have recently been chartered for lumber, and while the rates have not stiffened materially, transportation agents, in some instances have refused quotations on future business at the present rates. No company cares to contract for business several months ahead on an advancing market, preferring rather to wait for the probable advance.

The mills in the interior are just concluding one of the most unsatisfactory years on record. It is estimated from the returns for the past ten months that the mountain mills have not produced during 1908 more than 25 per cent. of their aggregate capacity. Shipments have been correspondingly disappointing. Prices have been very low for some four or five months, but it is expected that they will improve shortly, in accord with prices elsewhere.

Washington Shingle Men Alarmed.

Mr. R. W. Douglas, of Seattle, Wash., claims that the failure of the railroads to perform their common carrier obligations is the cause of the great decrease in shingle exports from the Pacific Northwest during the past three years. In 1905, the State of Washington produced 68.6 per cent. of the entire shingle output of the United States. In 1906 the percentage dropped to 61.5, and the year 1907 shows the shingle exports from Washington have dropped to the small percentage of 57.6. The shingle shipments from Washington dropped from 52,550 carloads in 1905 to 34,443 carloads in 1907. An average carload is estimated to equal 200,000 shingles.

Mr. Douglas says there are in Washington 498 shingle mills in operation with a cutting capacity of 53,700,000 shingles a day. Based on a run of 280 days a year, as at present, the yearly output is 15,036,000,000, or approximately 75,000 carloads. He declares that the lack of transportation facilities rendered retail lumber dealers, who are in effect the shingle manufacturers' salesmen, unable to supply the ultimate consumers all over the country.

In pointing out that the present tariff does not properly protect the shingle industry in the United States against the Canadian manufacturers, he submits figures which show that 80 per cent. of the employees in the British Columbia mills are foreigners or Asiatics, who can be hired at much less expense than white men, enabling the Canadian mills to turn out shingles at a much lower figure than the shingle manufacturers

of Washington and other Northwestern states. The nearness of great quantities of excellent shingle timber to the mills of British Columbia; lower cost of stumpage and taxes; more nearly efficient transportation service to the American markets and more humane treatment of shingle manufacturers by the Canadian railways than that afforded Washington shippers by the railroad companies on which they must depend for transportation, are cited as some of the advantages that the British Columbia manufacturers held over the Washington manufacturers of shingles.

The records in the Customs house at Port Townsend, he says, show that the exports of shingles by the United States have dropped from 191 carloads in 1903 to 91 carloads in 1907.

If the tariff were abolished, he says, the Washington shingle industry would be ruined, even though the Canadian Government should immediately place an export tariff of 30 cents per thousand on shingles exported to the United States. Under these conditions it is reasonably certain that 4,500 cars of shingles from Canada would be shipped into the United States each year; that the American Government would not receive any of the big tariff benefit and that in such a case the Canadian Government would profit enormously by reason of the increased revenues. The so-called United States protective tariff of 30 cents a thousand had not prevented Canadian manufacturers from doubling their shipments to the United States during the last five years, and a tariff that would assure the Washington manufacturers full protection would have to be placed at a figure not less than 40 cents a thousand, if not 60 cents.

Outlook is Much Improved.

Mr. R. R. Hall, of Peterboro, Ont., vice-president of the Big Bend Lumber Company, of Arrowhead, B. C., who was one of the organizers of the Pacific Coast Lumber Mills, of Vancouver, says that the outlook for the lumber industry is exceedingly bright. Last year's depression was due to bad crops in the new provinces and the financial stringency. Conditions have lately shown much improvement, and the effects of the setback will soon disappear, as the requirements east of the Rockies are greater than ever. I am interested in the ownership of 13,000 acres of timber on Indian River at the head of the north arm of Burrard inlet, Brooks stated that every indication points to a good demand for all classes and while the question of erecting a sawmill has been discussed, no action will be taken at present. British Columbia timber is a sound investment, though it will never approximate anything like its real value until the Government makes the titles more secure. At present the tenure is too uncertain. It strikes me as peculiar that in an age when everybody is talking of forest conservation, the timber laws of British Columbia should be so framed as to encourage the millmen to cut their limits as fast as possible. The right to cut in perpetuity should be granted, and ground rent should be reduced together with an increase in stumpage dues. British Columbia might with advantage adopt some of the features of the Ontario regulations. A lot of timber there is worth \$15 on the stump.

Why the Price of Logs is High.

It may be difficult for lumber people in Eastern Canada to understand why the mills of British Columbia have to pay from \$10 to \$12 for logs. One eastern journal says such prices look very high, without knowing the conditions. They point out that a few years ago we had virgin forests in British Columbia with a dense growth of trees right down to the water's edge, and claim that, even with the large cut since then, the forests must be still very dense and the prices at present are abnormal. As a matter of fact, previous to 1890 no timber was cut in British Columbia which involved any serious expense in logging. Since that time, however, the timber has been ever receding as a result of lumbering operations. Logging has now become quite an expensive business. With the high wages, the great expense of reaching the timber with skid roads and the running of donkeys, there is little or no money even in logs at \$10 a thousand.

Mr. E. J. Palmer, manager of the Victoria Lumber & Manufacturing Company's mill of Chemainus, B. C., says in regard to the tariff question: "I can not for the life of me see why the abolition of the United States lumber tariff is going to hurt the Pacific coast. Of course, we are interested on both sides of the line, which makes our case a little different from those who have mills only in the United States. But we get \$1 less for our product south of the boundary, and as long as we can ship to the Canadian Northwest and get a higher price we would be foolish to send our lumber to the United States. The admission of lumber free to the States may hurt the east and south, but ought not to affect this coast, and particularly the mills of Washington and Oregon."

Interesting B. C. Short Lengths

Mr. Albert Cotton, shingle manufacturer of Vancouver, B.C., has recently had a complete electric lighting system installed in his mill.

The assets of the B. C. The & Timber Company are on the market to satisfy a mortgage of \$60,000. There is an attempt being made through the courts to stay proceedings until a purchaser can be found.

Mr. E. J. Palmer, manager of the large mill at Chemainus, B.C., is reported to have said to his chief, Mr. J. A. Hubbard, a millionaire lumberman of St. Paul, who owns three mills in the North-West, "I cannot for the life of me see why the abolition of the United States lumber tariff is going to hurt the Pacific Coast. We are interested on both sides of the line, but we get a dollar less on the United States side, and it pays us to ship to the Canadian North-West. The removal of the duty may hurt the East and South, but will not affect the Coast."

A large meeting of Western lumbermen from Winnipeg to Vancouver will be held at Calgary some time during the month of February, if the suggestion of Mr. P. Lund, president of the Mountain Lumber Association, is carried out. The intention is to call together the brokers, wholesalers, manufacturers and retailers, as well as the contractors and consumers. This would mean an attendance of about 1,000 delegates from the four provinces. The object of the convention would be to have a heart to heart talk upon business conditions, and to settle many of the differences of opinion which now exist.

Enquiries now being made among the mills of Vancouver lead to an estimate that next spring there will be a demand of from five to seven million feet of lumber from Prince Rupert, where the material will enter extensively into wharf construction.

Contractors who are figuring on the contract for the wharf which the Government intends to build there are now enquiring about prices at the mills and gathering data as to the cost of transportation. The timber in the north is spruce and hemlock. The necessary fir will have to be drawn from Vancouver. In Vancouver the lumber business is still very quiet, although prices have improved. There is little movement in the shingle

Mr. J. C. Turner, president of the J. C. Turner Lumber Company, which has large interests in the Southern States and yards in New York, in a recent interview said: "I regard British Columbia timber as a good investment. It is certain that the lumber schedule will be revised at the next Congress. Any reductions that may be carried out will tend to help the Canadian lumber industry. When the tariff was last revised I did not see the wisdom of allowing foreign lumber to swamp our market at a period when the trade was depressed, but then took occasion to declare that different conditions would likely prevail at a later period. I feel confident Congress will make some reductions, but it is improbable that the duty on lumber will be removed."

In his budget speech Hon. R. G. Tatlow, Minister of Finance for British Columbia, said that lumber was the backbone of the country. He thought there was one thing to guard against, and that was over-speculation in timber. If the lumber laws could be changed to the advantage of the millmen and lumbermen generally, while still protecting the interests of the province at large, they should be changed. If any attempt was made to raise the price of logs beyond reason the Government reserves would be thrown open. The total forest area of British Columbia was 182,000,000 acres, and for as far north as Alaska the Coast was heavily timbered, the forest lines following the indentures of the Coast. He predicted much prosperity for the industry in the future.

Mr. James Leamy, Dominion Timber Inspector, in a recent report stated that he had not lost five million feet of timber last season. In spite of this, however, he strongly advocated a more effective force of timber rangers. His force at present consists of eight men, who have to cover a belt 40 feet wide from Point Moody to the Rockies. Mr. R. J. Campbell, chief of the forestry department, is understood to be of the same view as Mr. Leamy on this point, and it is thought probable that the fire-fighting force will be increased in the near future. Mr. Leamy also states that he hopes to see the provincial government's fire fighting force increased on account of the extensive losses in their timber during the present year.

Mr. E. Smallwood, president of the Smallwood Stone Company, of Elyria, Ohio, recently visited Vancouver. Mr. Smallwood is closely connected with some of the men at the head of the pulpwood industry in the United States. A study of conditions has convinced him that the shift-

ing of the centre of the pulpwood industry to the Pacific coast is inevitable in the near future owing to the abundance and cheapness of the raw material.

With a view to getting detailed information, which he will submit to business associates, he had an interview recently with a Vancouver citizen who controls large pulpwood areas on Vancouver Island and the mainland. Mr. Smallwood stated that he is convinced that the raw material exists in almost unlimited quantities in British Columbia. He expects that he will shortly be in a position to submit a proposition which will result in the erection of a pulpmill at some point along the coast.

A good deal of business is being done in timber limits, a number of large sales being in prospect. Several are said to have been closed. This business is looking much better than it has for the past three months. It was depressed by the elections, both here and in the United States.

A group of men representing large financial interests, who deal in lumber across the line, have been in Vancouver for some time, and their business is to investigate timber with a view to buying. These men say that the lumber mills of Puget Sound are all working and have orders booked ahead, some having several months' work in sight, with orders still coming in. They claim that the duty on lumber will be modified or done away with and that as a result a large market will be opened to British Columbia timber. They want, therefore, to be ready for these good times. It is needless to say that the revival of the lumber business means a great deal to the Canadian Pacific coast. Activity in lumber means good times in business generally.

Mr. J. W. Coburn, of Nanaimo, B.C., recently visited Toronto and in an interview said that the lumber trade of British Columbia would become more brisk next spring. The recent slump in the price of lumber had affected no point outside of Victoria. The conditions in the fall of 1908 were in no way similar to those which confronted the mill owners at the same time in 1907. Then there were logs being sold at a sacrifice owing to the danger of destruction by teredos. In 1908, however, there were comparatively few available. Already there were indications of a stiffening in prices elsewhere and he predicted that there would be a sharp raise within a few months.

Speaking of the foreign market Mr. Coburn said that the prospects were that the demand for the product from outside points would be heavy during the forthcoming year. It was likely that much lumber would be sold also in the Northwest, to an extent that would influence local conditions, as the coast mills supplied over half of what was sold there. The other portion went to the interior companies.

The Canadian West's Great Future.

Canada's growing importance in the commercial world was forcibly described by the Wall Street Journal (New York) in a recent issue, in which it said:

"Facts are stubborn things, and they won't down. Mr. Hill and Mr. Harriman are clamoring for higher freight rates, notwithstanding the fact that they are dividing up twice and three times the profit that the Canadian Pacific is dividing among its security holders. These are great, bold, stubborn facts, and Wall Street should study them seriously. The Canadian West in 1884 had only a million bushels of wheat for export, this year it had 100,000,000 bushels, and in ten years it will have 500,000,000 bushels. It has a great railroad half completed between Duluth and Dawson City. The Canadian Northern is only sixty miles away from Duluth, and has 1,200 miles more to build before it reaches Dawson City. This year the Canadian Northern has handled 30,000,000 bushels of wheat, and the Canadian Pacific 70,000,000 bushels. In five years these two railroads will haul more wheat to the seaboard of the continent than all the railroads of the United States combined." The Journal goes on to say: "The Canadian West is fast becoming the granary of the world. Kansas grows but twelve bushels of wheat to the acre. Alberta has an average winter wheat production of 33 bushels to the acre this fall, and in the Canadian West there are 200,000,000 acres of virgin soil wheat lands. Alberta and British Columbia possess the greatest quantity of coal in the world, outside, perhaps, of Pennsylvania, and its adjoining states. British Columbia possesses lumber resources greater than all the states of the Union east of the Rocky Mountains. British Columbia is moreover now recognized as the orchard of the Empire. The Canadian West is now drawing 100,000 of the best farm population of the United States away to the virgin lands to the north. That country is being developed, and be it remembered that the climate of Alberta and Saskatchewan is the climate of Germany, and that Edmonton and Berlin have the same climate and latitude. The Mackenzie Valley will grow finer wheat and more of it than the Missouri Valley or the Arkansas, just as the valley of the Neva will grow it, and for like causes. However unpleasant these facts may be to the people of the States, it is folly to blind one's self to the fact that the Canadian West is destined to supply beef and pork, and cheese and butter, and bread to the world. It has the soil, the climate, and the cheap transportation, and it will have the people."

CAMP DEPARTMENT

Christmas in a Lumber Camp.

There are evenings and evenings in lumber camps, and our Canadian forests afford the finest opportunity for an aggregation of male laborers to spend the autumn and winter months in healthful and remunerative employment, that there is to be found in the whole universe, says L. R. Mackay, Keewatin, Ont., in the Manitoba "Free Press." Christmastide spreads a spirit all its own through the civilized world of to-day, and to the half hundred or more woodmen, sitting about the great stove in the sleeping apartment of a lumber camp, this spirit has found its way. Tokens in the form of Christmas cards, letters of good cheer, boxes of socks, mitts and underclothing, from anxious wives, mothers and sisters, arrived with every tote team, and by dawn of Christmas day few there were indeed who had not received some reminder of the season from relation or friend. What a miscellaneous gathering presents itself after the Christmas Eve meal. Baptiste Chasson, his mind reverting to a celebration of 12 o'clock mass in a quaint old Quebec church; with Alexander McLaughlin, seion of a one time Covenanter and Nova Scotian, with four-horse teamsters from Minnesota and Wisconsin, and English-speaking recruits from the Ottawa and Rideau Rivers, lumbermen to the very core, each one of them shoulder to shoulder they sit, their aim and object in life identical at the present, but their past experience as widely diversified as the poles. Sunny France, the icy slopes of Norway and Sweden, the deep snows and frozen depths of the Ottawa and Rideau Rivers. The Yuletide celebrations of the countries, each one owns allegiance to, occupy the thoughts in every heart. In each there is some remembrance of the central figure of the Christmastide festival. Baptiste and his 12 o'clock mass; the Presbyterian and Methodist and their Christmas Eve services. To one and all it means at least a semblance of worship to the Christ Child, the central figure of the world's allegiance. The spirit of Christmas has penetrated to the offices of the companies employing their half-hundred men, and sleighs laden with turkeys and geese, ducks and chickens, and all the accessories have been despatched to reach the domain of the cook in time for the Christmas festival, for, by the way, the cook of a lumber camp is the camp's autocrat, and though the foreman be the camp's nominal commander, yet to the cook the individual members owe allegiance.

Christmas Eve! There have been other evenings with holidays following them, but Christmas Eve and the day to follow it has a significance that is not attachable to other holidays and the evenings preceding them. There have been Saturday nights and Sundays following them, but on Saturday nights there has been some preparation for the Sabbath, and on the Sabbath there has been some necessary work to accomplish either in the interest of self or for the company. But Christmas Eve! There is but a preparation for a day of nothingness to follow as far as manual labor is in concern. Christmas day in the lumber camps is not desecrated by so much as the shoeing of a horse or the filing of a saw. Its hours are given to all that the day bides for. It is to be devoted to feasting and enjoyment, and is a day on which the woodsman stands on a par with his employer, and certain it is he is enabled by virtue of toil and the fragrance of pine and balsam imbibed by him daily to partake of the viands set before him with a relish unknown to the greatest gourmand that ever lived. His lot it has been to wrestle with the standing timber mid crisp mornings and the clear sunshine of the noontide, and both himself and the noble animal whose services mean so much in the warfare have benefitted to the tune of thoroughly invigorated systems and a further lease on life; and here on Christmas Eve the woodsman's companion, the horse, is not forgotten. A slightly more liberal supply of bedding, perchance a feed of boiled oats or a more careful selection of hay, greets him on his arrival at the stable, while his master, if he be a true lumber woodsman and lumber-woods teamster, wends his way to the bunk house scarcely less grateful at his own cheer than at that of his friend. With the true driver the horse shares in the spirit of the season and the softening of the master's heart finds an outlet in the care of his animal friend.

Breakfast on Christmas morning is much the same as usual, though there is an air of expectancy afoot. Dinner is to be the one great meal of the season, and the cook in his castle lined with building paper and decorated with all the available catalogues and illustrations purloined from the latest illustrated papers, sets himself to the task of doing justice to the battalion under his charge. When the dinner gong sounds the men sit down to roast turkey and goose, generous slices of beef and pork, a plentiful supply of the tenderest vegetables, pastry of all kinds, and last, but not least, in the centre of the long, well-polished table a huge plum pudding capable of supplying the requirements of double the number.

With labor and health whetted appetites what wonder these conscience-clear artisans do a justice to the repast described that would appal a less favored being.

Social and Domestic Arrangements in Camp.

Unless it is an old logging camp at a landing, the ordinary camp is likely to be a temporary affair, built of inch lumber and with a pole frame, says the "American Lumberman" in an article on "River Camp Life." The office may be protected with tar paper against the cold winds of the spring, but this luxury is not always added to the bunkhouse of the ordinary drive camp. This is no hardship, however, as almost any bunkhouse will stand some ventilation. There generally are three buildings—the cook shanty, the bunkhouse and the office. The cook shanty serves as a kitchen, and also is the sleeping chamber of the cook and cookees, if there be two of them. The cookee, needless to say, is the cook's assistant. That worthy gentleman also has the assistance of the "bull cook," who in the city would be called the "fall guy," because all the bad food and bad language are hurled at the head of that unfortunate individual. The bull cook is the hewer of wood and the drawer of water.

Four meals a day are served—breakfast at 4.30 a.m., lunch at 9 a.m., lunch again at 2 p.m., and supper at 7 p.m. The breakfast is selected from the following nourishing items, or may contain all of them:—Pancakes with molasses, oatmeal, raisin or prune stew, fried ham, fried bacon, eggs, bread and oleomargarine, drop cakes, fried cakes, ginger cakes, tea and coffee with condensed milk.

The lunch packer usually carries boiled eggs, cold ham, hot bacon, drop cakes, cookies, fried cakes, fruit cake, bread and oleomargarine, tea and pickles, often with beans and potatoes added.

For supper the following is the customary bill of fare: Beef stew, baking powder biscuit, dressing, raisin stew, beans, corn starch pudding, tea. The three meals include a plentiful supply of all kinds of cakes. Beans never are served more than four times a day in a camp where no more than four meals are served. Yet there is considerable variety and the food is not lacking in quantity. A crew of 40 men will consume in one day 150 eggs, two 14-pound hams, 100 cookies and large quantities of canned goods, such as tomatoes, corn and pumpkin. One day's cooking requires 100 pounds of flour. Into a pudding for 40 men the cook will put 75 eggs and ten quarts of water, besides large quantities of other things, and it is not likely that anything will be left.

There never was a river rat who did not object to the grub furnished him; neither is there often a river rat who has any cause to complain in regard to the food.

The cafeteria of the city has its counterpart in the river camp. The tea is served in one steaming can, into which the men dip their cups. The beans and each other item on the bill of fare are deposited in separate dripping pans. The hungry river driver arms himself with tin plate, tin cup, tin knife, fork and spoon and helps himself, and he is at liberty to eat as much as he pleases. When he has heaped the platter full he generally adjourns to where the bull cook has built a number of fires. As in the logging camps, the meals usually are eaten in silence. The man who attempts to start a conversation generally is greeted by growls and glowering looks.

The social distinction in the camp is conferred by the office. It is there that the walking boss or head push sleeps when in camp. The push boss, or foreman as you choose to call him—"push" will be most readily understood—also has his bunk there. There the clerk sleeps and also the night watchman, if there be one, and any other individual in the crew who can boast a specific title. It is a place where visitors are entertained. It is the only spot in the camp that has any apparent show of exclusiveness.

Over the drive camp, as in other camps, the push reigns supreme. He hardly, however, is more independent than the cook, whose important function of providing four meals a day clothes him in a dignity commensurate with the usefulness of his office. The cook is amenable to the push alone, and in the cook shanty he reigns supreme. Directly under his orders are the cookee and the bull cook. The cookee who is wise works hard and talks little, for of such are the cooks of the future.

"Is the cookee supposed to express an opinion of the cook's cooking?" asked a visitor at camp.

The reply of the cook was characteristic:

"Not unless the opinion is good," he said.

There is always a great rivalry between the culinary departments of neighboring camps as to which shall enjoy the better reputation for the skill of its cooking. Needless to say the matter is never decided. The men at each camp insist that their own cooking is the worst, no matter how good it may be. Kicking on the "chuck" is a pastime that the river rat enjoys as much as his pipe, or a "long five"—the technical name for a five minutes' rest of twenty minutes' duration in a sunny spot on the river afar from the push. Yet the drive serves to bring out in men their best qualities. He who is afraid of cold, exposure, long hours and hard work has no business on the drive, and he will not last long at that business.

THE MACHINERY WORLD

What Manufacturers of Logging, Sawmill and Woodworking Equipment are Doing

An Ingeniously Devised Edger.

The accompanying cut illustrates the Tower 32-inch planing mill edger, manufactured by the Gordon Hollow Blast Grate Company, of Greenville, Mich., who make the Gordon hollow blast grate and the Tower line of edgers and trimmers. While the rear table is not shown, it will be understood that it is included. The saws are shifted by means of racks and pinions actuated by hand-wheels. The pinions are made large, so as to make the saws exceedingly responsive. The company state that one-twenty-fourth of a revolution of the hand-wheel suffices to move the saw one inch. The racks are so located and encased that the company assert they cannot become clogged with sawdust or dirt. They

Tower 32 inch Planing Mill Edger.

also claim that there is no lost motion in the shifting mechanism, which therefore guarantees accurate work.

All of the pulleys, etc., are on one side (whichever may be specified in ordering). The bridge-tree on the other side is removable, to give quick access to the saws without the necessity of disturbing the arbor. The movable guide, the company claim, is the simplest and most accurate yet devised.

The edger is made either with or without a front pressure roll, as may be desired. This roll is hung so as to be as effective as possible. It requires no lever to raise it, and hides the saws very little.

The machine is provided with ingeniously designed double-feed works. To start, stop or change the feed, the company say that all that is necessary is to slip a collar over the feed shaft. Further particulars can be obtained from the company.

A Useful Wood-working Machine.

The Goldie & McCulloch Company, Limited, of Galt, Ont., have recently added to their list of wood working machines one that should be of interest to all concerns that turn out mouldings of any description, flooring, etc. The machine is of the most modern and improved type and is suitable for heavy or light mouldings, all kinds of flooring and

Goldie & McCulloch's New Wood-working Machine.

matching. It has a capacity of 12 inches wide working four sides, six inches deep with three variations of feed.

The cylinders are solid steel forgings and of ample size and strength to handle extra heavy work. The side heads are of steel, $6\frac{1}{2}$ inches in diameter by 6 inches deep, and are slotted on four sides, allowing knives to swing in a 10-inch circle. The spindles are 1 13-16-inch diameter and

run in long non-pinchable bearings. The lower part runs in oil on a bronze step. The heads are adjustable vertically, horizontally and angularly, and when set at an angle can be moved out or in without changing angle. Both heads have instantaneous locking and releasing devices.

The three variations of feed are 20, 40 and 60 feet per minute, which may be changed instantly to suit conditions. The countershaft is separate from the machine. This eliminates the vibration caused by having the countershaft attached to the machine.

The company will be pleased to mail to any address their new illustrated bulletin describing this machine and also their new catalogue of wood tools just from the press.

A Practical Wood-working Vice.

There are few industries which have not some use for one or more vises. Little interest, however, is generally manifested in the common parallel screw vise, because, as a rule, they are so alike in general features of construction. The Canadian Fairbanks Company, Montreal, St. John, Toronto, Vancouver, Calgary, and Winnipeg, are handling an improved patented type of this tool which, they claim, can be instantly thrown and fixed into any required position to suit the convenience of the workman, and with the least possible annoyance.

No single parallel vise, they claim, even though provided with adjustable jaw and swivel bottom, can be adapted to the varied shapes of articles to be held in the positions required for rapidity in shaping, finishing and fitting. "Necessity is the mother of invention," and the necessity for such tools as the Emmert Universal vises prompted them to bring these tools to the attention of the public.

There is hardly a conceivable position, they assert, in which the Emmert Universal woodworkers' vise cannot be placed, and, as they are especially quick in action, they save the time and temper of the operator. This quickness has won for them the nick-name of "The Acrobat"

Emmert Universal Vice.

from the actual users of the vise, which may be considered the highest praise.

The Emmert New Universal Toolmakers' Vise, "The Acme of Success," is their latest innovation in labor-saving devices. The jaws are adapted for holding various work, such as filing and fitting round or finished rings, segments, tapers, etc., and holding them in position for the operator to do the best work and do it most quickly. In short, they claim it is the most efficient vise sold to day. For general straight work the Emmert "Tiger," they claim, holds its own against the field for finish, weight, strength, durability and price.

Better cutting and increased output can be obtained from a planer through simple accessory devices for truing the knives while running. It has been determined, according to the results of recent investigations, that neither the cutter-head speed nor the rate of feed alone determine the output, but that it depends greatly on the perfection of the cutter-head itself. Only where each knife does an equal share of the work can the most cuts be made per inch, and only then is the finish the finest that can be secured at the given rate of feed.

A cutter-head standing at rest cannot be jointed so perfectly that all knives will cut exactly alike when it is run up to speed. When the centrifugal force comes into play, the slightest distortion shows on the surface of the resulting product. It seems to be proven that only when the knives are trued while running can this be overcome. Then they may be made to travel in exactly the same cutting circle.

Other things being equal, the quality of finish is all a matter of the number of knife marks per inch. By accurate truing they may be doubled—the result of making four knives cut instead of two—then, of course, the stock may be fed twice as fast and the original fineness of finish maintained and the quality improved.

WANTED & FOR SALE DEPARTMENT

PUBLISHERS' NOTICE

Advertisements other than "Employment Wanted" will be inserted in this department at the rate of 15 cents per line each insertion, on the basis of 14 lines to an inch, payable in advance. When four or more consecutive insertions are ordered a discount of 25 per cent. will be allowed.

Advertisements of "Employment Wanted" will be inserted at the rate of one cent a word, net. Cash must accompany order.

Advertisements must be received not later than the 10th and 26th of each month to insure insertion in the subsequent issue

WANTED-LUMBER, ETC.

WANTED—200 M. 4/4 AND 6/4 BASSWOOD and Ash, grade common and better and mill cull. Apply Box 573, CANADA LUMBERMAN, Toronto. 2

MAPLE WANTED—750 M. FOR 1909 DELIVERY. Also quantity of Beech and Basswood. Either rail or water shipment. Apply Box 653, CANADA LUMBERMAN, Toronto. 2

Wanted

TWO MILLION FEET TWO INCH HEMLOCK, for immediate delivery. GOLD MEDAL FURNITURE MFG. COMPANY, Limited, Toronto. 2

WANTED—TEN THOUSAND CORDS Hard and Soft Wood; also same quantity of Slabs. SIMCOE WOOD AND LUMBER COMPANY, 24 Adelaide Street West, Toronto. 1

Wanted

QUANTITY OF RED OAK, MILL RUN, mill culls out, inch to three inches thick. Send prices and particulars to ROBERT COX & CO., Hope Building, Ottawa, Ont. 1

Wanted

WANTED TO BUY IN LARGE QUANTITIES Prime round BIRCH LOGS—20" and up diameter, 8 ft. and up, long. Address Box 672 CANADA LUMBERMAN, Toronto. 2

Wanted

ONE TO FIVE MILLION FEET HEMLOCK Logs delivered in boom on Georgian Bay, also Spruce and Pine Logs. Box 662 CANADA LUMBERMAN, Toronto, Ont. 1

Wanted

ABOUT 200,000 OF GOOD, ASSORTED Hardwood Logs, Maple preferred, to be taken out this winter and delivered at any good shipping point on Georgian Bay. Apply, Box 664, CANADA LUMBERMAN, Toronto. 2

Wanted

1" Cull Soft Elm and Basswood, 2 1/2" Maple and Birch C & B, 2", 2 1/2" 3" Rock Elm, C & B. The R. E. KINSMAN LUMBER CO., Limited, Hamilton. 1

Wanted

TANK LUMBER—3 BY 6/7 AND 3 BY 10/12. Lengths 18-24, White Pine. Address ONTARIO WIND ENGINE & PUMP CO., Toronto, Ontario. 7

FOR SALE-LUMBER, ETC.

For Sale

20,000 FEET CHOICE ELM LUMBER, one and two inches thick. Apply to FRED TENNANT, Caintown, Ont. 2

For Sale

2500 CEDAR AND TAMARACK POLES suitable for Piles and Telegraph Poles, 25 to 50 ft. long, and 6 inches and up at top end. THE MUSKOKA WOOD MFG. COY., Huntsville, Ont. 1

For Sale

SIXTEEN MILLION MIXED TIMBER, FIFTY per cent. pine, good proposition for small mill, price twenty-five thousand, close to railway, old license. Apply Box 499, Parry Sound. 2

Rock Elm and White Oak.

WE ARE PREPARED TO CUT TO ORDER a few cars of Rock Elm and White Oak in lengths up to 36 feet. Address MERRITT & CO., Stratford, Ont. 1

For Sale

100' M¹/₂" Log run, Cedar.
20 " 1" Log run, Cedar.
200 " 1" Cull Ash.
200 " 1" Pine Box Strips 12/16.
600 " 1" Pine Mill Culls shorts 6/11.
All 1907 Cut H. BOURGOUIN, Montreal. 1

FOR SALE

3 cars 3" B. Ash C. & B.
3 " 2" Soft Elm C. & B.
Cedar posts cut to order.
2 cars Extras, Cedar Shingles
3 " Clears,
3 " and Clears,
4 " Clear Whites, Shingle
GEO. C. GOODFELLOW, 528 Board of Trade, Montreal. 1

For Sale

1 Car 3 x 4 Merchantable Spruce
1 " 3 x 5 " "
1 " 3 x 6 " "
1 " 3" Refuse and Fourths
A small amount of 3 x 3, 3 x 7 and 3 x 9 and up Spruce Merchantable
No. 1 Spruce Lath 4' x 1 1/2" x 3/4"
SOMERSET VALE LUMBER CO.
Bathurst Village, N.B. 2

Red Pine For Sale

103,000 ft. 1 x 4" and up x 10 ft. and up, Box & Better
100,000 " 2 x 4" x 10 ft. and up, Box & Better
150,000 " 2 x 6" x 10 ft. " " "
86,000 " 2 x 8" x 10 ft. " " "
16,000 " 2 x 10" x 10 ft. " " "
200,000 " 2 x 6" and up, " " "
200,000 " 2" Car flooring, 9 and 18 ft. long
50,000 " 1" and 2" Shorts, 6 to 9 ft. long
Rate to Toronto and Hamilton 1 1/2 cents, Buffalo 1 1/2 cents, Tonawanda 1 1/2 cents, Pembroke 1 1/2 cents, Ottawa 1 1/2 cents, Montreal 1 1/2 cents.
PINE LUMBER CO.,
Pine, Ont. 1

FOR SALE-MACHINERY, ETC.

For Sale

A 15 H. P. ENGINE AND A 25 H. P. Boiler in good running order. Will exchange for lumber, lath, shingles or brick. J. T. ROWE, Aylmer, Ont. 4

FOR SALE

TUBULAR BOILERS

2 72" x 18", 36 6" tubes
4 72" x 18", 70 4" tubes, 125 lbs. pres., Wickes, NEW
4 72" x 16", 70 4" tubes, 125 lbs. pres., Wickes, NEW
2 72" x 16", 64 4" tubes
5 66" x 18", 52 4" tubes, plug hat dome
6 66" x 16", 36 7" tubes, plug hat dome
4 66" x 16", 52 4" tubes, 125 lbs. pres., Wickes, NEW
3 60" x 17", 3", 20 6" tubes, cross dome

For Sale

ONE LOMBARD STEAM LOG HAULER IN fine condition, together with nine sets of logging sleighs, all in fine shape. A trade it taken quickly. Apply to TRACADIE LUMBER COMPANY, Chatham, N.B. 1

Wanted

SMALL SAWMILL OUTFIT, SWAGE AND side dresser for circulars, automatic sharpener for circulars. Box 670 CANADA LUMBERMAN, Toronto. 1

Second Hand Machinery For Sale

One 400 H. P. return tubular internally fired boiler
One 5 1/2 x 3 1/4 x 7 single acting plunger pump
Several first class second hand heaters
One 16 x 20 right hand slide valve engine
One 14 x 18 R. H. Watrous straight line saw mill engine
One 14 x 20 R. H. engine
One 11 x 10 centre crank Watrous engine
Several fly wheel pulleys in stock
One Watrous L. H. Reliance carriage 40" opening
One Wm. Hamilton carriage L. H. 45" opening
One No. 3 friction nigger
One Corey and Baker steam setter
Two No. 1 Watrous double acting set works
One 8 x 12 Cunningham feed

The above machinery has been fully repaired and in first class condition.

Machinery Sales Agents Wanted

UNITED STATES FIRM MANUFACTUR- ing a select line of wood-working barrel and cooperage machinery wants responsible individual or firm to act as Canadian sales agents. Some goods have already been made to large Canadian plants. This is a good opening for a young firm with a good reputation. Address Box 660, CANADA LUMBERMAN, Toronto. 1

For Sale

DUNBAR CLAPBOARD MACHINE AND clap-board planer. These machines are in perfect order and only offered for sale because we cannot keep them constantly running; also one return tubular boiler, used only eight weeks, in perfect order, sixteen feet long, five feet diameter, sixty-six three inch tubes, tested for one hundred and twenty pounds working pressure.

MURRAY & GREGORY, LIMITED,
St. John, N.B. 1

WANTED-MACHINERY, ETC.

Wanted

A SECOND-HAND HEAVY FOUR-SIDED moulder and tenon machine. JOHN McCORMICK, Lawrence, Ont. 1

Wanted

A GOOD SECOND-HAND RATCHET SET Works for heavy carriage. Shaft 2 3/16 di meter. Address MERRITT & Co., Stratford, Ont. 1

WANTED-EMPLOYMENT

Employment Wanted

AS LUMBER SALESMAN, GOOD CON- nection Ontario, Toronto and West. Box 671 CANADA LUMBERMAN, Toronto. 1

Position Wanted

BY A FIRST CLASS BANDSAWYER, 12 years' experience in best steam mills in Eastern Canada. Good mill mechanic and can give A1 references. Address Box 667, CANADA LUMBERMAN, Toronto. 1

Wanted

POSITION BY A PRACTICAL MECHAN- ical Millwright, twenty-three years experience in charge of high capacity modern saw mill machinery. Open to engagement either to build or operate, permanent position favoured. Address 89 Church Avenue, Verdun, P.Q. 4

POSITION WANTED

PRACTICAL LUMBERMAN, FAMILIAR with the work from cruising timber to selling the product open to consider any intelligent proposition on share of profits or other basis, either retail yard or logging and manufacturing. Address Box 613 CANADA LUMBERMAN, Toronto. 1

Position Wanted

PRACTICAL LUMBERMAN FAMILIAR with all branches of the lumber business from stump to consumer, open to undertake position as Manager or Assistant Manager. Address Box 665, CANADA LUMBERMAN, Toronto. 1

Situation Wanted

BY ENERGETIC, CONSERVATIVE AC- countant and lumberman. Twelve years of thorough and detailed experience, from purchase of timber to sale of lumber, including railroad accounting by most approved methods. Will show monthly costs and results of all departments. Now employed by manufacturing company. Box 669 CANADA LUMBERMAN, Toronto 3

Position Wanted

WANTED BY A MAN OF FAMILY 35 years old, whose home is now in Texas, a position of travelling salesman in Western or Eastern Canada, or would take a position as retail yard manager to get started. Has had 15 years experience of sharp competition in Texas and Oklahoma, U.S.A., both retail and wholesale, and understands every branch of the business in this capacity. Would like to come north about 1st of February, 1909. Address H. A. CLEM, care of Clem Lumber Co., San Angelo, Texas, U.S.A. 1

Wanted

POSITION AS STEAM ENGINEER. HAS about fourteen years experience with both stationery and marine and small locomotive and over two years as operator in an electrical power plant of over two thousand h.p. Can produce the best of references. Box 974 CANADA LUMBERMAN, Toronto.

WANTED

POSITION AS MANAGER OF MEDIUM operation or assistant to manager of large enterprise. Have had practical training in Woods, Mill and Office up to general superintendent and know modern methods and conditions from Ontario to interior B.C. Close estimator on costs and am good systematizer. Replying, state salary, limit and living conditions for married man. Address Box 612 CANADA LUMBERMAN, Toronto.

BUSINESS OPPORTUNITIES

WANTED A PARTY WITH THREE TO four thousand dollars, to take active interest in good sawmill proposition. Box 663 CANADA LUMBERMAN, Toronto.

MISCELLANEOUS

I WOULD LIKE TO HEAR FROM MILLS equipped to cut 18" and 20" White Cedar Shingles. Have a good proposition to offer. C. A. LARNED, Phoenix, N.Y.

For Sale

FIVE SQUARE MILES OF TIMBER, situated three miles from Crow's Nest Pass Railway, near Cranbrook, B.C., estimated to contain 22 million feet. Easy logging and down hill roads. Also good saw mill.

Valuable Saw Mill and Manufacturing Site for Sale

Sealed tenders addressed to the undersigned and marked "Tenders Re T.H. DeCew and Son Estate" will be received up to twelve o'clock noon, on the 1st DAY OF FEBRUARY, 1909, for the purchase of the lands, plant, machinery, equipment and other assets hereinafter described of the said "T. H. DeCew and Son Estate."

The Land consists of an excellent mill or manufacturing site in the Town of Bruce Mines, situated right at the terminus of the Bruce Mines and Algoma Railway and in a good harbor, and consists of ten to fifteen acres, surrounded by a twenty three acre water lot.

On this site there is a twenty five thousand feet capacity saw-mill, well equipped with the latest machinery, dry-kiln, machinery for making staves, railway siding, office building, etc. A large quantity of valuable trap rock is located on these lands easy of access, and can be readily shipped to all ports on the Great Lakes.

In connection with the saw-mill and machinery there is a full equipment of sleighs, wagons, trucks, carts, camping outfit, chains, blocks and tools.

One hundred and sixty acres of well timbered lands in the Township of Aberdeen, distant only some eight miles.

To any person wishing to engage in the lumbering business or wooden manufacturing of any kind, these lands and site are particularly desirable, as Bruce Mines is a centre of a large area where for years to come an unlimited supply of pine, pulpwood, hard and soft wood and other timber can be readily obtained.

The site above referred to is especially adapted and suitable for a saw-mill, veneer mill, stave factory, pulp mill or any other kind of wooden manufacture, and is exempt from municipal taxes for about seven years.

Inspection of the property may be had at any time. Terms of Sale:—10 per cent. cash; 40 per cent. within 30 days and balance within 60 days. The tenders must be accompanied by a marked cheque, payable to the undersigned for 10 per cent. of the amount of the tender, which cheque will be returned if tender is not accepted.

The highest or any tender not necessarily accepted. For further particulars write or apply to the undersigned.

Dated at Bruce Mines this 1st day of December, A. D. 1908.

N. H. PETERSON,
Barrister, Solicitor, Etc.,
Bruce Mines, Ontario

Timber and Pulpwood Limit For Sale

THE UNDERSIGNED HAVE FOR SALE a Timber and Pulpwood Limit having an area of 156 square miles, situate on the Coulongue River in the Province of Quebec. This is a very desirable limit and contains large quantities of Spruce pulpwood and Pine. For price and terms apply to THE EAST TEMPLETON LUMBER COMPANY, LIMITED, East Templeton, Que. Canada.

Australia's Paper Imports.

Mr. J. S. Larke, Canadian Trade Commissioner at New Zealand, says in a recent report that the importations of printing paper into Australia show a steady increase, there having been an amount of £18,000 since 1905. The importations from foreign countries were only £2,382 out of the £51,588 imported. The importations from Great Britain have increased from £66,100 in 1905, to £78,938 in 1907. The importations from Canada were very much larger in 1905 than was given in the returns, for undoubtedly, the importations instead of being £18,000 therein were at least £47,000. The increase in 1907 over that of 1905 is, therefore, not so large as the figures would indicate. Still, it is promising. As the paper is now giving satisfaction to users there is every probability that a larger proportion of the trade will fall to Canadian manufacturers.

New Zealand has two paper mills which do the bulk of the trade in wrapping paper, the importations for 1907 having been 9,817 cwts. Of this amount 5,428 cwts. came mainly from Germany. Canada, apparently, contributed nothing. The United States paid a duty of 7s. 6d. per cwt., as against 5s. per cwt. that would be levied upon Canadian paper.

Splendid Spruce Trees.

Mr. A. L. Young, timber cruiser of Victoria, B.C., has been engaged with Mr. Harry E. Hopper, of Indianola, Iowa, in cruising timber in the neighborhood of Queen Charlotte Sound, and in preparing these sections for sale. Mr. Young reports having cut a cross-section of a spruce tree, which was 76 inches in diameter, or 6 feet 4 inches in diameter. This spruce tree was 300 feet in height and produced 21,000 feet of lumber, in boards of one inch in thickness. No less than 60 per cent. of this extraordinary quantity of lumber is clear grade, or clear stock, while the balance, the remaining 40 per cent., is merchantable. Mr. Hopper has purchased many claims in the immediate vicinity of Queen Charlotte Sound, on Rivers Inlet, where an area which is estimated to contain 40,000 acres has been found to cruise 41,000 feet of best to good merchantable timber to the acre. During the past six months Mr. Hopper has purchased over 400,000 acres of good timber land in the Queen Charlotte Sound district at an average cost of about \$5 an acre; which means the payment of the sum of about \$2,000,000 or over.

Forestry in B. C.

At the annual meeting of the British Columbia Timber & Forestry Chamber of Commerce recently Mr. E. P. Bremner, president, congratulated the Provincial Government on its efforts to conserve the forest wealth of British Columbia. He expressed the opinion that the next legislature would amend the Bush Fires Act in order to assist the movement having for its object the prevention of forest fires, which in the past have resulted in the loss of valuable timber areas. A committee entrusted with the task of making various recommendations was appointed. It includes members of the association, the Loggers' and the Lumber & Shingle Manufacturers' Associations. The following officers were elected: Hon. President, William Shannon; President, E. P. Bremner; 1st Vice-President, M. S. Logan; 2nd Vice-President, William Ellis; Secretary-Treasurer, William Clark. The Executive Committee is composed of Messrs. J. McMillan, A. F. Sutherland, F. J. Paterson, E. H. Moore, W. DeBeck, Captain M. M. Garland, Dr. G. E. Davenport, T. Mathews, Lambert Bond and C. N. Dunlevy.

At the Michigan convention in Grand Rapids some points were brought out which may be of value to central station companies attempting to install motors in saw mills and woodworking plants to

replace steam plants using wood refuse for fuel, says the Electrical World. Because of the argument that such wood refuse costs the woodworking plant nothing, it has been difficult for some electric power plants to secure this business. Apparently the value of this refuse has frequently been overlooked by the owner of the woodworking establishment. Mr. William Chandler, of Sault Ste. Marie, said that his company had as a customer a woodworking concern which formerly burned its refuse under its boilers. It now bales these shavings, etc., and sells them, and is operating with electric power, as this is found more profitable than burning the shavings for power. Mr. Crosby, of Detroit, cited the case of a plant which before installing electric power substituted coal under its boilers for refuse, and found that it was more profitable to burn the coal and sell the refuse than to burn the latter, in fact, saving about half the value of the coal. Later the plant took electric service at a still greater saving.

According to the agreement between China and Japan the head of the New Yalu River Timber Company is to be Chinese, with two business managers, one of whom must be Chinese, and all laborers employed by the company in felling and moving timber, including the rafting of logs, must be Chinese.

Review of Current Trade Conditions

Ontario.

Following upon the recent report that the 1909 output of deals of one of the large Ottawa manufacturers had been sold at last year's prices in the English market, comes the report that the whole deal output of the Ottawa valley for next season has been similarly placed, with but a small decline in prices for first quality. This will surely act as a stimulus to the whole lumber industry in the Ottawa valley and should do something to improve matters throughout Ontario. There is a better demand for box lumber from the United States, so that taking it all round, the prospects for next season's trade are already looking bright. An example of the better feeling is afforded by the case of one-inch good pine strips, which are selling at about \$2 per thousand advance. Several lines are selling at small declines, but the general belief is that they will soon stiffen up and follow the lead of those which have already advanced. There has been a very brisk demand for lath and very little is offering, even at \$3.50 for 1½-inch and \$3.25 for 1¼-inch. There has been a great revival in orders for nearly all kinds of lumber, and they are arriving from all quarters, indicating a decided renewal of good business conditions. On account of short stocks it is becoming a problem in some instances to purchase lumber in advance, as manufacturers feel that they will be able to get better prices for new stock in the early spring.

In Central and Western Ontario there is practically nothing to report in the way of business development. Dealers are making an inventory of their stocks and this will keep them busy for a week or two. It is generally expected that when the inventories have been completed, stocks will begin to move, as reports indicate that all over the country retailers are short. With the improved building outlook for the coming spring retailers will be inclined to lay in better stocks, and prospects therefore are quite promising. What little trade is being done is at steady prices.

Eastern Canada.

The most noticeable feature in the lumber trade during the past fortnight in the eastern provinces was the improvement in the price of spruce lath, on account of the increase in the demand from the eastern states. This is an event which occurs annually and has come to be looked forward to. It is even to be expected that this improvement has not gone as far as it will later on. Stocks are quite light and it is expected that as soon as vessels can be obtained they will be cleaned up. Present figures range from \$3.10 per thousand for non-dutiable, and \$2.75 to \$2.85 for dutiable, f.o.b. schooner St. John. In this connection it is noteworthy that during the last two weeks there has been a scarcity of vessels to Boston, New York and Sound ports as a result of the low freight rates which have prevailed throughout the summer and fall. Freight rates have accordingly advanced extensively. It is now a certainty that the quantity of logs cut along the St. John, the Miramichi and Restigouche Rivers will be much smaller than formerly. In fact, it is pretty generally figured at about sixty per cent. of the average.

The demand from the United States is not very large for shingles, and buyers do not expect to do any purchasing until prices are somewhat lower. At Boston the best cedar extras in some cases are offering at \$3.95. Some manufacturers, however, are holding for \$4. Lath are somewhat easier and are offering in Boston at \$4 to \$4.15 for 1½-inch and \$3.25 to \$3.40 for 1¼-inch. There is no improvement to note in spruce and the lack of demand is reported to have caused an easing off in prices. Frames of 9-inch and under are offering at \$26 at Boston, but very few dealers will sell in advance at anything less than this. On account of the mills not being in a position to accept large orders promptly,

it is expected that prices may advance shortly. Random is in good demand with slightly easier quotations. There is quite a good demand for clear spruce from the New York market and prices are remaining firm. Random is also bringing better prices than a month ago.

Western Canada.

Reports from British Columbia indicate a decided improvement in the lumber market. The prices of lumber have been advanced and panic figures no longer prevail. This has been brought about by a great advance in the price of logs. The improvement in lumber was, however, very tardy in arriving. In Vancouver the price of lumber has advanced about \$7 and is still on the upward trend. It is not expected, however, that there will be much improvement in the demand from the prairies until spring has well set in. It is the general belief that by the end of April at the latest both lumber and shingles will show a decided improvement. A factor in the improvement in lumber prices has been the better demand from Australia and Mexico. There is quite an activity in the demand from the Puget Sound country, which also indicates that better times are drawing near. There is a fair amount of business being transacted in timber limits, although many of them are dependent upon the course which will be taken by the United States Government in regard to the alteration of the tariff on lumber. The manufacturers in the interior report that they have had the poorest season on record but they are joining in the belief that an improvement will arrive shortly.

United States.

Generally speaking, there has been very little new business during the past fortnight in any particular line. There is a general belief that the New Year will see a great improvement. There is reported to be a steady buying movement in the country yards. The trade in fir at Chicago has been very quiet with little change expected until the middle of January. There is quite an activity at Chicago in red cedar shingles, which has resulted from the report from the coast that a 25-cent advance is to be made on both clears and stars on Jan. 1st. This has resulted in sales being made at small advances. It is confidently believed that red cedar shingles will bring higher prices early this year than for several years past. White cedar shingles are steady. Prices on cooperage at Chicago have shown some improvement on nearly every line, but no general improvement in the market is expected until early spring. It is expected that there will now be an improvement in the demand for northern pine at Chicago. At New York there is a demand only for the staple stocks, but they are finding a good trade with steady prices and a good outlook. Woodworking plants report that business is improving. There is an especially firm demand in New York for hemlock and the demand at Buffalo has also improved.

Great Britain.

Spruce and white deals have been arriving freely at Liverpool and values have shown a little improvement, especially for scantling sizes, for which there is a good inquiry. Pitch pine planks and lumber are also arriving in fair quantities. The Canadian business has been rather quiet and nothing much was expected until the new year, when it was believed that trade would revive all round. At Hull, business has been quite dull. Deal sizes have been improving in price as it has been discovered that most of the merchants have been carrying lower stocks than usual. One large importer has already raised the price and expects to be able to obtain a further advance during January. At Cardiff all buying is of a hand-to-mouth character but the tone of the market is better.

One serious drawback to the trade at present is the depressed state of the freight market, which has caused the laying-up of a large number of vessels. Only a moderate amount of work is going on at Glasgow. The Quebec and Montreal season is now at an end for another year, and a most uneventful season it has been. The import has been small, comparatively speaking, although it was quite ample except perhaps for Quebec spruce, which was rather too scarce on account of the poor prices. There are at present low stocks in waney pine, ash, birch, spruce deals and low grade pine deals. There are plentiful stocks of best pine deals and sidings and oak and elm logs. Spruce deals are meeting with ready sale and their position has been improved by the recent advance in the price of Riga deals of from five to ten shillings per standard. It is thought quite probable that prices may advance further before long. The best quality broad pine deals are in poor demand. Two recent small shipments which averaged about 16-inch could not be sold from the ship's side, in spite of the fact that such stock is scarce, which goes to indicate that prices are too high. Good 2-inch and 1½-inch pine sidings are scarce and in demand, and the few occasional consignments have been sold without trouble at firm prices. Quebec 3rd and 4th pine deals are rather scarce and there is practically no demand for them.

Market Correspondence

Ottawa Valley Deal Output all Placed.

Ottawa, Dec. 26.—The deal output of the Ottawa valley for the next season has been all placed. Cox & Burstall again bought J. R. Booth's cut, and in nearly every instance the lumber passed into the same hands as the previous year. The only change in price was the slight decline on first quality. The strength maintained by the deal market conformed with the attitude of some of the buyers, who, any time during the past summer would have contracted for a further quantity of deal. The 12-inch market is also firm. These circumstances have the effect of advancing other lines. The only weakness noticeable now is in mill and dead culls, but they too are fast being picked up. With the prospective brisker trade in box lumber with the United States, which promises to develop still more in the new year, manufacturers expect to get good prices for all their ordinary grades of pine that is fit for shipping.

Recent sales of one-inch good pine strips have been made at from \$34 to \$36 per thousand, showing a slight advance. The thicker sorts in this class are commanding a couple of dollars more a thousand than last month, benefitting even more by the firmer tone of the market. The large stocks on hand enable buyers to get a cut of a dollar or two a thousand on shipping cull shorts and strips. The 8 s.c. and better 12 to 16 feet are down to \$24 and 7 up shipping cull sidings are selling at an average of \$23, instead of \$25. Pine shipping cull strips are offered at \$19 and range up to \$22, a drop of a couple of dollars. The manufacturers, however, are of the opinion that the weak lines of the present day will be equal in demand to the others after this month. Mr. C. Jackson Booth told the "Canada Lumberman" that he looked for no change in quotations till then.

Two of the largest manufacturers of Ottawa are completely sold out of lath. In consequence dealers are looking for No. 1 white pine and are unable to get it at \$3 a thousand. The ruling quotations appear to be \$3.25 for 1¼-inch and \$3.50 for 1½-inch. In other sorts small advances are noted in sympathy with the brisk demand for the superior brand.

Some of the Ottawa valley manufacturers have found that a new line of lumber in the class of shipping cull and betters, clears out, meets requirements so well that a large quantity of it has been sawn. Seven different varieties are made out of the small logs which formerly were all thrown in together. The sizes range from 1x4 up to 1x10, and the prices starting at \$20 to \$21, vary according to width up to \$26 to \$28. The new method of sorting is reported on favorably by purchasers, who used to complain of great inconvenience and waste in buying lumber of irregular widths all included in one class.

A few mill owners are not busy shipping, but orders are pouring into others, which indicate a genuine revival of trade. The sales are usually small but their frequency, together with the numerous inquiries, show that stock is light at points of consumption. It is more difficult to buy lumber in advance now than a few months ago. The manufacturers are of the opinion that they stand to gain by selling the new cut in March rather than now. The outlook for 1909 is therefore better for the one to two-inch lumber than the deals, though they have produced prices not unsatisfactory to the manufacturers.

The building prospects give assurances of a better demand for Ottawa Valley lumber in all localities that it reaches. Last year it was difficult to borrow more than half the value of a prospective building. If the money can be raised easily there will be considerable building next season in Ottawa to meet the almost unprecedented demand for dwellings. The rents are excessive and the lumbermen see in the situation a possibility for very heavy local consumption of their product.

The water power situation has improved slightly during the last few

days, with the result that J. R. Booth is able to operate part of his pulp mill for the first time in two months. The mill was beyond the help of the auxiliary plants, which were used in the emergency by the E. B. Eddy Company and other manufacturers. Still the water supply at Booth's is far from adequate and the Ottawa lumber and paper king is buying most of the ground pulp needed for his paper mill.

The heavy snows of the past week helped to relieve a situation in the shanties which was seriously retarding the winter's work. The hauling of logs is beginning in earnest since enough snow came to make good roads. In some years, this period of the season's operations was the occasion for engaging more men, but the present is an exception. The only extra activity is the despatching of a few additional teams. Men who went away to the woods on the chance of being hired had to return disappointed.

Freight and Tonnage Scarce at St. John.

St. John, N.B., Dec. 24.—The most interesting feature of the lumber trade during the past fortnight has been the scarcity of tonnage for freighting purposes to Boston, New York and Sound ports. The very low freight rates which prevailed during the past summer and early fall have been the cause of most of the schooners going into winter quarters earlier than usual, and the result is that it has been hard to make charters during the past fortnight or three weeks. Another cause of this scarcity of tonnage is that a number of the lumber freighting fleet have been recently wrecked. Freight rates by schooners to New England ports have jumped amazingly. Where \$2 on long lumber to Boston was asked a few weeks ago, \$2.50 has been paid during the last week, and it is asserted that charters have been made as high as \$2.75 per thousand.

Logging conditions in the woods and the prospects in that regard are uppermost in the minds of the New Brunswick manufacturers at present, and will continue so for many weeks to come. So far the conditions for getting logs have been very favorable throughout the province. While there is ample snow upon the ground there is not too great a quantity, which condition would be a serious and expensive obstacle. The weather throughout the present month has been uniformly frosty and the ground has been frozen hard, so that teams can work to great advantage. The curtailment in the volume of the winter's cut of logs along the St. John River and its tributaries, as mentioned in earlier letters, is paralleled by conditions on the Restigouche and on the Miramichi Rivers.

At the annual meeting of the Wm. Richards Company of Campbellton, held a few days ago, it was stated that the company's logging operations during the present winter will be about forty per cent. below the average. The cut of the Shives Lumber Company, of the same town, will also be somewhat curtailed; their total quantity will probably not exceed twenty millions of feet. The usual cut on the Restigouche River is between sixty and seventy millions of feet. This year, with the best possible conditions, the total cut will not exceed forty millions of feet.

There has been little to report in the way of fluctuations in market prices. Transactions of importance are few and, in spruce deals for export, trade is remarkably quiet. Shipments of spruce deals by the winter liners to Great Britain have been so far remarkably light.

The feature of the fortnight, so far as prices are concerned, has been a decided stiffening in the price of spruce lath, due directly to a decided increase in the demand for this line of goods in the principal distributing centres of the Eastern States. The present stimulation is in line with the history of the lath trade for a number of years past, and it has grown to be an expected event, this boost in the value in the late fall or early winter. One reason is that, with any increase in the demand for lumber generally, stocks of lath are absorbed much more rapidly than is the case with long lumber, hence a scarcity is always much more imminent in the case of lath than in the case of deals, boards and scantling. Under the circumstances, it would not be remarkable to see a further gain in values in this line in the near future. As far as can be learned there are only nominal stocks—and in many cases less than nominal—of spruce lath throughout the provinces. Speaking of this section in particular, local holdings are probably about as usual at this time of year. The quantity would range from five and one-half to six millions, the much greater part of which are the dutiable article. As only three mills are running, these stocks will no doubt be rapidly shipped and cleaned up as soon as tonnage is obtainable.

An enquirer would be quoted from \$3 to \$3.10 per thousand on the non-dutiable article and from \$2.75 to \$2.85 on the dutiable lath, f.o.b. schooner at St. John.

The present municipal campaign in Ottawa is marked by an agitation to get rid of some lumber piles permitted in one of the wards. The residents claim the lumber is a menace on account of the possibility of fire breaking out.

The Customs authorities at Portland, Me., are on the lookout for the laths from the bark "Shawmut" which was wrecked near that place a few weeks ago. The laths were shipped at St. John, the cargo consisting of two millions. The duty is 25c. per thousand.

EDGINGS

Ontario

The capital stock of the Canadian Logging Tool Company has been increased by letters patent from the sum of \$15,000 to the sum of \$40,000.

The Freeman Lumber Company, Limited, Midland, Ont., has been incorporated with a capital of \$40,000. J. Hill, F. G. Hill, J. W. Demorest and others, all of Midland, are the incorporators.

The Charters Lumber Company, Limited, of East Toronto, Ont., has been incorporated with a capital of \$100,000. The incorporators are W. C. Charters, S. L. Slade, R. P. Allen and others, all of East Toronto.

The Rosedale Sawmill Company, Limited, of Toronto, Ont., has been incorporated with a capital of \$40,000. The incorporators are T. H. Hancock, F. H. Hurlburt, Edmund Gunn and others, all of Toronto.

Fire recently destroyed the building, machinery and part of the materials of the Dansville Paper Mills, Dansville, N.Y., causing a total loss estimated at more than \$100,000. The plant was owned by J. H. McNairn, of Toronto.

The Taplin Timber Company, Limited, of Toronto, Ont., has been incorporated with a capital of \$40,000. The incorporators are V. E. Taplin, of New Liskeard, Ont., and W. R. Smyth, M. Peer, and J. P. Langley, of Toronto.

The Golden Lake Lumber Company, Limited, Eganville, Ont., has been incorporated with a capital of \$75,000. Incorporators, M. J. O'Brien and J. A. O'Brien, Renfrew, Ont.; J. D. McRae, G. D. McRae and R. C. McRae, all of Eganville.

The Colonial Wood Products Company, of Niagara Falls, N.Y., have purchased twenty acres of land in Thorold, Ont., for a factory site, and will begin the erection of a pulp mill. The council will submit to the ratepayers a by-law to grant the concern a fixed assessment of \$2,500 for ten years and certain water and light privileges.

Owing to the refusal of the proprietors of the two pulp mills already in operation at Thorold, Ont., to give their consent, which is necessary to the proposed by-law giving the new pulp mill being erected by United States capital, free electric light, reduced assessment and free fire protection, the new industry will have to get along without assistance from the town.

Joseph Frost, of Kenora, Ont., had a terrible experience with two timber wolves last month near Garwood. He was returning from the bush, where he had been cutting, and was armed only with an axe, when two large wolves sprang at him. Using his axe freely he managed to keep the animals at bay for a few minutes, and just when the battle seemed hopeless a freight train passed and the animals ran into the bush. The man's torn clothes and bloody axe showed the terrible experience he had been through. Owing to the scarcity of rabbits, wolves this winter are very bold, and appear more numerous than for several years past.

The City of Toronto has awarded to Reid & Company and Arthur Bryce contracts for the annual supply of lumber for bridges and wharves. Following are details: Reid & Company, 1-inch pine lumber per 1,000 feet, B.M., \$22.73; hemlock lumber, 1-inch \$18.77; 2-inch, \$18.77; 3-inch \$18.77; curbing, pine, 4-inch x 10-inch, \$25.77; white cedar, 4-inch x 10-inch, \$21.77; scantling, pine, 4-inch x 4-inch, \$22.53; cedar, 4-inch x 4-inch, \$18.77; pine timbers, 16-inch x 16-inch, 16 feet long, \$32.79; 12-inch x 12-inch, 24 feet long, \$33.79; hemlock timbers, 12-inch x 12-inch, 12 feet long, \$21.79; 12-inch x 12-inch, 16 feet long, \$21.79; 16-inch x 16-inch, 16 feet long, \$26.79; 12-inch x 12-inch, 20 feet long, \$27.79; 12-inch x 12-inch, 24 feet long, \$28.79; 16-inch x 16-inch, 24 feet long, \$38.79. Arthur Bryce, 2-inch pine lumber, per 1,000 feet, B.M., \$23; 3-inch pine lumber, \$24.43; pine timbers, 12-inch x 12-inch 12 feet long, \$28; 12-inch x 12-inch, 16 feet long, \$28; 12-inch x 12-inch, 20 feet long, \$30; 16-inch x 16-inch, 24 feet long, \$42. Reid & Company were the sole tenderers for the supply of cedar paving posts.

Eastern Provinces

The woodworking factory of T. A. Barnhill & Company at Bellmont, N.S., was destroyed by fire last month at a loss of \$6,000.

At the annual meeting of the William Richards Lumber Company, Fredericton, N.B., H. H. Gunter, J. Howard Richards and David Richards were elected directors. H. H. Gunter was re-elected president and J. Howard Richards secretary-treasurer. The company operate in Restigouche.

The visit of the Mann Congressional Committee to Quebec centres has aroused new interest in the question of future lumbering relations between Canada and the United States. Mr. Mann and his committee have been touring Canada for the purpose of securing information regarding the lumber supply of the United States.

At a Cabinet meeting of the Provincial Government held in Montreal the question of establishing a forestry school was taken up and it was decided to introduce a bill to provide for one at the next session of the Legislature. Already two members of the staff have been engaged and are pursuing studies in European universities.

A Montreal despatch states that lumber trade conditions in this vicinity have improved somewhat during the last few weeks. However, lumber exports from this port for 1908 show a decrease of almost 1,000,000 feet, board measure. In 1907 the amount exported was 96,260,794 feet and 95,307,754 feet in 1908, showing a decrease of 953,220 feet.

John Keefe and A. P. Barnhill, of St. John, N.B., have been appointed a commission by the Dominion Government to investigate the matter of boom obstructions on the upper portion of the St. John River, which have been the cause of clashing between Canadian and American lumbermen. The American Government has also appointed a commission.

Quebec lumbermen are complaining of the low water which has handicapped them in their work. In many cases supplies of pulpwood coming to the mills have been stranded in the river beds and the owners have been compelled to resort to teams and waggons to haul it to their mills. The question of storage reservoirs is receiving more attention and it is felt that the Government will soon be compelled to adopt some measures for the regulation and conservation of the water supply. In the Ottawa River a difference of nearly 36 feet exists between the height of water now and the height last spring.

The Eagle Lumber Company, Limited, of Montreal, Que., has been incorporated with a capital of \$20,000. The incorporators are L. Villeneuve, of Quebec, Que.; and A. Beaupre, V. Martineau and Patrick Murphy, of Montreal.

The Rhodes-Curry Company, car builders of Amherst, N.S., recently closed a contract with the Canadian Northern for 1,000 box cars and a number of passenger cars for the same road. This contract is sufficient to keep the plant of the company at Amherst running for several months.

Western Canada

Recent British Columbia incorporations include: Heaps Timber Company, capital, \$1,000,00, and the Tidewater Lumber Company, capital \$100,000.

The Winnipeg Board of Control have recommended for acceptance T. D. Robinson & Sons' tender for the supply of 1,500,000 feet of lumber, their tender being the lowest received.

The logging operations of the International Timber Company, Vancouver, B.C., on the Campbell River have ceased until the damage done during the recent floods can be repaired.

W. T. Fannell, shingle manufacturer, of North Vancouver, was thrown out of his rig while driving, the horse becoming unmanageable. He escaped the horse's heels, but the buggy was reduced to splinters.

The sawmill of the Trail Lumber Company, at Paulson, B.C., is running full capacity. This is a new and modern plant. Sufficient large contracts have been entered into and orders received to assure the success of the company.

John Lineham, who owns mills at Okotoks and High River, Western Alberta, is completing his contract for 10,000 ties for Grand Trunk Pacific delivery. Both his High River and Sheep Creek camps are in operation this winter.

Alderman Gray, of New Westminster, B.C., states that if a start is made at once with the new bridge in that city one of the largest box factory businesses will establish a plant on Lulu Island, as well as other prospective industries.

Plans are being prepared for the erection of a match factory at Selkirk, Man., to employ fifty hands at the outset. The officers of the company are: R. C. Moody, president; Dr. Ross, vice-president, and J. Manton, managing director. The concern is capitalized at \$40,000.

The British ship "Lord Shaftesbury" has been taken to load lumber at a British Columbia port for Sydney at 28s. 2d., which is a reduction of 1s. 9d. from the last figure taken by a sailing vessel for that voyage. That was the British barque "Sardhana," although steamers have since accepted 27s. 6d.

The sale of 1,500,000 feet of logs, belonging to the British Columbia Tie & Timber Company, and now at their sawmill at Seal Harbor, near Prince Rupert, has been postponed as the property was seized by a deputy sheriff on a writ for wages, executed by Japanese. The British Columbian Government also has a claim for stumpage.

The Crow's Nest Lumber Company, while its mill at Wardner, B.C., is still working, has posted notices stating that all men employed after Nov. 1, 1908, are to sign a contract to the effect that no money would be paid as wages until May 1, 1909, as it is only on that condition that the mill and the camps could go on for the winter months.

A singular accident occurred at the mill of the Bowman Lumber Company, Revelstoke, B.C., last month. The governor on the engine failed to work, causing the engine to speed up rapidly. This caused the big flywheel and heavy pulleys to burst, causing considerable damage to the machinery and resulting in the shutting down of the plant.

J. S. Emerson, Vancouver, says that the export of cedar cleaned the market of logs, and his mill at Port Moody is temporarily shut down until a supply arrives from the north. This was delayed, owing to storms. He has plenty of orders on hand. Although these logs were cut for his own use, he declares it is a fact that cedar is scarce even on the northern coast.

Some of the prominent loggers of Vancouver and district are criticizing the action of the Fraser River Lumber Company, which has a very large plant at Millside, on the Fraser River. Six new camps have been opened at Vancouver to supply logs for the mill, and under present conditions it is felt that this is only slashing the timber, without proper appreciation of the situation.

A young man named Fred Anderson was instantly killed last month while loading logs at the Wood-McNab mill at Fernie, B.C. He was engaged in rolling a log up a skidway when his canthook slipped and caused the log to roll on him, breaking his neck. Life was extinct when he was picked up. The body was taken east to his home in Campbelltown, N.B., where his parents reside. It was his intention to spend Christmas at home.

The Victoria Lumber & Manufacturing Company are operating their mill at Chemainus, B.C., twelve hours a day having considerable foreign as well as domestic business on hand. The British barque "Inverclyde" loaded for South Africa, and the British ship "Ditton" for Adelaide, South Australia. About the first of this month the Alley liner will take 700,000 feet of lumber to New Zealand. This company have completed the installation of a new blower system in their planing mill to convey the shavings and sawdust to the boiler fires.

Several tons of logs, which are reported to have been sold to American mill men prior to the prohibition of export, failed to get across the line owing to bad weather, and the Provincial Government has at least one tug patrolling the eastern coast of Vancouver Island on the lookout for booms. It is reported that it is the intention of the Government to place a patrol boat in service between Vancouver and Blaine so that no log smuggling can occur. So far as can be learned it is not known that any logs have been taken across the border lately, but for some time, at least, the Government agents will be on the alert to prevent illegal export.

Between seventy and eighty business men of New Westminster, B.C., representing the City Council and Board of Trade, recently visited the plant of the Fraser River Lumber Company, being the guests of the management. The occasion of the visit was auspicious, inasmuch as it marked the resumption of foreign export business, the barque "Ivanhoe" having arrived at the mill earlier in the day to load for Chile. The "Ivanhoe" is the first of a fleet of lumber carriers that has been chartered to load at the big mill at the rate of two a month. Mayor Keary, President Cunningham and Secretary A. E. White, of the Board of Trade, headed the delegation of civic visitors. They were received at the mill by A. D. McRae, managing director; W. S. Rogers, R. L. Craig and H. J. Machin. These gentlemen personally conducted the party over the big plant, and in the course of the tour of inspection gave much interesting information.

The Old Reliable

Gordon Hollow Blast Grate

BURNS SAWDUST FROM FROZEN LOGS,
RIGHT OUT OF THE WATER.

GIVES AS GOOD RESULTS WITH WET, GREEN OR FROZEN
SAWDUST AS A DRAFT GRATE GIVES WITH DRY WOOD.
INCREASES THE EFFICIENCY OF A BOILER FROM 25 TO 50%.

6,000 SETS IN USE.

OVER 500 VOLUNTARY TESTIMONIALS.

Saves labor in firing.—Lasts forever. Only expense first cost.—
Equally efficiency in ordinary furnaces or Dutch ovens.—Adapted for any
number of boilers from one up.—No change in construction necessary.
A hole must be made through each wall, for the pipe; aside from this,
not a brick need be disturbed.—The largest outfit can be installed between
quitting time Saturday and starting up time Monday morning. No
difficulty about maintaining a fire all night, when the blower is idle, and
no objection to so doing.

Sample Testimonial:

"We are using FROZEN LOGS RIGHT OUT OF THE POND,
WITH ICE HANGING ALL OVER THEM, and have no trouble to
burn the dust and wood." Kilgore & Thomas, Tip Top, Va.

SOLD ON APPROVAL.

THIRTY DAYS' TRIAL GIVEN.

In case of rejection.

Sole Manufacturers of the Celebrated
Patented

Dunbar Shingle Machine

Universally admitted to be the
BEST SHINGLE MACHINE
made

THESE Machines are used all over Canada and can be used in all kinds of lumber (large or small). We have been manufacturing these machines for over twenty years and have been improving on them from time to time. For compactness and durability it leads them all, being 500 lbs. heavier than any other machine on the market. It is built to run and work in any kind of lumber or in any country and will produce more and better shingles from the same stock than any shingle machine made. All high speed arbors of highest grade polished steel running in ring oiling boxes, something that no other machine in the market has at the present time doing away with all hot boxes. Improved adjustment on Leatherboard friction and many other strong features. We also manufacture a machine similar to the above cut that can be adjusted to cut box wood as well as shingles from 14 inches to 22 inches in length. We also manufacture complete line of Shingle Mill Machinery and Casting of every description. Over 1,000 now in use by the largest mill owners in Canada.

—Read what some of them have to say—

McFARLANE, T. & ANDERSON MFG. CO., Fredericton, N. B.
Gentlemen:—

Price, Que., Aug. 27, 1908.

We have received yours of the 26th and in reply would say that we are glad to have an opportunity of expressing to you our opinion of the merits of your patented Dunbar Shingle Machines which we have purchased from you. We hereby bear our testimony that we have never used nor seen in operation any other shingle machine; which embodied so many good points as the sixteen machines that you built for us in 1902. These were built, at our suggestion, with a countershaft to run the jointer saw, which we found was a notable improvement on the friction device, and we understand you have since adopted the use of the countershaft principle for the operation of the jointer saw. The machines that you build are extra strong, well proportioned, and our experience with them has convinced us that with due care they are economical and will do a great deal of work at a minimum of cost for REPAIRS.

We remain, yours truly,
METIS LUMBER CO.,
per WM. SEALE.

MESSRS. McFARLANE, THOMPSON & ANDERSON MFG. CO., Fredericton, N.B.
Dear Sirs:—

Salmon Lake, Que., Aug. 15, 1908.

Your letter of the 11th inst. to hand and would say that we have duly received the 4" Grooved Friction Pulleys ordered from your firm for our 7 Dunbar Shingle Machines.

We might say that with the exception of having had to renew the above frictions we have had no trouble with the 7 Dunbar Shingle Machines purchased from you in 1905, our machines running continuously night and day throughout the sawing season,

Truly yours,
PRICE BROS. & CO., LTD.

"QUALITY IS THE BEST POLICY"

of good lumber is a good deal like a short preacher. You can't always see "it," but it is there just the same. And that leads us to remind you that if present indications point to anything it is that there is going to be a short supply of good lumber in many kinds of stock between now and Spring. We've seen it coming and we're fixed for it, and would like to help fix you up on stocks for your Spring wants by sending you in a car or two of our silk finish No. 2 Quebec Spruce and our New Brunswick White Cedar Shingles. Both of these products

are manufactured under our personal supervision from our own timber lands and mills, and are put up to suit the most critical trade. They will win and keep your customers and make you a permanent customer of ours, if you will only give them a trial.

Our plant in the Province of Quebec is one of the most modern and complete mills manufacturing Canadian Spruce and New Brunswick Cedar Shingles.

We aim to carry at all times a full stock in all sizes, and can furnish, dressed in any desired way, on short notice.

No. 2 Quebec Spruce and White Cedar Shingles

This Spruce is a small tight knotted grade, and when worked in the characteristic Fenderson "silk finish" style, there is nothing on the market that can beat it.

LARGEST AND BEST ASSORTED STOCK OF DRY SPRUCE IN CANADA

Reliable Veterinary Remedies

No logging outfit is complete without a supply of reliable veterinary remedies. Getting the wrong kind means the loss of the use of your horses when time is valuable.

Johnson's Veterinary Remedies are guaranteed never to fail when used as directed. You get your money back if they ever do.

They are
Johnson's Horse Liniment No. 1.
A penetrating Alcoholic Liniment.
Put up in one gallon jugs, with full directions, per imperial gal. \$4.50

Johnson's Horse Liniment No. 2.
A combination of the best oils used as liniments, imp gallon . \$3.00

Johnson's Horse Colic Remedy.
A sure and speedy cure for colic
Imperial gallon \$5.00

Johnson's Veterinary Healing Ointment.

Positively the best all-round healing ointment made. In use by the largest owners of horse flesh in Canada.
Put up in 2 lb tins, each . . . \$2.25
or in 1/2 lb tins, per dozen . . \$3.50

Johnson's Condition Powders. (Concentrated).

Put up in bulk, per lb 30c.
These goods being put up in bulk are more economical than others, as cost of bottling, etc., is saved.

CAMP REMEDIES.

In addition to our Veterinary Remedies we make a line of medicines for lumbermen, including a strong, penetrating liniment, healing ointment, cholera cure, liver pills, cough syrup, in fact anything in the form of Camp Drug Supplies. We know that there are no better remedies made than those we offer. There may be others nearly as good, but they lack our guarantee. Satisfaction or money back. A trade discount of 10% allowed off all orders amounting to \$100.

Send postal for printed matter.

There are more DISSTON BRAND Band and Circular Saws used than any other make, and by a large majority.

WHY?

Because millmen and sawyers recognize by the use of the DISSTON SAWS they obtain the greatest results for the least cost.

WE MAKE THIS STATEMENT WITHOUT FEAR OF SUCCESSFUL CONTRADICTION.

POINTS OF MERIT

**MATERIAL
HARDENING
AND
TEMPERING**

FINEST
CRUCIBLE STEEL

DISSTON
METHOD

UNIFORMITY.
TOUGHNESS.
GREATEST TENSILE STRENGTH AND ELASTICITY.

GRINDING

DISSTON
METHOD

Being Manufacturers of our own steel, and thoroughly familiar with its makeup, we are able to absolutely adjust the hardening and tempering processes to the degree giving that perfect combination of hardness and toughness that produces the "edge, tension-holding and standing up qualities" for which the DISSTON SAWS are renowned.

TENSIONING

DISSTON
METHOD

By the DISSTON METHOD all Band Saws are ground perfectly flat and uniform in thickness, thus making possible a very close adjustment of the guides without creating any friction or heat when in operation at the highest rate of feed; and all Circular Saws, whether tapered or of even thickness, are perfectly flat ground on the surface, thus insuring in all saws perfect clearance and true balance.

The uniformity of the material, temper and grinding is a large factor in the proper adjustment of tension; and this, together with the Disston process of tensioning, is the reason why the DISSTON SAWS will manufacture more lumber, under the same conditions, than any other brand of saw.

In the DISSTON BRAND of SAWS you have the advantages of the product of a progressive, up-to-date saw factory, the LARGEST IN THE WORLD, and where saws are made throughout, from the making of the steel itself—the superiority of which has been demonstrated for the past fifty-three years—to the finishing operation, and each process is performed by mechanics of long experience and highest order of skill.

DeLoach "Prince" Hand Feed Shingle Mill

JOHN H. CRANE
Manufacturer of Lumber and Shingles
DELOACH MILL MFG. CO., BRIDGEPORT, ALA. MONTEREY, ALA., JULY 2, 1907.

GENTLEMEN,—I purchased from you in 1905 a "Prince" hand feed shingle machine. I have operated it and find it all you claim for it. We cut at the rate of 30,000 shingles in 10 hours and made first class shingles. I consider your machine a very light running machine. If I wanted another hand machine I would certainly buy a DeLoach Prince.

With best wishes for your success, I am

Yours very truly,
JOHN H. CRANE.

Send for Catalogue of Engines, Boilers, Gasoline Engines, Saw Mills, Shingle Mills, Planers, Gang Edgers, Lath Mills, Grinding Mills, Water Wheels, Etc. Complete Circular and Band Mill Equipment.

PETERBORO SAW MILLS

"Hamilton" Lath Mill

This is the mill that cut over 17,000 pieces of Lath in one hour, a short time ago.

We guarantee a capacity of 60,000 Lath per day.

The frame is all of iron, heavy, rigid and strongly braced.

The table is extra wide so that any unfinished bolts can be passed back to sawyer.

It carries six 14 in. saws.

We build a complete line of Lath Mill Machinery to suit any requirements. Get our special catalogue.

Let us quote you on anything you need

Edgers

Our Garland Gang Edgers are made in all widths, with any number of saws to suit requirements.

They work in all kinds of timber.

Like all our machinery they are strong and durable, specially built for fast and accurate cutting.

We have a special catalog of Edgers, too. May we send it to you.

CAPACITY 40,000,000

New York City
Guy E. Robinson, 1123 Broadway

A word to the Trade about Hot Air, 3,000,000 a day shingle advertisements

The FULL daily capacity of the 200 shingle machines in British Columbia is 4,000,000 shingles. On an average during the months of operation about ten per cent or more of these machines are idle; and it is also well within the truth to state that almost the WHOLE Shingle Industry of the Province is closed down tight from three to four months during every year; and the local consumption of shingles in the Coast cities and towns—about 300,000 per day, must be deducted from the rail shipping capacity; also as shingles are now being marketed, it is safe to state that fully one-third of the out-put will be sold by manufacturers DIRECT to the retail trade. The net result of the above is about 2,200,000 B.C. Shingles per day available for rail shipment, and to be divided amongst ALL the brokers and wholesalers in Canada and the United States who handle our shingles. From the above facts, Lumber Dealers can judge for themselves as to how much truth there is in an advertisement which states a SHIPPING CAPACITY of 3,000,000 shingles daily.

We are the OLDEST established strictly Wholesale Lumber Dealers in British Columbia, and are in a position to supply the Trade with their lumber and shingle requirements.

Sole Manufacturers of the Celebrated
Patented

Dunbar Shingle Machine

Universally admitted to be the
BEST SHINGLE MACHINE
made

THESE Machines are used all over Canada and can be used in all kinds of lumber (large or small). We have been manufacturing these machines for over twenty years and have been improving on them from time to time. For compactness and durability it leads them all, being 500 lbs. heavier than any other machine on the market. It is built to run and work in any kind of lumber or in any country and will produce more and better shingles from the same stock than any shingle machine made. All high speed arbors of highest grade polished steel running in ring oiling boxes, something that no other machine in the market has at the present time doing away with all hot boxes. Improved adjustment on Leatherboard friction and many other strong features. We also manufacture a machine similar to the above cut that can be adjusted to cut box wood as well as shingles from 14 inches to 22 inches in length. We also manufacture complete line of Shingle Mill Machinery and Casting of every description. Over 1,000 now in use by the largest mill owners in Canada.

—Read what some of them have to say—

McFARLANE, T. & ANDERSON MFG. CO., Fredericton, N. B.
Gentlemen :—

Price, Que., Aug. 27, 1908.

We have received yours of the 26th and in reply would say that we are glad to have an opportunity of expressing to you our opinion of the merits of your patented Dunbar Shingle Machines which we have purchased from you. We hereby bear our testimony that we have never used nor seen in operation any other shingle machines which embodied so many good points as the sixteen machines that you built for us in 1902. These were built, at our suggestion, with a countershaft to run the jointer saw, which we found was a notable improvement on the friction device, and we understand you have since adopted the use of the countershaft principle for the operation of the jointer saw. The machines that you build are extra strong, well proportioned, and our experience with them has convinced us that with due care they are economical and will do a great deal of work at a minimum of cost for REPAIRS.

We remain, yours truly,
METIS LUMBER CO.,
per WM. SEALE.

MESSRS. McFARLANE, THOMPSON & ANDERSON MFG. CO., Fredericton, N.B.
Dear Sirs :—

Salmon Lake, Que., Aug. 15, 1908.

Your letter of the 11th inst. to hand and would say that we have duly received the 4" Grooved Friction Pulleys ordered from your firm for our 7 Dunbar Shingle Machines.

We might say that with the exception of having had to renew the above frictions we have had no trouble with the 7 Dunbar Shingle Machines purchased from you in 1903, our machines running continuously night and day throughout the sawing season,

Truly yours,
PRICE BROS. & CO., LTD.

SIMONDS

Crescent-Ground Cross-Cut Saws

This is the identical Crescent-Ground Cross-Cut Saw which has for years been recognized as the best made or used in the United States. Since beginning the manufacture of these saws at our Canadian factories, we have found and are supplying a greatly increased demand throughout the Dominion. The Saws are made of Simonds Steel, and Simonds Steel is the best saw steel made. They run easy, cut fast and give good results. Sold by the hardware trade or direct from our offices.

Every Saw Covered by an Absolute Guarantee

We are Specialists on Lumber and Saw Mill INSURANCE

FOR OVER THIRTY YEARS we have made a close and constant study of this specialty, embracing not only "The Best Protection at the Minimum Cost" in the sense of Policies in the Strongest Companies at the lowest possible rates, but the enhanced Protection of such Policies so worded as to Insure you under whatever form of sale or undertaking you may make with your customers, unaware as you may be of the application of the Canadian Insurance Law in such instances.

We invite inquiry as to the above and our "ADVICE SHEET" system which we originated several years ago for the special convenience of our Lumber Customers.

We personally inspect each of the plants we insure at least twice a year.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Special care is taken to secure for publication the latest and most trustworthy market quotations throughout the world, so as to afford to the trade at home and abroad information on which it can rely in its operations.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

No. 2

Uniformity of Grading Needed

Suggestions frequently reach the "Canada Lumberman and Woodworker" that steps should be taken to bring about an improvement in the methods prevailing for the grading of lumber. The lack of uniformity has been a great drawback to the trade, and at present there seems to be little prospect of a change. This is one of the matters which make the recent formation of a Canadian Lumbermen's Association of much importance. If anyone can bring about an improvement in this direction the association should be able. If they receive the support of the trade in general in their work, they can undertake a reform of this nature with a feeling that they can accomplish something.

There are undoubtedly very serious obstacles in the way of accomplishing any results in the matter of more uniform grading. The local conditions and variations in quality, to say nothing of the differences of opinion of cullers, would seem to make it almost impossible to arrive at a standard which would be acceptable to everyone. Indeed, some instances have been known where the same culler has culled precisely the same lumber in a different way; that is to say, his inspection of a parcel of lumber at its destination was different from that which he put on it at the point of shipment. Then again those in the trade know pretty well what grades they are going to get when they are buying from the different mill-men.

It is easily seen, therefore, that there are very great objections to any proposal for bringing about uniformity of grading, not the least of which is the universal difficulty in upsetting existing conditions, even though a suggested change might be acknowledged all round as a desirable thing. There is, however, just on account of these difficulties and their peculiar nature, all the more reason for attempting a solution. The existence of peculiar local conditions should be a matter which could be

overcome both by persistent effort and by natural forces. As to the different manner in which the same person may at different times cull the same lumber, this is a strong argument in favor of attempting to introduce a change which will do away as much as possible with the personal element. It may be a visionary scheme, but it is a vision which a great many lumbermen have indulged in from time to time, and there are many of them who could be counted upon to assist any movement in the direction suggested.

The Effect of Cheaper Money

The tightness of the money market has had a more serious effect upon the lumber market in the last year than it had upon almost any other line of business one can name. The lumber business in all its branches, manufacturing and trading, depends very extensively upon the state of credit. A tight money market prevents people from borrowing money for building purposes and so acts as a serious deterrent upon the demand for lumber. It has also the effect of preventing manufacturers from being able to borrow for their operations. In this way it tends to provide a natural cure for the troubles of over-production. This is what has happened during the past season and the prospects as a result are quite promising. When operators were considering the amount of timber they would cut in the woods this winter they had to face a tight money market as well as a discouraging demand for lumber. Accordingly they decided in many cases to reduce their cut. Subsequent conditions over which they had little control forced a number to increase their operations, but on the whole the season's cut will be a great deal smaller than it was in previous years. Manufacturers will face the opening of the business season with only moderate stocks. The improvement in the money market which has already set in, and which promises to provide money on much more reasonable terms for the coming season of building, will cause a firm demand to appear for lumber. If nothing unforeseen occurs the improvement which is now in progress can be depended upon to bring about these results and to place the lumber business upon its feet again before the summer has advanced very far. Under last summer's conditions it was impossible to borrow more than about 59 per cent. of the money needed for building purposes. There were few people who could put up one-half of the money they needed, and the result was that building returns for the year fell off seriously, although towards the end of the year they improved greatly. The improvement now under way will probably mean that money will become plentiful enough to permit borrowers to obtain about 75 or 80 p.c. of the amount they wish to spend upon building. The effect of such an improvement would be far reaching.

Better Prices for the Asking

The present state of the market for lumber is well summed up in a remark which was recently made by a lumberman, who was asked as to his views on the matter. He stated that some of the mills would get more for their money if they asked for it. This is so true a statement that it is being put to the test by a number of mills at present. Lumbermen have been waiting patiently for the arrival of the present market conditions and they should be quick to take advantage of them. For several months their hands have been tied to a large extent by the heavy stocks and the money stringency. To-day matters are on quite a different footing. Unless overproduction is allowed to interfere the coming

RETURN THE TRADE CIRCULARS

With a view to obtaining a reliable estimate of the extent of the lumber business in Canada in 1908 and for the purpose of being able to present a review of the conditions prevailing, the "Canada Lumberman and Woodworker" sent circulars to lumber manufacturers throughout the country recently asking for statistics. The intention is to publish in an early issue a complete survey of the lumber business. The editor wishes to impress upon those who still have not filled in and returned the circulars that they will be assisting materially by doing so at once. A few of the circulars sent out have not been returned as yet. Those which have been sent in are remarkable for the unanimity of the report that conditions are improving rapidly.

season will see the lumber manufacturers again able to obtain something like an adequate return for the money expended in the production of their stocks. In the past half-year there has been a fairly philosophic tendency among the lumber manufacturers generally and they have been content to accept what they could get without seeking to increase business at the low rates. But there have been some among the manufacturers who have pursued a suicidal policy and have done a great deal to demoralize the trade. They have sought for business even at figures which involved a loss on the mistaken assumption that they were avoiding still heavier losses. If they had been more far-seeing they would have held on longer and partaken in the improvement which was sure to come sooner or later. "Sooner," however, was the key to the situation with many of them, and as they had to have money to

meet the demands of their creditors the only way they could raise it was by sacrificing their stocks. These unfortunate ones are to be commiserated rather than blamed, but there were still others who by their readiness to accept any price rather than remain idle, contributed materially to the general feeling of panickiness which brought about the trouble for the unfortunate ones who were obliged to raise money.

The money market, however, has eased off now and there is a better feeling prevailing in nearly every section of the trade. A few months ago it was almost impossible to create any demand for lumber at however an alluring price one sought to stimulate it. To-day the demand is picking up of its own accord and there is much truth in the assertion that better prices could be obtained if only the manufacturers would ask for them.

Little Matters of Much Importance to Insurers

Lumber manufacturers and dealers are credited with being as wide-awake to matters which affect their financial conditions as any other class of business men. It is hard to understand, therefore, why so many of them have failed to pay proper attention to matters of insurance. No form of risk can be imagined which should make its owner more careful as to the prevention of fire possibilities, yet there is a lamentable lack of interest shown in many cases where one would least expect it. Taking up the question of careful attention to details, "Lumber Insurance" in a recent issue discussed a number of seemingly trivial matters which, however, go a long way towards making an insurance company feel comfortable regarding a risk, and which therefore result in a lowering of the rate if they are given proper attention. The article referred to is as follows:

So general are the faults noted by our inspectors in their observations of lumber plants that with the exception of those risks which are above criticism in the matter of complying with insurance requirements a universal classification can be made. The chief criticism is not due so much to the absence of the agencies which go to make up a good risk, but rather results from a neglect of the different forms of apparatus which have been installed in many cases through the suggestions of insurance companies for the general improvement of the property, and which usually entitle the assured to a reduction in premium. Next to construction the question of private fire protection is of primary importance in its effect upon the rate of any woodworking establishment or lumber yard. But even after such a system has been properly installed, the efficiency of such protection is often greatly lessened through certain general defects.

The use of the hose house for other purposes than that for which it was originally intended is one manifestation of neglect worthy of comment. We have seen this tendency to misuse such a building develop to an extent which greatly lessens the efficiency of its service as a means of fire protection. This tendency to interfere with the proper working of such appliances has even gone so far that one outlet of the hydrant would be coupled on to a pipe to supply water for drinking purposes. The difficulty experienced in removing such an obstruction in case of fire might result in a delay which would allow the fire to get beyond the control of the available protection, thereby entailing a serious loss either to the insurance companies, to the assured, or both.

It is so easy for the nozzle to become misplaced and for the hose

to be carried away to some other part of the plant, thereby leaving some part of the property unprotected, that it is always desirable for the nozzle to be attached to the hose and the hose to the hydrant or standpipe. By properly tightening the valve or by boring a small hole on the under side of the pipe, where the drip comes, the criticism that the leakage will injure the hose is easily overcome, and no one can gainsay the desirability of having everything in readiness for instant use when a fire occurs.

It is important that any form of fire protection, whether it be an extinguisher in the mill, a water barrel and bucket or standpipe with hose, should be so situated that it is easily accessible and readily adapted for use. Through thoughtlessness it is not infrequently the case that extinguishers have been allowed to become incapacitated through neglect; that water barrels have been covered up and rendered inaccessible through piling manufactured stock or refuse around them until they are almost hidden from view. Standpipes are occasionally found in obscure places, and so located that a part of the mill building in which they are situated is left entirely unprotected. By giving the same care and attention to the appliances which are used for the protection of the property as to the machinery, the result would be fewer fires and better rates.

As every hydrant is provided with two outlets, it is desirable that every hose reel should be provided with sufficient hose and nozzles in order to derive the greatest benefit from such protection. In the confusion which usually follows the cry of "fire" it is not improbable that a hose reel might be run out without thought of the appurtenances which are required after reaching the hydrant. If all necessary articles are kept attached to the hose reel, instead of hung on the wall of the hose house, any oversight, such as the failure to take nozzles and spanners, will be less liable to occur. Oftentimes a hand reel is found with no rope attached. Care should be observed that a rope is always fastened to the handle of the reel for the convenience of the men who may be called upon to move it.

While the criticisms and suggestions noted above are not applicable to every risk, and all might be applicable to any risk, there may, nevertheless, be those of our readers who will find some point which they can use in improving the standard of their own plant. As our experience has proved the desirability of observing care in these seemingly small details, we commend such to policyholders and others, confident that by their careful observance the interests of both the insurer and the assured will be conserved.

The Stumpage Situation in British Columbia

On account of the interest which is being taken in the tariff removal proposals in the United States, one of the subjects which is being discussed frequently is that of the price of stumpage in Canada. If the tariff on lumber should be removed and Canadian lumber admitted into the United States free of duty, the price of stumpage in this country would become a material factor in the regulation of the price of lumber in the United States. Manufacturers at United States Pacific coast points are anxiously combatting the proposal to remove the tariff, as they believe that it would involve them in ruin. They point with some reason to the difference in the cost of stumpage in the two countries. In the State of Washington the average price of standing timber is now \$2.50,

while some of it is held at \$4 to \$5. Washington operators who have been looking into the question assert that the maximum price for standing timber in British Columbia to-day is \$2, while much of it is held at \$1.25 to \$2 per thousand. These prices, so far as British Columbia is concerned, refer to timber held under the provincial licenses which took the place of the former provincial leases. Under the lease system timber can be held for a period of 21 to 30 years and the lease can be renewed indefinitely. The royalty cannot be increased during the current term of the lease and the taxes vary only from 5 to 15 cents per acre. Most of this class of timber is held by old operators, and is therefore very good. Sales of timber held under these leases have been made as low as 25

cents per thousand, and in some instances a smaller sum has been accepted. One authority speaking upon the matter states that the high mark is about 50 cents. Whichever way one looks at the question therefore, the owners of timber in British Columbia can afford to operate or sell at prices which in open competition with the operators in Washington would give them a decided advantage. It is little wonder that the latter are making a strong campaign against the removal of the tariff.

There is another aspect of the question, however, which should receive more attention than it is getting. This is the fact that a great deal of the British Columbia timber is being bought up by, or has already passed into the hands of, United States operators or speculators. The ruin of the Washington mills, if effected by the tariff removal, would be to the advantage of United States owners in British Columbia, and the dispute is really one between rival factions in the same country. Can-

adians have little to worry about in the matter. If the duty remains they will still occupy the strategic position of having in their country the finest timber left standing on the continent. If the duty is removed they will have their timber exploited perhaps to a much greater extent than it would otherwise be, but they will have a remedy in their own hands in case there should be any danger of wholesale destruction of Canadian timber resources for the sake of supplying the United States markets. The imposition of an export duty on lumber manufactured in Canada would have a similar effect to that which the export duty on logs has had in some of the provinces. It would practically leave conditions as they are at present, with the exception that whatever lumber went to the United States would pay a duty to the Canadian governments instead of the United States.

The Margin of Profit on Western Shingles

Among the varying opinions which have been presented in the United States regarding the proposed reduction or removal of the tariff on lumber, the most noticeable fact is that the majority of them are—as one would expect—based upon business interests. The situation in regard to shingles affords an instance worth discussing, as it provides unusually interesting evidence relating to the state of affairs on the Pacific coast. One finds in a recent issue of the "Pacific Coast Lumber Trade Journal," published at Seattle, a clear, comparatively concise and well reasoned argument in favor, not of a reduction of the duty on shingles, but of an increase. The writer of the article is Mr. R. W. Douglas, and so far as the facts which he produces are concerned, they point inevitably to the conclusion that with less duty the Pacific Coast shingle business of the United States would be ruined. The causes of this are worth studying.

Mr. Douglas lays great stress upon the claim that the Hill-Harman railway companies place an unfair burden upon shingles destined for eastern markets, and he makes a comparison with the treatment afforded to the British Columbia shingle manufacturers by the Canadian Pacific Railway. If there were any considerable difference in the treatment afforded by the railways, this would be a strong argument in Mr. Douglas' case, but the facts, so far as they relate to points in the Eastern States, such as Buffalo and Rochester, do not bear out the claim. The freight rate by C.P.R. is identical with that by American roads for delivering shingles at such points. This being the case, the matter resolves itself into a consideration of the cost of manufacture and the quality of the goods produced. In this regard Mr. Douglas has a strong case. He claims that the Oriental labor so generally used in British Columbia, the proximity of the timber to the shipping points, and the better quality of the timber, militate strongly against the Washington product. Accordingly he suggests that the duty should be raised from 30 to 45, or even

60 cents per thousand. If a duty of this nature were imposed he believes that the mills of Washington would be able to take care of themselves, as they would then be exactly on a par with the Canadian mills which shipped to Washington markets. The Washington mills, he further believes, would be entirely unable to continue in business if Canadian shingles with their superior quality were allowed to enter free.

This claim by Mr. Douglas would lead dealers in Eastern Canada to conclude that he is pretty well conversant with the conditions which have frequently existed in Eastern Canada. During the business depression of the past season, shingles have been selling at rock bottom prices, but in previous times when business was good, British Columbia shingles were shipped to points in Ontario and sold there at prices as high as they brought at points across the border, such as Buffalo. The conclusion is that manufacturers in British Columbia are able to absorb the duty of 30 cents per thousand and still make a profit at American points, wherever they are on an equal basis in regard to freight rates. Apparently they have a margin of at least 30 cents per thousand profit on the goods which they can sell in Canada, over and above the ordinary manufacturing profit. This margin would have to be considered in the matter of tariff changes and apparently Mr. Douglas has considered it very carefully, as the duty which he proposes would just exactly counteract it. Dealers in Eastern Canada have been of the opinion for some time that they have been paying an unfairly high price for British Columbia shingles. In view of Mr. Douglas' presentation of the case—and he claims to have based it upon the result of a very minute inquiry—the situation will bear close examination. Possibly the manufacturers of British Columbia can show that they have not charged unfair prices for the product in Eastern Canada, and if so the "Canada Lumberman" would be glad to hear from them and present their views.

Proposed Convention of Lumbermen at Calgary

A general lumbermen's convention, to be held at Calgary, Alberta, some time early this year, probably about the middle of February, has been proposed by Mr. P. Lund, of Wardner, B. C., president of the Crow's Nest Pass Lumber Company, Limited, and prominently identified with other large concerns in the West. Discussing the proposition with the LUMBERMAN, Mr. Lund pointed out that it should be in no sense an association meeting, but a general meeting of all the interests connected with the lumber business, from the stump to the finished product. "We have spruce mills in Northern Alberta and Saskatchewan," said Mr. Lund, "pine mills in Western Ontario, and the Mountain and Coast mills of British Columbia. All the different dealers, wholesalers, lumber travellers, commission merchants, contractors, and the different industries that are users of wood products, would be benefitted by a general convention of this kind. Calgary is suggested as the place of meeting, because it is not only very centrally located with regard to the different interests mentioned, but it is now an important city, prominent as a wholesale centre, shipping large quantities of produce, in the way of meats, butter, eggs, poultry, grain, hay, etc., together with numerous manufactured articles, into the lum-

ber camps of British Columbia, and might look forward with a great deal of satisfaction towards a meeting of the kind mentioned, where they would have an opportunity of meeting the representatives of the different interests connected with the lumber industry. There is no question as to the advisability of the manufacturers from the different districts meeting together from time to time in general convention. One of the great features that must be met in this country, and must be met by the lumbermen, is the bush fire question. Judicious and conservative logging is also an important matter. Proper and uniform manufacture, and establishing uniform grades, is also very important both to the consumer and manufacturer.

"Transportation, car supply, and equitable freight rates are important features which might properly be discussed at this meeting, also the best and most equitable possible method of handling the lumber products of Western Canada to the very best advantage of all concerned, as well as the perpetuation to future generations of the timber growth of the country." Other matters of equal importance to lumbermen generally, would doubtless arise for discussion at the time of meeting.

The British Columbia Trade

Evils of Over-Production—Forcible Letter to the "Canada Lumberman."

Mr. A. E. Watts, of Wattsburg, B.C., writes to the "Canada Lumberman and Woodworker" as follows:

Industries, like individuals, are subject to diseases. At the present time the lumber industry is suffering from a disease that has proved nearly fatal to some operators, who have attempted to commit commercial suicide, like the small boys who got a surfeit of green fruit, they are howling and are now going through the painful ordeal of taking their medicine, which is being applied in homeopathic doses by the banks. What is the reason they require it? Simply their inordinate selfishness, the senseless race after the quickly made dollar. During prosperous times a mill-owner with one mill doing well says, "If I had another mill I would double my earnings, my bank is generous, my creditors are easy." He goes into debt with the intention or hope of doubling his earning capacity, and like the dog crossing the stream with a solid chunk of meat, he drops the substance in grabbing for the reflection of what he already has, and worse than that, he absolutely kills the goose that lays the golden egg, by over-production. This is further increased by his desire to be considered clever when he is making money he advertises the fact to the whole world, thereby inviting competition.

Associations of lumber producers hold semi-public meetings, their secretaries, proud of their position of transient power, supply details of production and consumption, showing that the former cannot keep pace with the latter, indicating that future profits might exceed those then being made. The natural result is that others erect mills, and those originally having one now have from four to ten mills, until the capacity of production is over double the possible consumption in the most prosperous times. This is not a guess; statistics prove it. When bank associations meet, do they advertise the fact that one and all agree to pay 3 per cent. for deposits, and charge the gentle public from 7 to 17 per cent. for interest? Does the insurance combine let their secretary give full reports of how they have decided to fleece the insured? Ditto the steel trust. In fact in every other trade and calling, the spirit of combination is in vogue; but the lumbermen are not up-to-date, they are behind the times, their ability is branded "mediocrity."

Then on a falling market vain attempts by appealing to brother mill-owners are made to keep up the price on their word of "honor"? All but one promise to say by each other. That one is ostracised simply because he points out the absurdity of the ludicrous proposition, and points out that the inevitable law must prevail. "Prices of all products are ruled by production and consumption," which means in times of depression the survival of the fittest. It is an easy matter for persons of mediocre ability to conduct a business profitably in boom times.

The innate selfishness of human nature has never been better demonstrated than by some men in the lumber trade. For a short period they were simply coining wealth, but not satisfied with that, they grabbed for more, attempting not only to do the wholesale trade but the retail also, and succeeded in crushing out of existence many retail dealers, some milling concerns at the present time controlling from 20 to 60 retail yards, and in many districts obtaining an absolute monopoly of the trade. At the present time the boomerang is on its return journey and smiting those who deserve it.

You ask what is the outlook for 1909? Personally I am inclined to be optimistic, but the real situation does not warrant that view for the simple reason that there is more than enough lumber already manufactured to supply the normal demand for a period of two years. The mills now in existence running full time can manufacture more lumber in one year than is required in two years, and more mills are being erected; the demand in 1909 is not at all likely to be equal to that of 1906. That year a greater amount of lumber was used than in any other year in the Northwest, and the history of panics shows that recovery from the effects is always slow, and the extravagance of the Canadian people, through the Government whose actions they have endorsed, has had a depressing effect on European investors in Canada.

The wise and patient operator will eventually make more money by letting his timber stand in the forest than by slaughtering it.

Wilful waste of timber and forest destruction is caused by railway companies which are permitted to violate the law by allowing inflammable rubbish to accumulate along their right-of-way, although both the Dominion and provincial laws distinctly specify that railway companies shall keep their right-of-way free of inflammable material. Prospectors and others, through gross carelessness, burn millions of feet of valuable timber every year, but the greatest offender of them all is the lumberman who takes out the cream, the pick of the finest logs, and is permitted to leave logs with slight defects, with tree tops, cut brush and other debris; he leaves a trail of veritable fire traps behind him, and

where fires strike such spots it is beyond human power to stop them, they destroy all young trees, and the possibility of future forest growth, except a dense and rank crop of useless jack pine. It would entail no hardship on the lumbermen if they were compelled to clear up all the tree tops, brush, etc., provided the law were enforced all over Canada, and a duty imposed on American lumber.

Mr. Watts has struck a number of nails on the head, in regard to the evils growing out of reckless over-production. His views will appeal to manufacturers in all parts of Canada. The "Canada Lumberman and Woodworker" would like to receive the views of others on the same or similar subjects.

Small Mill-Owners Seeking Government Relief.

A number of small sawmill owners and loggers in British Columbia have started a movement to secure relief from the Provincial Government at the next session of the legislature. They claim that they are unable to obtain sufficient standing timber for their legitimate immediate needs, alleging that practically all the timber on the British Columbia coast is being held by speculators.

These small millmen and loggers possess no supplies of standing timber like some of the big lumber manufacturing companies, and since the Provincial Government placed a reserve on all Crown timber lands they have used up their holdings, and are now in the position of having to buy from the people they declare are holding for speculative purposes at such prices as are alleged to be prohibitive.

According to a statement made by one of the interested parties it is the intention to petition the Government to enact amendments to the regulations governing the holding of timber lands by special license, which will result in forcing the present owners to "loosen up" at reasonable prices. As all holdings under special license are subject to such changes in regulations as the government from time to time may see fit to enact, the present owners would have no recourse—their contracts with the Provincial Government being perfectly plain on this point.

In the alternative, the government will be asked to throw open the Crown reserve to bona fide loggers and millmen so that they shall be enabled to log off these lands for their immediate needs.

It is explained by those behind the movement that it is not their intention to seek any confiscatory legislation, but merely a measure of protection against what they term extravagant demands of present timber-holders. Arguing that the Act respecting sale of government timber does not contemplate the holding of that timber for speculative purposes it will be sought to have the regulations so changed that it will become unprofitable to hold timber lands from year to year for an indefinite period without operating them.

Sayward Company's New Victoria Plant.

The new plant of the Sayward Lumber Company on Store Street, Victoria, has recently been put in operation after about eight months of construction work, involving the expenditure of nearly \$150,000. Further improvements are yet to be made after which the capacity of the plant will be 250,000 feet per day.

The machinery of the plant is the most modern obtainable, and is operated by a Corliss engine of 1,700 horse power of the latest type. A dynamo operated by the engine also provides lighting power for the plant. The engine room and boiler house are of a most substantial character.

A drying kiln of concrete construction is in course of construction. The machinery will be further increased by the addition of another band saw, and other special machinery, such as a Stetson post sizer and a Mashond roller band and small edger, which will be manufactured by the Allis-Chalmers Company, of Milwaukee. With the exception of the special machinery, all the machinery installed has been manufactured in Victoria.

Washington Lumbermen Oppose Duty Removal.

Lumbermen in Spokane, Wash., have enlisted the aid of the Chamber of Commerce and the 150,000 Club to make formal protest against removal of the duty on lumber. The argument advanced is that Washington is one of the chief lumber-producing states; that a large proportion of the prosperity in this state depends upon the development and advancement of the lumber industry; that if the present duty of \$2 per thousand feet on foreign lumber is removed the British Columbia lumber kings will practically control the lumber trade in this state and that one of the most important industries of Washington will be throttled. The senators and representatives in Congress from the State of Washington are opposed to the removal of the tariff duty on lumber, and will oppose any attempt to place it on the free list.

The Fraser River Lumber Company's Splendid Plant.

The plant of the Fraser River Lumber Company, Limited, of Fraser Mills, B.C., is one of the most complete in the world and is a source of much pride to the people of that city. The machinery in the mill is propelled by three engines which develop 3,000 horse-power. The largest of these is a Reynolds Corliss twin. All the shafting in connection with the machinery is located in the basement entirely away from the employees. The boiler house contains 16 boilers, which are connected overhead by smoke tubes, which in turn join the great smoke stack eight feet in diameter and 50 feet in height. Above each boiler is a circular hole leading to the furnace through which a stream of sawdust enters from pipes, thus feeding the fire constantly without manual labor. The full capacity of the mill running several shifts is 700,000 feet in 24 hours.

Recently a visit was paid to the mills by some 80 or more business men at the invitation of the manager, Mr. A. D. McRae. The visitors were shown all over the extensive works and paid a visit also to the wharves, boarding houses and other parts of the company's property. At the wharves the Chilean barque "Ivanhoe" was receiving a load of a million feet of lumber. It requires about nine vessels to carry the lumber purchased from this mill. The company intend to extend their wharves greatly, so as to enable them to have at least seven vessels loading at the one time. The wharves themselves will accommodate over

Hugh A. Rose, Eastern Representative of the Fraser River Lumber Company.

twenty million feet of lumber. The company's town, consisting of the office block, store block and some twenty houses, in addition to a hospital, is a centre of much interest. The town provides many comforts for its residents, including electric light, a telephone exchange and a supply of the purest water to be obtained.

The eastern representative of the Fraser River Lumber Company is Mr. Hugh A. Rose, whose portrait we publish herewith. His office is located at 3 Toronto street, Toronto, and he is busily engaged in looking after the requirements of his customers.

Trade Enquiries.

The Dominion Government Trade and Commerce reports contain the following trade enquiries. Readers of the "Canada Lumberman" may obtain the names of enquirers by writing us, enclosing stamped envelope and stating number of enquiry:

1906. Hardware, wooden handles, etc.—A prominent firm of hardware dealers in Antwerp, Belgium, is in the market to purchase and handle on commission all kinds of wooden handles and general hardware.

1910. Ash butcher blocks.—A firm in Hull, Eng., is in the market to purchase dry ash blocks, 48, 60 or 72 inches long, 20 to 30 inches wide, and 4 to 6 inches thick, of Canadian manufacturers. Will order 20 to 40 blocks at a time.

1931. Box shooks.—A firm of general merchants and importers largely interested in the sale of Canadian goods would like to hear from shippers of box shooks into Liverpool or Manchester.

1934. Broom handles.—A firm of general smallware merchants and importers desires quotations from Canadian shippers into Manchester of broom handles.

1952. Curtain poles.—A Manchester firm requests description and prices of curtain poles from Canadian manufacturers.

1953. Wood pulp.—A Chesterfield firm wishes to correspond with Canadian exporters of wood pulp.

1956. Mouldings.—A Liverpool firm wishes to get prices and description of plain and fancy mouldings from Canadian manufacturers.

1959. Box boards.—A Manchester firm asks for description and prices of box boards from Canadian manufacturers.

1960. Laths.—A Lancashire firm asks for prices of plasterers' laths from Canadian manufacturers.

1961. Box boards.—A Manchester firm asks for prices c.i.f. Manchester of box boards planed on one side of the following dimensions: Sides, $18\frac{1}{8} \times 11\frac{5}{8} \times 5-16$, in two pieces; ends, $12\frac{5}{8} \times 11\frac{5}{8} \times \frac{5}{8}$, in two pieces; T. and B., $16\frac{7}{8} \times 13\frac{1}{8} \times 5-16$, in three pieces; four bars, $11\frac{5}{8} \times \frac{5}{8}$.

1962. Maple block flooring.—A Carlisle firm asks for description and prices of maple block flooring from Canadian manufacturers.

1971. Lumber.—A Cape Town commission merchant and general agent, with branches at Port Elizabeth, East London, Durban, Johannesburg, Lorenzo Marquez and German South-West Africa, desires to be placed in touch with Canadian exporters of lumber.

2017. Deal ends and boards.—A Birmingham firm can purchase large quantities of deal ends and boards.

2032. Wheel timber.—A Cape Town firm of wholesale general merchants and commission agents desires to be placed in communication with Canadian manufacturers and exporters of wheel timber for cart and waggon work.

2039. Door sashes and mouldings.—A Cape Town commission agent desires to be placed in communication with Canadian manufacturers of door sashes and mouldings.

2040. Pine.—A Cape Town commission agent desires to be placed in touch with Canadian exporters of clear pine.

2046. Box shooks.—A former Canadian now resident in Mexico is anxious to get in touch with Canadian exporters of box shooks interested in Mexican trade, and thinks that an extensive market exists in his district. He would be glad to undertake the handling of a few first-class

2058. Wood pulleys.—Inquiry has been made by a well-established firm of engineers' merchants and agents who desire to hear from Canadian manufacturers of wood pulleys suitable for English use.

2064. Oak.—A timber importing firm established in Liverpool, Bradford and Hull, is open to consider lowest c.i.f. prices to Liverpool from Canadian shippers of plain, white and quartered white oak, 1 inch thick by 12 and 10 feet lengths.

2065. Carriage woodwork.—A north of England firm is a buyer of wheel spokes, bent hickory rims, hubs and carriage work generally, and wishes to be introduced to Canadian firms who could supply them to requirements.

2067. Wood casings.—A firm of timber importers will consider specimen samples and prices for c.i.f. shipments to Liverpool of wood casings for electric lighting purposes, which they now buy in the United States, of whitewood. Sizes: $1\frac{1}{4}$ to 4 inches thick (mainly $1\frac{1}{2}$ to 2 inches) by 8 to 16 feet in length.

2068. Picture mouldings and requisites.—A firm largely importing foreign made picture mouldings would be interested in receiving illustrated catalogues from Canadian manufacturers of all kinds of picture mouldings for c.i.f. shipments to Liverpool. They are also buyers of sundries and appliances used in the picture framing trade.

2069. Picture backing.—A firm of importers, merchants and agents are in the market to purchase picture backing cut from pine planks, c.i.f. prices desired for shipments to Liverpool.

2078. Wood dowels.—Inquiry has been received from a firm of timber importers for the names of Canadian makers of dowels $\frac{1}{4}$ -inch by $\frac{7}{8}$ -inch thick, c.i.f. prices desired for shipments to Liverpool or Manchester.

2080. Wood pickets.—A Sunderland (Eng.) firm are buyers of pine, basswood or spruce pickets, 48 inches long by 1 inch by 1 inch, and wish to hear from manufacturers who can send large and regular shipments.

2082. Box shooks.—A manufacturing firm in the north of England are buyers of box shooks for packing purposes, and wish to receive particulars of sizes and prices from Canadian manufacturers with a view to shipments into Manchester.

2083. Wood dowels.—A Sunderland (Eng.) firm wishes to get into touch with Canadian manufacturers of wood dowels $\frac{3}{8}$ and $\frac{1}{2}$ -inch diameter by 36 inches long.

2091. Lumber.—A London firm of timber exporters and merchants wishes to get into touch with Canadian lumber exporters.

2098. Machinery.—Inquiry has been made by a London firm for the names of Canadian exporters of woodworking machinery.

Mr. W. R. Smith, M.P., Rydal Bank, Ont., states that the amount of timber cut in the woods of Northern Ontario this winter will be only about 70 per cent. of what it was last year. The most of the timber cut, too, will be that which has been scorched by forest fires. A good many railway ties are being got out this winter.

Dr. B. T. Galloway, of the U. S. Bureau of Plant Enquiry, stated to the House Committee on Agriculture recently that a material had been discovered by which print paper can be produced in competition with wood pulp.

News of the Maritime Provinces

Useful Sizes Growing Scarce at St. John.

The London "Timber Trades Journal" in a recent article upon the spruce business said:

So far as the quality of spruce from the lower ports is concerned, it has long been a tradition that the shipments from St. John constituted the criterion. Could this reputation have rested solely upon its city cut deals, the position of St. John as the premier port in point of quality would not be the trade fiction it unfortunately is to-day. It is, however, well known that, apart from the quantities cut in St. John, several other productions are blended therewith to furnish the well known St. John "mixtures." The mills along the banks of the St. John River—itsself some 450 miles long—together with those on its numerous tributaries, of course find an outlet through that port; and thither from a dozen or so small ports from each side of the Bay of Fundy; also voyage lighters laden with spruce, while the railway systems having their termini in St. John also furnish considerable quantities, the produce of mills in the interior. After over a century's history as a timber port it is not altogether surprising that the specifications of the cargoes shipped from this port no longer contain the large percentage of wide deals which they formerly did. Even a decade or two back cargoes containing 20 per cent of elevens could be obtained without much difficulty; but nowadays buyers have perforce to be content with 5 to 7½ per cent. of this useful size. In these degenerate days of the wood trade it is specification which is the determining factor as to whether a cargo is cheap or dear, rather than the c.i.f. price.

While the manufacturers, whose usual outlet for their production was the port of St. John, seem during all these years to have been animated chiefly by a desire to get the timber off their lands in the shortest possible period of time, and at whatever prices that may have been ruling, in the Restigouche district more far-seeing methods have prevailed, the benefits of which are now becoming apparent. The boundary line between New Brunswick and Quebec for part of the distance and with numerous tributaries, the Restigouche taps some of the best forest districts of both provinces. The timber limits in this district having been held by a few large firms with capital, the small producer, who in the aggregate figures so largely in the shipments via St. John, has had to keep away; the result being that the shipments from Campbellton and Dalhousie, coming from a few large mills, are very regular in quality. Holding their timber lands for the appreciation in deal values, which it has all along been obvious must ultimately obtain, shippers exporting through these ports are to-day in the fortunate position of being able to offer attractions by way of specification with which hardly any other of the lower ports can hope to compete. As regards manufacture, gang saw mills are the rule, and for quality, precision of manufacture, and condition the deals have already won a high reputation. At Campbellton, as the result of dredging, the shipping facilities have been greatly improved, and such large steamers as the "Fridtjof Nansen," upwards of 3,200 tons gross register and some 326 feet in length, have cleared outwards this season with ease. As a shipping district, the importance of the Restigouche has not yet come into the prominent position in the spruce trade which, unless we are much mistaken, it is destined to occupy. While in other districts felling has for years been pursued with a prodigality almost reckless, manufacturers along the banks of the Restigouche River have been content to conserve their forests, and, with freights now at the lowest in the history of the trade, are able to secure c.i.f. prices yielding a f.o.b. return which affords full compensation for the long period of self-imposed restraint.

Steamers Entering the Coasting Trade.

An important occurrence in the history of St. John, N.B., shipping (and one which has a direct bearing upon the lumber industry) took place a few days ago when the steamer "Beatrice" reached that port to load lath for New York City. The event was remarkable from two standpoints. The "Beatrice" was the second steamer to load above the falls and the first to take an entire cargo of short lumber from St. John.

She was loaded by Stetson, Cutler & Company and consigned to Stetson, Cutler & Redman, of New York City. The "Beatrice" has been chartered for four trips at 60c. per thousand on lath and \$3.00 per thousand feet on long lumber. The cargo mentioned above consisted of two and one half millions of spruce lath. The "Beatrice" carries about five hundred thousand superficial feet of long lumber.

Messrs. Cushing & Company have also chartered a steamer to carry several cargoes. It was stated by one of the interested parties that the reason for bringing steamers into the coasting trade (which has been confined entirely to sailing craft) was the increasing scarcity of schooners due to wrecks and to the condemning of many of the fleet of sailing vessels which ply between New Brunswick ports and ports in the United States. Owing to this scarcity there had been recently a considerable boosting of freight rates; as high as \$3.50 having been paid on long lumber and

70c. per thousand on lath to New York. The result of the introduction of these steamers into the lumber freighting fleet is looked upon by many as the beginning of the end so far as the sailing vessel is concerned, although the growing scarcity of schooners has long been indicative of some such condition.

Some Details of the Alfred Dickie Sale.

The Alfred Dickie properties in Nova Scotia, the sale of which to an English syndicate, headed by Sir Thomas Trowbridge, was reported in the last issue of the "Canada Lumberman and Woodworker," are located at eight different points, seven of them east of Halifax harbor, and one in the western part of the province. The eastern areas cover 345,000 acres, and the western 60,000 acres. They are: Stewiacke, 80,000 acres; Musquodoboit Harbor, 50,000 acres; Lawrencetown, 10,000 acres; Ship Harbor, 45,000 acres; Moser River, 20,000 acres; Liscomb, 50,000 acres; Sherbrooke, 90,000 acres; Tusket (Yarmouth), 60,000 acres; total, 405,000 acres.

Each of these areas has a thoroughly equipped mill, and the sale includes the company's timber areas, sawmills, dams, wharves, stores, warehouses, and blacksmith shops—all in running order. The price of the properties, \$1,567,500, was reached by computing at \$3.50 per acre for the eastern 345,000 acres, and \$6 per acre for the 60,000 acres at Tusket.

The manager of the new company, Mr. T. N. McGrath, of Tusket, will probably make his headquarters at Halifax. Mr. McGrath was an associate with Mr. Dickie, and is thoroughly acquainted with the business. It is reported that the purchasers will erect a pulp mill in connection with their plants.

Nova Scotia Capital for New Mexico Timber.

A number of Nova Scotia capitalists, among whom are Mr. R. R. Chappell, president of Chappell Bros., Limited, and his brother, Mr. Wm. Chappell, of Windsor, N.S., have acquired a valuable timber property in Mexico. The tract consists of about 250,000 acres. The interested parties own the land outright. A part of it was formerly owned by a Picton man named Cameron. The purchase is situated in the State of Tampa, about 175 miles southwest of the City of Tampico. The land has been cruised in the interests of the new owners and the estimates furnished put the quantity of lumber standing thereon at 2,000,000,000 feet. Of this lumber the greatest quantity is pine. Oak is also very plentiful, and there is an abundance of black walnut, sweet gum, Spanish cedar, rosewood, Mexican mahogany, hickory and boxwood. The growth is said to be exceedingly luxuriant and it is also stated that lumbering conditions are very favorable. It is expected that the new owners will erect mills and, with a view to locking thoroughly over the situation, Mr. R. R. Chappell will leave shortly for Mexico.

Northern Maine Logging Railroad Proposed.

A story comes from Bangor, Maine, to the effect that it is proposed to build a logging railroad from the northern border of Maine through the forests of Western Arcostook and Northern Piscataquis to connect with the main lines of the Bangor & Arcostook at West Sebois, thence to the sea via the Northern Maine Seaport division of the Bangor & Arcostook with termini at Searsport and Stockton on Penobscot Bay. The estimated cost of such a road is \$6,000,000. The object of this road it is stated, is to tap the lumber woods in the section known as the Allegash territory. The logs cut on this territory have been, for generations, driven down the Allegash River to the St. John, to be manufactured on the New Brunswick side. The land comprises some of the best lumbering properties in the state. It is probable that the story is somewhat premature; at any rate it has caused little interest on the part of local lumbermen, who would be greatly affected should such an outlet for lumber from the sections described be provided.

The Macleod Pulp Company, Limited, of Liverpool, N.S., which recently acquired the pulp and paper mills on the Mersey River from the Indian and General Investment Trust, Limited, have made many additions and improvements to the property. The capacity of the mills has been increased and the management erected several additional buildings in the new plant. Over 100 men are employed about the plant, and in the winter season large quantities of pulp wood are purchased, giving employment to perhaps 300 woodsmen. The president of the company is John R. Macleod, and the vice-president Frank Stanfield, of Truro.

One of the greatest leather belts in the world recently was completed at a Philadelphia factory. Three-ply, it was 150 feet long by five wide, and required 300 hides in its manufacture.

News Notes from the Maritime Provinces.

The Berlin Lumber Company, operating near Sable River, Shelburne County, have completed the construction of $5\frac{1}{2}$ miles of railway which taps the H. & S. W. Railway at Wilkins' Siding. The company expects to ship 10,000,000 feet of lumber next season.

A Washington despatch states that President Roosevelt has appointed George A. Murchaie and Peter C. Keegan, of Maine, as commissioners to associate themselves with the Canadian commissioners recently appointed for the purpose of investigating and reporting upon the lumbering difficulties on the St. John River.

Though the lumber business has been dull in Nova Scotia during the year, as well as elsewhere, some of its allied industries have not suffered much. The firm of McKenzie, Crowe & Company, Limited, Bridgetown, manufacturers of the "Lumber King" shoe packs and larrigans now employ forty men, and during 1908 they manufactured 60,000 pairs of shoe packs and larrigans, which were shipped to every province in Canada.

Several members of the New Brunswick Government held a conference recently with lumbermen over matters affecting lumber interests. It was suggested, but not decided upon, that the Government at next session of the House should appoint a commission to draft an act to regulate the survey and export of lumber, and adopt a uniform scale throughout the province, having special reference to small lumber, as there is now no scale under eleven inches at the top.

It is reported that the North River Lumber Company, North River, N. S., is being reorganized with an increased capital. Mr. Frank J. D. Barnjum, the president and general manager of the reorganized company, is at present in the United States making arrangements for the resumption of the company's operations. It is expected that a large scaling mill will be erected during the winter and that the foundations will be laid for a large pulp and paper mill which will cost in the vicinity of half a million dollars.

Middleton, N.S., boasts among other industries of a large wood-working factory, that of A. W. Allen & Son. During 1908 the mill was running continuously on the 10-hour a day system, and will operate in the same manner all winter. About 45 hands are employed both in the mill and at outside work. Additions have been made to the plant during the past season, the principal one being a barrel factory. The firm expect to do a full season's logging at Albany this winter, and carry the output to Middleton in the spring. They report that prospects for business in 1909 are good.

St. John Exports to U. S. for 9 months.

According to a United States consular report the forest products exported into the United States from St. John, N.B., during the first nine months of 1908 showed a decrease in value amounting to \$687,976, or 30.3 per cent. In only one article, piling, was the value of the exports reported this year in excess of those of 1907. The value of the different articles is given in the subjoined table:

Article.	1907	1908
Lath	\$ 786,233	\$ 475,194
Lumber	1,292,379	938,073
Shingles	161,030	110,820
Staves	6,128	3,686
Piling	11,292	19,790
Clapboards	3,030	1,090
All other articles	847	400
Totals	\$2,236,939	\$1,578,963

Relative to the transatlantic lumber trade with Great Britain it is said that the low prices and light demand in England were due to the strike of cotton mill workers, which not only paralyzed that industry but brought about a decrease in the demand for lumber, particularly for the grades used by the manufacturers of boxes and packing cases.

The depressed condition of the American market brought about a decrease in the demand, as building in the north Atlantic coast cities was very light during the early part of the year. A change for the better has taken place within the last three months and conditions have materially improved in the lumber trade, as well as in other lines. The consul reports a betterment in the English markets, although it is not so pronounced as in the United States. Relative to the log input this winter the report states that it probably will be reduced anywhere from 35 to 50 per cent. as compared with the cut during former years.

An authority on the building question asserts that Winnipeg will break all Canadian records next year, stating that the building in 1909 will aggregate over \$16,000,000.

C. A. Spencer, Montreal, has purchased two million feet of merchantable spruce, now sawn, from MacLarens, Buckingham.

An Important Ontario Legal Decision Regarding Timber License Rights.

The case of Martin v. Romleskie which was recently tried before Judge McMahon dealt with a point of much interest to lumbermen. In his judgment, Mr. Justice McMahon, after summing up the evidence outlined the principal points in the case in part as follows:

The plaintiffs were lumber dealers in the County of Renfrew. The defendants were saw millers and lumber manufacturers operating in the same township. The plaintiffs obtained by transfer a license to cut timber on 16 square miles of the Township of Sherwood, which had formerly been held by McLachlin Bros. Patents under the Free Grants and Homesteads Act were issued to the defendant, John Romleskie, a free grant settler, on various dates from 1900 to 1904 on lots covered by the timber licenses owned by the plaintiffs.

All the patents contained the following reservation: "Also saving, excepting and reserving unto us, our heirs and successors, all pine trees standing or being on said lands, together with the right to enter upon said lands to remove said timber." The plaintiffs alleged that the defendants had cut trees and parts of pine trees from the lots covered by the licenses, not necessary to be cut for building and fencing purposes, or in the course of clearing and cultivation and had sold or manufactured pine timber and trees and parts of trees not necessary for the purposes of building, clearing, etc. The defendants claimed that the plaintiffs had no right under the licenses to cut anything except the "standing" pine trees.

Mr. Justice McMahon pointed out that there is in the patent a reservation "of the pine trees standing or being" on the lots patented, and that it is provided that the Commissioner of Crown Lands shall have "full authority to grant licenses to cut timber on lots located or sold under the Free Grants and Homesteads Act of 1868."

The Act made it clear that when a patent issued the pine trees were reserved to his Majesty and authority conferred on the Commissioner of Crown Lands to grant licenses to cut such pine trees, subject to the patentee's prior right to cut for necessary building and for the actual clearing of the land.

In giving his decision Mr. Justice McMahon said: "The only other question to be determined is as to the pine trees which were blown down and the parts of pine trees which were left on the ground in the course of cutting and removing other timber, excepting therefrom such pine trees as were necessary for the building and fencing purposes of the patentees of the lots or which were necessary to be removed in the actual course of clearing of the land for cultivation.

"As, by the patents issued to the several defendants, all pine trees standing or being on said lands are reserved to his Majesty, this includes by its very terms pine trees being on the land although they are not standing, and therefore trees blown down and known as 'windfalls,' and any person holding a license has a right to enter on the lands and remove the windfalls, as well as the standing pines provided for by sec. 14 of the Free Grants Act, and the butts of the pine trees felled by him and left on the lands which can be cut into sawlogs.

"The trees felled by the license holder were all his, although he only used parts of them at the time, and the butts of such trees as were left on the lands he is entitled to under his license to manufacture into square timber or cut into sawlogs. And this applies to the trees felled by McLachlin Bros., whose rights thereto were assigned to the plaintiff Martin. This, of course, is subject to the prior rights of the locatees or patentees to use such windfalls or butts for building or fencing purpose or clearing their lands, and in the latter case they could convert them into sawlogs pursuant to the provisions of sec. 14.

"There will be judgment for the plaintiffs declaring that they are entitled to all the pine trees growing or being on said lands, subject to the declarations of the rights of the defendants in the above findings."

Interswitching Decision at Walkerville.

Judgment has been given by the Dominion Board of Railway Commissioners in a case involving switching charges which (though not involving lumber matters in this instance) will prove of general interest (to all lumber shippers) inasmuch as it concerns a case of discrimination in favor of one point to the disadvantage of another.

Hiram Walker & Sons, Limited, of Walkerville, Ont., complained of discrimination in favor of Windsor in rates from points on the C.P.R. and Pere Marquette to Walkerville. The C.P.R. solicitor offered to quote a through rate from these points to the exchange track at Walkerville, but a hitch occurred over the question of who should pay the switching charges. The chairman insisted that under the order of July last concerning interswitching the contracting company must absorb one-half the charge for switching made by the G.T.R. at Walkerville. Mr. MacMurchy contended that this ruling should not apply because it would bring the earnings of a car below \$8 per car, as part of the freight paid would go to the Pere Marquette the intermediate road. An order was made fixing the rates from the various points at the figures suggested by Mr. MacMurchy and establishing a minimum car weight of 40,000 pounds, the C.P.R. to absorb one-half the G.T.R. switching charges at Walkerville and the Pere Marquette to pay its proportion of the amount.

The Arrangement of Shippers and Belt Guides

Hardwood shippers and hardwood devices of various patterns for shipping and guiding belts are quite common, says Geo. H. Melrose in the "Woodworkers' Review." While there are a great many belt shipping contrivances constructed from metal, or part metal and wood, there is a goodly proportion made entirely from wood. The hardwoods are chosen, as a rule, although one may traverse through many shops and mills and notice evidences of almost any kind of soft or hard wood used as shown

Fig. 1

Fig. 2

in fig. 1, for steering the belt over the wheels. The illustration is given to show how carelessly some of the shipping devices are rigged.

First there are the supporting drops, made from wood and arranged with a block at the lower ends to receive the shipper bar in slots made therein. These drops are often very carelessly nailed almost anywhere to the joists above. Often the drops are too short or too long. Sometimes they are set up unevenly. Frequently the drops are not parallel. Nevertheless, the blocks for making the bar bearing are attached thereto, and the bar is inserted.

The bar carries the side pieces A and B in this drawing. While the drops, the bar and the supporting bearings may be in order, the side pieces are exceedingly defective. The wood is not properly chosen. The pieces should be regular in size and of even grain and finish. It is important that the guiding pieces be secured firmly to the bar. Nails won't do. Screws or bolts are better. Hence the combination wooden belt shipper shown in this cut is imperfect. Still you can find many like it and even worse by visiting the mills and shops.

You will likewise find incorrectly designed shipping devices arranged for transferring the belt from one wheel to another, as in fig. 2. A board is used as the means for shipping and this board soon gets cut into as at C. This not only makes the shipping difficult, but it wears the belt prematurely.

Often the millwright constructs a shipping device with both hardwood and metal, as in fig. 3. This illustration shows the shipper properly

Fig. 3

Fig. 4

constructed with the regulation side drops, made of hardwood, and secured to the woodwork of the ceiling above. The proper block and slotted bearings for the shipper bar are fixed to the drops as shown. Bolts are used for this purpose. The shipper bar is adjusted in the slots and then the metal prongs are affixed. Instead of using hardwood side pieces for giving the running belt the necessary side to side motion in shipping, the two bolts are fixed in. These bolts are cut with threads so that a nut can be screwed on from either side of the bar. Hence the prongs can be fixed very firmly in place.

Another style of hardwood shipper noticed in manufacturing plants is shown in fig. 4. Here the running belt is guided along its course by the X-shaped pieces of lumber combined at D. These pieces are nailed to the cross piece of timber above.

In fig. 5 is still another design, in which all of the parts are made of hardwood. The drops are of the usual pattern. The slotted blocks for the bar are not unlike the ones formerly mentioned. The bar is also simi-

lar, but the side pieces, instead of being defectively arranged pieces of wood, are straight and properly fixed. Bolts are used to fasten the pieces to the bar.

The movement of the bar in all of these shipping devices is effected in various ways well known to the profession. Sometimes no mechanical arrangement is made and the bar is simply pushed backward and forward in the bearings as desired, using a stick or broom handle for the purpose. Then again we find pulleys and ropes rigged up so that when necessary

Fig. 5

Fig. 6

the shipper bar can be pulled to the right or to the left without leaving the floor. I have seen ladders used so that workmen could go up and adjust a shipper. This is not necessary when ropes, sticks or levers are used. The lever system calls for a drop-stick, pivoted up near the shipper; by swinging the base of the lever the shipper proper is moved to and fro. There are some shippers moved by gearing.

The hardwood roller system of belt shipping is used in some establishments. When the edges of the belt rub on the revolving surfaces of the rollers, as at E and F in fig. 6, the rolls form an easy, cushion-like surface and the belt is not damaged.

In the roller system, care has to be taken to select tough and well seasoned stock for the cylinders. It will not do to have them warp and crack. They must remain true and solid to do the work right.

The excessive cost of the installation of automatic sprinklers for fire fighting has to a large extent prevented their installation up to date. This cost is attributable to the expense of submitting provisional plans and providing for inspection, and also to the exacting demands which are made by the companies as to the character and extent of the equipment. Sprinkler contractors have each to send a representative to inspect, measure and lay out equipment, and the aggregate cost of this service must be added by all contractors to the general cost of the business. A measure of relief will probably be afforded by a course which has recently been adopted by the insurance department of the Canadian Manufacturers' Association. This department is now in a position to prepare plans and specifications and to superintend the erection of sprinkler systems under the regulations of any existing insurance organization. A saving can be effected in this manner of from \$200 to \$500 for each installation, and in many cases even more may be saved. This should result shortly in a material reduction in the cost of such installations. Another fact of importance in connection with the same subject is that modified systems of sprinkler protection, involving much less cost and carrying reductions in rates, are receiving the attention of the department. There are many manufacturers who were not prepared to install these systems up to the exacting demands of the companies, but would readily provide a more modest outlay in consideration of receiving commensurate benefit.

When the modern planer doubles the output of one built only a few months or years ago it's time for the mill man to find the reason why. He can no longer remain complacently satisfied with a feed of 50 to 60 feet per minute. Modern machines embody features that give the cutter-head a chance to do all that it is capable of doing. They provide for more accurate grinding and setting of the knives and, most important of all, for their sharpening while the machine is in motion. They make possible an equal distribution of the work done by the cutter-head so that each knife does its share. Thus the distance between individual knife marks is reduced, the finish is finer and faster feed is made possible.

The vast coniferous forest zone of Siberia is yielding ever-increasing quantities of timber, say the United States consular and trade reports. On January 1st, 1906, the state forests of Russia in Asia included 361,945,497 acres, exclusive of the Amur region, which had 288,742,000 acres; total 650,687,497 acres. The timber industry has scarcely begun to be developed in Siberia.

News Items from Ottawa.

J. R. Booth has begun the usual transportation of logs by train from his Madawaska limits to the mills at Ottawa.

As a New Year's gift J. R. Booth was presented with an oak and cut glass cabinet by the officers of the 43rd Regiment, Duke of Cornwall's Own Rifles. The gift was in recognition of Mr. Booth having on many occasions loaned his commodious private car to the regimental officers and for contributions he made to the funds of the regiment. In accepting the gift Mr. Booth praised the militia for service in times of labor riots and the graver troubles of rebellion and war.

When the Ottawa Board of Trade holds its annual meeting on Jan. 22nd, two of the city's best known lumbermen will be declared elected by acclamation to the offices of president and second vice-president, in the persons of Peter Whelen and J. R. Booth. Mr. Whelen, who becomes president, was the first vice-president during 1908 and has for many years been one of the most active members of the board. Mr. Booth has served on the Committee of Arbitration for many terms, but never before undertook the important duties of an executive officer.

Gifford Pinchot, head of the Forestry Department of the United States, visited Ottawa recently with an invitation to Canada to attend the convention in the United States for the purpose of considering the conservation of the natural resources of the North American continent. He delivered his message to Earl Grey and Sir Wilfrid Laurier. It is understood that both the Governor-General and the Prime Minister cordially accepted the invitation on the part of Canada and assured Mr. Pinchot that the Dominion would be adequately represented at the conference. Mr. Pinchot remained in Ottawa several days as the guest of Earl Grey and was also the guest of the Canadian Club at a dinner where he delivered an address.

A press report says that despite reports to the contrary, as much lumber will be cut in the woods along the Ottawa and St. Maurice Rivers this winter as in any previous year. A lot has been said recently about the lumber people refusing to bring out any logs this season owing to the low prices of last year having left most of the yards full of timber, and it is undoubtedly true that the slackness in the building market in the United States, Europe and Canada caused a considerable amount of timber to be held over; but inquiry among some of the chief lumber people revealed the fact that preparations are being made for an extensive cut. In the Ottawa Valley McLaughlin Bros., Gillies, the Pembroke Lumber Company and the Colonial Lumber Company of Pembroke, all state that they expect to cut as much as ever, and that they have a large number of men in the woods. In the St. Maurice Valley a similar state of affairs exists. The Laurentide Pulp & Paper Company will cut as many as 1,800,000 logs, the Union Bag & Paper Company 1,000,000 and the Belgo-Canadian people about the same number, while other concerns are cutting smaller quantities. Altogether there are at present in the woods in the St. Maurice region something like 5,000 men cutting logs for next season's trade.

An important step in the control of the Chaudiere water power was reached recently when the 49th pier of the huge dam built in concrete was finished. The promptness with which this portion of the undertaking was finished was due in a measure to low water. Although the contract does not require the dam to be handed over until Dec. 1st, 1909, it is likely to be completed about next midsummer. The cost will be about \$300,000. The water will then be held back by large stop logs of British Columbia Douglas fir. These fit into steel lined slots rising vertically at the centre lines in the sides of each pier. According to position the logs are in three sizes, 14 inches by 16 inches, 16 inches by 16 inches, and 16 inches by 18 inches. The openings between the piers are 22 feet in the clear and the length of the stop-logs a little more than that to allow insertion into the slots. The logs are lowered and raised by means of a special electrically operated travelling winch with a lifting capacity of fifty tons. The machines also have a thrusting power in order to force the logs into position against the pressure of the water. The winch will travel on rails laid upon the broad reinforced concrete roadbed which will connect the tops of the piers. In all 550 pieces of Douglas fir were needed, amounting to about 300,000 board feet in lumber. The first consignment ordered October 27th was delivered November 27. The time for the second order was only 16 days. Cameron & Company, who supplied the lumber, say that considering the distance and quality of the order the delivery was the quickest ever made in Canada.

According to an analysis of the through freight traffic published by the Canadian Pacific Railway from points in Great Britain to points west of Port Arthur in Manitoba, Alberta and Saskatchewan, on general merchandise and commodities, the through class rates, all rail and lake and rail, are considerably higher than the rates in effect from the seaboard. They are apparently arrived at by adding certain arbitraries to the rates from the seaboard. The same relation exists, generally speaking, in connection with commodity rates. Among 1,240 rates which were checked, it was found that there were only three cases where through rates seemed to be lower than from Montreal, namely on musical instruments, settlers' effects and green fruit, to Regina, Lethbridge, Calgary and Edmonton.

Personal and Trade Notes.

Mr J. B. Reid, of Reid & Company, lumber dealers, Toronto, will leave for a trip to the Mediterranean about February 1st.

A new wholesale lumber firm, Messrs. Muir & Terry, recently started business in the Confederation Life Building, Toronto. They are both practical men and are well equipped to supply the wants of the trade. Mr. J. K. Muir has lived at St. Catharines and has been in the sawmill business for many years. Mr. H. J. Terry has been for the past seven years travelling representative for Mr. C. A. Larkin, is well known throughout Ontario, and needs no introduction to the trade. Their advertisement appears in another column.

It is announced that Alex. Gibson has retired from the presidency of the Alex. Gibson Manufacturing Company. Mr. Gibson's career has been almost meteoric. When a youth he worked at a dollar per day in a sawmill at Milltown, N.B., later conducting mills of his own at Lepreaux and Nashwaak and subsequently founding the town of Marysville, N.B., and the great lumber industries in that district. Mr. Gibson is not only widely interested in lumber but also in the cotton manufacturing business, railways and other lines of activity. At eighty years of age he is still hale and hearty.

The DeLoach Mill Manufacturing Company, Bridgeport, Ala., have favored the "Canada Lumberman and Woodworker" with copies of their new general catalogue, their power catalogue and of their complete price list, which includes a list of their net selling prices. In doing so they report that they are well on the road to prosperity along with the balance of the country. The catalogues are issued in an extremely convenient form and are generously illustrated. They are attractively made up and present a wealth of useful information. The complete price list is a new departure in this line of business which should assist in increasing the popularity of this company's products.

Calendars Received for 1909.

Keenan Brothers, Limited, wholesale lumber dealers, Owen Sound, Ont., have issued one of the most attractive calendars of the new year. It contains, in addition to a large calendar block, a beautiful colored picture entitled "Midst Rock and Heather, Dartmoor." The picture is a splendid example of the printer's art.

C. A. Larned, wholesale dealer in lumber, lath, shingles and posts, Phoenix, N.Y., has favored us with an attractive calendar, bearing a handsome picture entitled "Water Lilies." The dates are in large figures, making the calendar useful as well as attractive. The picture is reproduced by color photography from an original painting by James Arthur.

C. A. Spencer, wholesale lumber dealer, 55 St. Francois Xavier street, Montreal, has issued an attractive calendar on light brown board with a bit of woodland scenery by way of decoration. The "Canada Lumberman" has been favored with a copy. C. A. Spencer has special facilities for supplying pine, spruce, hemlock, basswood, birch and British Columbia timber.

The Winnipeg Development and Industrial Bureau have issued a useful calendar with handsome views of the city and its surroundings and containing a number of interesting facts relating to the city and its various attractions for business men. The statistics presented on the calendar go to prove what everyone knows, that Winnipeg is one of the most attractive commercial centres in Canada.

The B. Greening Wire Company, Limited, Hamilton, Ont., have favored the "Canada Lumberman" with a copy of their 1909 calendar, which takes the usual form of a large pad for office use, with an attractive view of the company's works. The firm are at present engaged in the preparation of new catalogues for all branches of their business, which will be ready for distribution some time in February.

Edward Clark & Son, wholesale lumber dealers, Stair Building, Toronto, have favored the "Canada Lumberman" with a beautiful art calendar for 1909. The calendar is mounted on light green board and is accompanied by a colored picture entitled "Congenial Friends," from an original painting by Wm. Verplanck Birney, A.N.A. The picture is of a group of friends seated about a fireplace smoking, sipping wine and listening to a reading by one of their number. It will be a welcome present to those who receive it.

A meeting of great importance to all who are interested in the lumber trade was called at St. John on Jan. 7th, when a number of prominent lumber manufacturers met members of the Provincial Government with the object of going into the matter of Government protection of forests. The lumbermen desire to obtain a grant from the Government and also want the co-operation of the Government in other protective measures and matters in the same connection.

The British Columbia Lumber & Shingle Manufacturers, Limited, have adopted a new mode of procedure in reference to their price lists, in that their latest standard list, known as "D" list, has been compiled on a higher basis than former lists, prices on same being subject to discount.

WANTED & FOR SALE DEPARTMENT

PUBLISHERS' NOTICE

Advertisements other than "Employment Wanted" will be inserted in this department at the rate of 15 cents per line each insertion, on the basis of 14 lines to an inch, payable in advance. When four or more consecutive insertions are ordered a discount of 25 per cent. will be allowed.

Advertisements of "Employment Wanted" will be inserted at the rate of one cent a word, net. Cash must accompany order.

Advertisements must be received not later than the 10th and 26th of each month to insure insertion in the subsequent issue

assets hereinafter described of the said "F. H. De-
Cew and Son Estate."

The Land consists of an excellent mill or manu-
facturing site in the Town of Bruce Mines, situate
right at the terminus of the Bruce Mines and Algoma
Railway and in a good harbor, and consists of ten
to fifteen acres, surrounded by a twenty three acre
water lot.

On this site there is a twenty five thousand feet
capacity saw-mill, well equipped with the latest
machinery, dry-kiln, machinery for making staves,
railway siding, office building, etc. A large quantity
of valuable trap rock is located on these lands easy
of access, and can be readily shipped to all ports on
the Great Lakes.

In connection with the saw-mill and machinery
there is a full equipment of sledges, wagons, trucks,
carts, camping outfit, chains, blocks and tools.

One hundred and sixty acres of well timbered
lands in the Township of Aberdeen, distant only
some eight miles.

To any person wishing to engage in the lumbering
business or wooden manufacturing of any kind,
these lands and site are particularly desirable, as
Bruce Mines is a centre of a large area where for
years to come an unlimited supply of pine, poplar,
hard and soft wood and other timber can be readily
obtained.

The site above referred to is especially adapted
and suitable for a saw-mill, veneer mill, stave fac-
tory, planing mill or any other kind of wooden manu-
facture, and is exempt from municipal taxes for
about seven years.

Inspection of the property may be had at any time.
Terms of Sale:—10 per cent. cash; 40 per cent.
within 30 days and balance within 60 days. The
tenders must be accompanied by a marked cheque,
payable to the undersigned for 10 per cent. of the
amount of the tender, which cheque will be returned
if tender is not accepted.

The highest or any tender not necessarily accepted.
For further particulars write or apply to the
undersigned.

Dated at Bruce Mines this 1st day of December,
A. D. 1908.

Steel Mill Buildings.

Steel construction, which is growing
in favor among the builders of
modern sawmill plants, is a de-
cisive step toward the goal whither
all woodworking industries are
trending, that of practically fire-
proof construction, says the "Am-
erican Lumberman." It was for-
merly considered the most hazard-
ous risk on the part of insurance
people to insure a sawmill or wood-
working establishment, but now
this can be changed if the steps al-
ready taken are followed up by
others along the same line. With
a steel frame and the boiler and en-
gine room with brick or concrete
walls and floors the average saw-
mill is pretty well started on the
road to fireproofing. There is sel-
dom any great accumulation of dry
lumber in the sawmill and it is
the wooden frame that catches fire
from smoldering sparks in the dust
or in some trashy corner. There
are the floors, of course, and more
or less timber, but a decided step

toward fire prevention is this steel
construction in a sawmill.

Among the woodworking factor-
ies the use of a combination of
steel and brick or steel and con-
crete is an additional step of im-
portance, and while it is not prac-
tically everywhere, in some instances
it is practicable to make a wood-
working institution fireproof.
Where there is room to spread out
institution there are opportunities
of making the place practically safe
from fire. The building itself can
be made proof against it and the
floor also, so that the only damage
that might be done would come
through the burning of stock in the
factory in the process of manufac-
ture or stored inside the building.

By having the storage rooms sepa-
rate there would remain only such
stock as is being manufactured
and there is seldom enough of this
to create much of a fire. Even
where it is necessary to build
buildings two or three storeys high
there are opportunities now with
electric transmission to make them
practically fireproof. The electric
transmission eliminates the neces-
sity of cutting beltholes through
the floors and making draffholes
and connections from one depart-
ment to another that encourage
the spread of fire. There always
remains, of course, the elevator
shaft, but it can be safeguarded
from fire, and if trashy accumula-
tions are kept out of the way,
floors kept clean, and the stock
stored in a separate warehouse the
modern woodworking factory can
be made practically as safe from
fire as the modern office building.

The Chicago lumber record for
the year just closed shows a loss
in receipts of approximately 20 per
cent.; shipments show a decline
of a little more than 20 per cent.
The total receipts for the year were
2,053,639,000 feet, against an ag-
gregate of 2,479,458,000 feet for
1907, a decline of more than 425,-
000,000 feet. From Chicago was
distributed a total of 771,539,000
feet. For 1907 shipments aggre-
gated 977,746,000 feet. The dis-
tribution in 1903 was 1,041,491,-
000 feet, or nearly one-half of the
receipts, which for the year ag-
gregated 2,362,856,000 feet.

According to a decree issued by
the President of Colombia, woods
or timber proper for furniture
manufacture, and including Spau-
ish cedar and mahogany, may be
exported without the payment of
export duty. The duty removed
by this decree was \$2 gold per
thousand. These woods form one
of the most important articles of
export from the Atlantic (or Car-
ibbean) coast of Colombia, and in-
terest in their exploitation is grow-
ing. Three large American com-
panies are now interested in the
extraction and export of cedar and
mahogany from Colombia.

Review of Current Trade Conditions

Ontario.

Continued quietness is the feature of the lumber trade in Ontario. In the Ottawa Valley lumbermen report very few sales during the last two weeks and prices are steady though firm. The only weakness of any sort is in the lower grades of pine, but it is expected that with the improvement in the money market which is already under way the demand for box lumber will increase. There is sufficient demand for lath to encourage the manufacturers in a policy of extensive production for 1909. There is quite a demand for pickets and other small stuff from Michigan. Prices for these are quite firm. Conditions in the woods of the Ottawa Valley are fairly good although there was a serious soft period which threatened to prohibit the use of the rivers as highways. This has been succeeded by a good period of cold weather and many of the large manufacturers are now sending in extra teams. The amount of operations in the woods will be small in pine but probably just as extensive in spruce as last year. In Georgian Bay and Western Ontario conditions remain dull, though there is a little better feeling as a result of the taking of inventories, which show that a better demand may be expected in many short lines before long.

Eastern Canada.

Reports from St. John state that the prices for English deals have improved slightly during the last fortnight. The prospect for business is better than it has been for two seasons past. This is the case in spite of the fact that during the holiday season actual business was rather slight. English spruce deals are now quoted at \$13.50 to \$13.75 f.o.b. St. John. This is a dollar higher than the prices which prevailed at this time last year. Shingles are in strong demand, at prices ranging around \$3 a thousand for dutiable extras and \$2.50 per thousand for dutiable clears. Spruce lath is in fair demand at about \$2.75 f.o.b. St. John for dutiable. There is very little being done in American spruce bring considerably more than \$14.50 f.o.b. St. John. The demand for spruce from the United States is reported not to be quite so brisk. It is reported that some mills are accepting orders at lower prices, although others are inclined not to force sales. A number of the winter mills opened during the last fortnight and are looking for orders. They have been the cause of reducing prices. Frames are fairly firm though sales have been reported of nine-inch and under at \$25. Some of the mills have been ready to accept \$24 rather than see the order go elsewhere. Still other mills are standing for \$26 and expect to get it before long. Planking is in fair demand with fair prices. Random is only in moderate demand but prices are steady, though a few dealers are accepting orders for small random at a slight decline.

Western Canada.

The lumber market has changed little in the last fortnight. Although there has been a good deal of inquiry, buyers and sellers have failed to come together. There will in the near future be a big demand for lumber in Mexico and the probability is that it will be bought in British Columbia, but the local market is holding firm and the buyers will have to meet the prices in order to do business. Australian buyers, however, are taking just as much lumber as ever. All the subsidized steamers are taking full loads and there is a good demand all the time. This, to a large extent, makes up for the slackness of the coastwise business. The business with the prairies remains quiet, although there are many inquiries. The material is being sold at \$12 a thousand at the mill. This

is dimension prices. Little lumber is used on the prairies at this time of year, where work cannot be carried on during the winter, but as soon as spring opens, and even before, there will be a lot of it on the way to supply the demand of the development there.

In limits there has been some movement. One tract of 17 square miles on Vancouver Island has changed hands very recently, both buyers and sellers being local firms. A good price was realized. As soon as the weather improves Eastern capitalists will have many cruisers in the field to look over the limits. Everything points to increase of business throughout the province in all lines, and this is bound to affect the timber business.

Great Britain.

English advices state that the market will probably improve from the sellers' point of view very shortly. Although the new year opened with mixed prospects, the brisk market which was hoped for had not yet arrived and a state of suspense was prevalent. Shippers generally are asking much higher prices than the trade feels inclined to meet at present. There is little indication as yet that English buyers will be able to meet shippers' views, as the building trade in Great Britain is in a state of stagnation. Taking everything into consideration, however, the conditions which prevail are encouraging to the sellers. Liverpool reports that during the last week of the year business was considerably brighter and the holiday season did not seem to have caused much depression, as the demand for most classes of timber was good. The outlook for 1909 is reported as most encouraging. Pitch pine is only in moderate demand but prices are well maintained, in the face of recent advances made by the shippers. Very little hewn wood of any kind is changing hands. Spruce deals have a slightly firmer tendency and white floorings are also showing an inclination to advance. The production of battens has recently been more remunerative to shippers than floorings. Manchester reports a very quiet holiday season. At Hull, orders are coming in very slowly. For the near future there is no prospect of a better state of things and most merchants believe that the improvement will not be really noticeable until the early spring. Prices, however, are being gradually advanced, especially in a few very scarce sizes. At Bristol the quiet condition of business has resulted in several of the wood-consuming concerns shutting down for rather extended periods, one company, for instance, for ten days. As far as can be learned no contracts have been entered into for next season's shipments, although some negotiations are on foot relating to floorings. Business is reported to be as bad as it can be, leaving no margin for importers. Glasgow reports a very quiet market. Stocks on hand are much lower than usual but imports continue on a very meagre scale.

United States.

The frequent prediction that the new year would bring about an improvement in the lumber trade seems to have been well founded. There has been a gradual increase in orders and in enquiries. The inventories which were under way a fortnight ago among country yards have been completed, and the result is a large number of enquiries for lines of stock which have been shown to be short. There has been no important improvement in prices but the buying movement is expected shortly to assume average conditions for this time of year. The demand from the railroads has continued steadily. Northern pine at Chicago is steady

with a good demand for shop and pattern lumber and for wide boards. above \$3.90. Laths are quiet although the price of 1½-inch stock at The demand for cull lumber and piece stuff is rather light. At Buffalo dealers are all expecting an improvement in business, while prices are firm and the demand has held good through the holiday season. In New York white pine is steady with strong indications of a busy trade within a short time. There is an upward tendency in the price for every grade and size. Fir prices in Chicago have shown a slight advance with an improvement in the demand, especially for shop and tank lumber. At New York the buying is confined to small lots, principally for sizing up purposes. Cooperage stock is almost idle in Chicago. The outlook is not encouraging either for slack or tight barrel cooperage. It looks as though the supply were a great deal larger than the demand. The advance of 25 cents on red cedar shingles which was expected at Chicago went into effect during the first week in January. There were very heavy sales of stock in transit even before the beginning of the year and the local situation is as yet unchanged. It is believed that the country yards are short on red cedar shingles and that they will have to buy heavily before the end of March, in order to be ready for the building season. Manufacturers therefore are showing no tendency to make concessions. White cedar is unchanged. In Boston shingles are only in light demand and buyers expect to see a small decline. The retail stocks are large enough to last for a few months yet. Four dollars is the quoted price for the best cedar extras, but there is little being sold at anything New York has strengthened on account of a good demand. The prices are from \$3.50 to \$3.75. Prices for 1½-inch lath are quiet at \$4.

Market Correspondence

Good Outlook in Maritime Provinces.

St. John, N.B., Jan. 9.—In looking backward over the year 1908 there are many features of the local lumber trade and industry which are quite remarkable. Generally speaking the year has been a disappointing one to local lumbering people. It was one which called for extreme caution in buying and operating and required the closest economy in manufacturing expenses and expenditures. The year will long stand out as a landmark of depression in trade, with its attendant quiet in manufacturing and logging circles.

The great factor in the local lumber trade is the manufacture of spruce deals for the English market. The trade in this line has been marked by nothing that could truthfully be called a healthy stimulation. At no time did the demand in the chief distributing centres of Great Britain promise more than, at the best, a nominal price. The year began with the markets in that direction at the lowest ebb, with little of an encouraging nature in sight. The manufacturers of New Brunswick continued the policy of curtailing their logging operations, a policy which the prospects at the close of 1907 seemed to warrant. The result was that the total cut of logs in the province was 40 per cent. less than the average. There was no anxiety to hurry sawing operations, and the consequence was that the mills were late in starting and the manufacturing season of 1908 was the shortest (by from ten to twelve weeks) for many years.

A uniform dulness continued to reign in the English markets all through the year and at no time did prices approach the figures which were current before the depression set in, which was in the spring of 1907. During the autumn the demand for English deals has grown slowly but surely and at present writing the outlook is brighter than at any time in the past two seasons. Local prices have gained some ground, although during the holiday season but little has been done in the way of buying and selling. At present writing an enquirer for English spruce deals would be quoted from \$13.50 to \$13.75 on a specification containing say 50 per cent. sevens and eights, 35 per cent. nines, balance elevens and wides, f.o.b. St. John, two-thirds price for fourths and ends. At this time last year the same enquiry would have met with a quotation of from \$12.50 to \$12.75.

Perhaps the most remarkable phases of the year's trade developed in the cedar shingle business. Prices which prevailed in this line may be truthfully described as extraordinary. Not only did they reach a high level but, instead of the jump being of a spasmodic nature, values continued remarkably high for months. During the hot months lack of stimulation in the shingle trade materialized and, as is almost always the case, prices suffered considerably. It was felt by most of those interested that, considering the high figures from which prices had tumbled, there would be no rally, but, contrary to expectations, the early fall brought a further boost in price and values climbed again to the point reached in the spring.

Cargo after cargo of New Brunswick cedar shingles were disposed of in Boston and vicinity at prices which would leave, at St. John, \$3 per thousand for dutiable "extras" and \$2.50 for dutiable "clears," and in many cases returns showed slightly better figures. At present writing shingles are strong at figures very similar to those quoted above.

(Continued on page 30.)

The Lombard Steam Log Hauler

In the economical transportation of Logs, Lumber, Pulpwood, etc., above four miles on woods' roads the Lombard Steam Log Hauler has thoroughly made good.

It will haul more logs in quicker time and for less money, by far, than can be done by horses with the same outlay.

Bulletin 950 tells all about it. Ask for a copy.

HUTHER BROS. PATENT GROOVER OR DADO HEAD

For cutting any width groove from one quarter inch to 2 inches or over

Can be used on any Circular Saw Material. Will cut a perfect groove with or across the grain. This is the only Dado Head on the market that gives entire satisfaction on all classes of work. No screw adjustment. For different width grooves, simply remove or add inside cutters. Sold by builders and dealers of woodworking machinery in all parts of the United States. Will send on approval, in competition with any other make on the market; if not the best return at our expense.
HUTHER BROS., SAW MFG. CO., Inc., 1170 University Ave., ROCHESTER, N.Y., manufacturers
Circular Saws, Morgan Pattern Lock-Corner Box Cutters, Concave Saws, etc.

The year in the spruce lath trade was marked by little snap during the first eight months. At times the trade was very draggy and prices suffered. Any hurried sale could be made only at the sacrifice of current prices. The autumn brought better conditions; demand grew rapidly and prices stiffened in a gratifying manner. To-day lath could not be bought locally at a less figure than \$2.75 f.o.b. St. John for the dutiable article.

Business in spruce deal for the New York market has had a remarkably poor year. Prices at times were so low as to be almost prohibitive to those located as far away from the trade centres as the manufacturers and dealers of this province. The demand during the year ran almost entirely to 3x8, 3x10, and 3x12, there being little demand for nines, and sixes being practically eliminated so far as local business was concerned.

While the outlook now shows great improvement and a good volume of business is looked forward to during 1909, the change of front in the "American" spruce deal market did not take place until the fall, and during the spring and summer some extremely low prices were offered and accepted. Specifications made up of eights, tens and twelves in about equal portions sold at figures that left not more than \$14.50 f.o.b. St. John. At present so little is being done in this line that it is difficult to name a figure, but there is no doubt that any inquiry would meet with a quotation considerably higher than the figure mentioned above.

The spring of the year 1908 was remarkable for the favorable driving conditions which prevailed on all the principal streams of this province. Few logs were left and the cost of driving operations was quite nominal. As for results, it is many years since the rivers were driven as clean as was the case in 1908.

A feature of the year was the strike among the shingle workers at the local mills, which curtailed the manufacturing season from nine months to two, and resulted in a truly tremendous loss to both men and employers. The result was a victory for the latter.

A feature also was the remarkable fluctuation in freight rates on lumber by schooner from N. B. ports to U. S. ports. As an example, charters were made early in the season on deal to New York at \$2.50 per thousand feet (the lowest figure which has prevailed for a decade), and two months later \$3.50 was asked and given.

Lath Are Active at Ottawa.

Ottawa, Jan. 11.—Local lumbermen have made few sales in the last fortnight and prices have not fluctuated. An outstanding feature of the situation is the firmness of quotations in the face of small buying. The lower grades of pine seem to be the only sorts showing signs of weakness, but large holders contend that the gradual improvement of the money market promises an early demand for box lumber which will affect that and similar classes of pine. The lath market appears to be the most active and the number of orders warrants a large production in the mills next season. Another evidence of coming prosperity for the lumber trade is the good offer by Stewart Harthorne & Company, of Muskegon, Michigan, for pickets and other small stuff. They have made purchases from Gillies Bros., Whitney Lumber Company, W. C. Edwards Company, McLachlin Bros., Sheppard & Morse and Gilmour & Hughson. In some quarters it had been feared prices would shrink from last year, but only in rare instances was any cut made.

The intense cold days beginning January 5th, when the temperature sank to 15 degrees below zero, were welcomed by lumbermen who were beginning to fear that hauling of logs over lakes and rivers would be greatly retarded owing to poor ice. The water had scarcely been well frozen in December when the heavy snowfall covered every sheet of water so as to protect it from further freezing. The hauling for the latter part of December was consequently restricted to the bush roads because lake and river tracks were unsafe for teams with heavy loads. It looked for a while as if the lumbermen would not be able to remove all their logs, but the present cold weather following the thaw in early January has afforded almost a complete remedy.

J. R. Booth and the E. B. Eddy Company are sending away extra teams, the operations of the latter being on the DesMoines and Rouge Rivers. The Eddy Company's spruce logging on Temiskaming is done chiefly by jobbers. Both J. R. Booth and the Eddy Company are logging as extensively in spruce as last year, although pine cuts everywhere are smaller. W. B. Bartram has sent several teams to Nominique, Que., this month, and a few also have been sent to Massey and Kippewa by Ottawa employment agents.

The Ottawa River is rising rapidly and the manufacture of pulp at the Chaudiere has been resumed at Booth's and Eddy's, whose pulp mills are running nearly at full capacity.

The Chaudiere dam, on account of the low water, was pushed forward so rapidly that the contractors, Quinlan & Robertson, of Montreal, expect to complete it by next midsummer instead of December 1st, 1909, as provided in the contract. The main portion of the dam, consisting of 49 piers and two abutments, is now complete and work has been suspended for the rest of the winter. Each pier is of reinforced concrete containing a powerful network of steel rods attached by anchor bolts to the solid rock of the river bed and completed by filling in with concrete. The platform over the piers and the stop logs are all that remain to be placed. A temporary coffer dam which held back the water during the construction of the new one is being cleared away.

Iron Frame "Simplex" Shingle Machine

IN this, our latest design of Shingle Machine, we have incorporated all the advantages contained in our wood frame "Simplex" and added several improvements.

The arbor has been made heavier and a third bearing added to support it outside the driving pulley. The method of putting lead in the saw arbor has been greatly improved. This is now done by swinging on a centre directly under the saw the whole frame which carries the arbor. Thus the alignment of the bearings is not in any way affected and there will be no danger of hot bearings after the lead has been changed. The change may be made while the machine is running and without stopping the carriage.

An improvement has also been made in the method of driving the edger. It is belted direct from a shaft running at right angles to the main arbor from which it is driven by means of a bevel friction. This makes a very neat compact drive and has proved satisfactory in the mill.

The rail on which the carriage travels is made of square steel and when worn can be renewed by simply turning upside down.

Over three hundred of our Upright Machines (wood and iron frames) are in use in British Columbia and Washington.

EDGINGS**Ontario**

Jas. Cameron has put up a shingle mill at Fallbrook, Ont.

The Carnegie Milling Company are building a sawmill at Port Perry, Ont. George White & Sons' new woodworking plant at London, Ont., is now in operation.

McArthur's sawmill at Murillo, Ont., was recently damaged by fire.

The McMaster Lumber Company, Kemptville, Ont., will erect a large sawmill at Hull, Que.

The box factory at Rodney, Ont., is shortly to be enlarged.

The North American Bent Chair Company are making extensive additions to their buildings in Owen Sound.

M. J. O'Brien, of Renfrew, Ont., has formed a stock company to take over the sawmill business of J. D. McRae at Eganville, Ont.

The Evans Company, Limited, have almost completed the erection of a planing mill and sash and door factory in Sudbury, Ont.

P. Kyle is rebuilding his sawmill at Merrickville, Ont., which was destroyed by fire last summer. It will be operated by J. Bigford and John Wilson as a custom sawmill.

The Welland Vale Manufacturing Company's premises at St. Catharines, Ont., including a large stock of hoe, rake, spade and other handles, were destroyed by fire. Loss, \$50,000, mostly covered by insurance.

John McGrath, Peterborough, Ont., is erecting a sawmill at Lakefield. The machinery has been bought, and it is expected that the mill will be ready for operation, with a daily capacity of \$15,000 feet, this month.

The Sanderson-Harold Screen Works, at Paris, Ont., have been destroyed by fire, with a damage of \$50,000. The firm made chiefly screen doors, refrigerators, etc. Over a hundred men are employed. The factory is to be rebuilt at once.

Two brothers, William and Louis Warriher, aged 19 and 22 respectively, were burned to death in a fire which destroyed a log camp in the township of Matchedash. The young men were cutting wood in the vicinity and boarding themselves.

Delahey Bros., of Pembroke, Ont., proprietors of the National Manufacturing Company, which was recently burned out, have taken over the plant of the Cossitt Company, makers of agricultural implements, Brockville, and will make large extensions to the factory.

Ralph Loveland, of the Saginaw Lumber & Salt Company, operating at Thessalon, and Loveland & Stone, operating at Cutler, Ont., estimate the season cut in that district at two-thirds that of last winter, but say it will be much larger than it would have been but for damage done to timber by forest fires.

The Tudhope-McIntyre Company, a combination of the Tudhope Carriage Company, Orillia, and W. H. McIntyre, president of the W. H. Kiblinger Company, of Auburn, Ind., who make a specialty of high-wheel motor carriages, will manufacture this line of goods extensively in Orillia during the coming season.

The City Solicitor of Ottawa has prepared a report on the subject of piling lumber in the area between Preston, Bronson and Somerset streets. The report is a review of all the by-laws passed regarding lumber piling. There was a limit fixed December, 1906, when certain piles should be removed, but in the consolidation of the by-laws over a year ago this clause for some reason was left out. The City Solicitor expresses the opinion, however, that permission needs to be secured for the yards there established.

Recent Ontario incorporations include: The Charters Lumber Company, Limited, East Toronto, capital \$100,000; incorporators, W. C. Charters, S. L. Slade, R. P. Allen, all of East Toronto, and others. Taplin Timber Company, Limited, Toronto, capital \$40,000; incorporators, V. E. Taplin, New Liskeard, Ont., J. P. Langley, W. R. Smyth and M. Peer, all of Toronto. Rosedale Sawmill Company, Limited, Toronto, capital, \$40,000; incorporators, T. H. Hancock, F. H. Hurlburt and Edmund Gunn, all of Toronto, and others. Freeman Lumber Company, Limited, Midland, capital, \$40,000; incorporators, J. Hill, F. G. Hill, J. W. Demorest, all of Midland, and others.

Guy Coulthrop, of Bay City, Mich., one of the members of the Moulthrop Lumber Company, operating a saw mill at Johns Island, Ont., says there is little lumber now being carried on the mill docks in the Georgian Bay district which has not been sold. All the stock on the dock of his company has been sold to Saginaw Valley firms. He estimates that about a two-thirds stock of logs will be put in this winter compared with last, but the mills will be pretty fairly stocked. Conditions for logging are excellent. This company has 400 men in the woods. All the stock on the mill docks of the Eddy Bros. & Company plant at Blind River has been sold. The firm manufactured about 27,500,000 feet last season and are carrying over some logs.

Eastern Provinces

Simard & Mercure, lumber dealers, Montreal, Quebec, have dissolved partnership.

The premises of the Quebec Wood Specialty Company, Quebec City, were destroyed by fire recently.

A Shelburne, N.S., despatch says that it is expected that the Lewis Miller Company will build a large lumber mill at Jordan Falls this year.

The Mount Royal Box & Lumber Manufacturing Company, Limited, Montreal, have sold several lots adjoining their premises to Antoine Viens.

Damage to the amount of \$20,000 was done to booms of the St. John River Log Driving Company by the severe storms during the first week of January.

A young girl named Bernadette Belleau, employed in Rochettes' box factory at Ancienne Lorette, Que., got her clothes entangled in the belting of a machine. Her body was frightfully mangled and her injuries proved fatal.

Mr. G. B. Hall, aged 56, a well-known lumber merchant and prominent Liberal, died suddenly at his residence, Grande Allee, Quebec, on January 10th. Deceased was the second son of the late G. B. Hall, in his lifetime a leading

lumber merchant of the Province of Quebec, and owner of an extensive property at the Falls of Montmorency, including the Kent House.

The Silliker Car Works, Halifax, N.S., held their second general meeting last month, and the statement showed net earnings of \$13,800. This was considered quite satisfactory in view of the fact that works have only been recently started.

T. A. Barnhill's sawmill at Truro, N.S., has been destroyed, together with the property destroyed were a gang-saw, planer, matcher, pony and buzz planer, sanding apparatus, etc.

A. H. Vanwart, Fredericton, N.B., has purchased the sawmill of R. Kirkpatrick at Debec Junction. In the spring the machinery will be brought to Fredericton and will be placed in a new structure to be built by Mr. Vanwart. The mill is fitted with rotary, planer, lath and shingle machines.

The car building firm of Rhodes, Curry & Company, of Amherst, N.S., are buying large quantities of quartered oak lumber for interior finish from the Virginian mills and are shipping this lumber by sea to Halifax. This oak is being used entirely for the finish in the new cars which are being built by the company for the Grand Trunk Pacific Railroad of Canada. The company heretofore have bought all their oak in the New England States.

The St. John River Log Driving Company, Fredericton, N.B., suffered serious loss from the recent floods. The company's sheer booms from Crock's Point, 10,000 feet in length, were stored in the Nashwaak River as usual for many years, and the ice on this river breaking up, the booms were destroyed, a quantity of machinery, which had only been in operation a few days. Among the great timbers of which they were composed snapping like matches. Lewis H. Bliss, manager of the company, estimates that it will require at least \$20,000 to replace the booms, which must be done before the ice breaks up next spring.

Recent Quebec incorporations include: Simplex Floor Finishing Appliance Company, Limited, Montreal, capital \$25,000; incorporators, T. B. Gould, J. T. Hackett and J. W. McDonald, all of Montreal. Floor Planning & Surfacing Company, Limited, Montreal, capital \$100,000; incorporators, T. B. Gould, J. T. Hackett, H. Martin, J. W. McDonald and Kenneth McPherson, all of Montreal. Eagle Lumber Company, Limited, Montreal, capital \$20,000; incorporators, L. Villeneuve, Quebec, and A. Beaupre, V. Martineau and Patrick Murphy, all of Montreal.

Harry Harding, of Musquash, N.B., was drowned recently while trying to save a mill dam at the Inglewood Pulp & Paper Company's works. The water pressure on the gate became so great as to cause fear of its bursting through. Harding bravely walked out along a narrow plank to the dam. His weight resulted in the plank being overturned in the water, where it was under great pressure. Those who were with him could render no assistance. He was carried over the dam and drowned. Deceased was 31 years of age and greatly respected. Since the accident, the freshet has caused the old stone dam on the Musquash to give way and the surrounding land has been inundated.

Western Canada

The Elkirk Match Company, Limited, Selkirk, Man., have obtained a charter. The concern is capitalized at \$40,000.

The lumber sheds, store and office of the William Cowan Company, Prince Albert, Sask., were destroyed by fire recently.

A Vancouver despatch states that the log market on Puget Sound is in an unprecedented condition, as every boom of logs has been sold.

Mayor Evans of Winnipeg proposes that the city should open a lumber camp at the city's limits, at Lac Du Bois, for the relief of the unemployed.

The Wash Sash & Door Company, of New Westminster, B.C., recently reported running time and a quarter, or twelve and a half hours per day.

The Victoria & Barkley Sound Railway Company are applying for a charter from the Dominion and Provincial Governments. The road will run through some splendid timber limits.

Recent Vancouver incorporations include: P. D. Hillis Logging Company, capital, \$100,000; Glen Valley Logging Company, capital \$25,000, and Robinson & Lequime Lumber Company, capital \$15,000.

Seaton Bros., boat builders, New Westminster, B.C., have purchased the Crane yards and will immediately carry out improvements. It is proposed to open a machine shop, wood working plant and, later on, a steel forging plant.

The Fernie Lumber Company's new mill to replace the one destroyed in the recent conflagration, is now in operation, and is cutting and shipping lumber. The entire plant is not yet completed. It will subsequently have a capacity of between 50,000 and 60,000 feet per day.

A. F. Johnson, 703 North Main street, Paris, Texas, proposes to establish a factory in Western Canada for the production of shovel handles, and is enquiring where there is a supply of white or grey ash timber, which is growing scarce in the United States, and is the only timber that can be used in the manufacture of shovel handles.

H. M. Hillis, representing the Hillis Bros., timber merchants, in the Metropolitan Building, Victoria, B.C., took twelve cruisers to Nootka Sound, West Coast, recently. These men will inspect over 120 sections before their return. Messrs. Hillis have sold over 100 sections of timber during the last four months. The prospects in the lumber business are brighter and it is expected that within a short time the activity formerly prevailing will have returned.

Judgment has been given in favor of plaintiffs in the action of the Pigeon River Lumber Company, the Lake Superior Tug Company, Limited, and the Arrow River and Tributaries Slide & Boom Company, against Mr. George Mooring. The Pigeon River Lumber Company appeared in the suit as manager of the other two companies, who were awarded, the Lake Superior Tug Company, \$2,180, and the Arrow River Company, \$1,539, with costs to each. The case was tried at Port Arthur, and arose out of the handling of lumber for the defendant.

A Vancouver despatch says that Portland, Oregon, sawmills have been beaten out of a first instalment sale of 400,000 feet of lumber to the Government by Seattle dealers, who will deliver the material in that city from British Columbia and pay the \$2 per thousand duty on it. The lumber is Douglas fir, intended for the Panama Canal, and is to be loaded on a transport at Seattle to be landed at the western terminus of the canal. Arthur Camwell, who got the contract, is an exporter of lumber from Vancouver Island. The average bid of Oregon firms was \$10 a thousand, and as the foreign manufacturer has to pay the \$2 duty on unloading the lumber in the canal zone, he will really sell the material at \$8 a thousand or less.

This Saw Stands Without a Rival

AND IS THE

FASTEST CUTTING SAW IN THE WORLD!

Its Superiority consists in its Excellent Temper. It is made of "Razor Steel," which is the finest ever used in the manufacture of Saws. We have the sole control of this steel. It is tempered by our secret process, which process gives a keener cutting edge and a toughness to the steel which no other process can approach.

Maple Leaf Saw Set

MANUFACTURED BY

SHURLY & DIETRICH, Galt, Ont.

Directions.—Place the set on the point of tooth, as shown in the accompanying cut, and strike a very light blow with a tack hammer. If you require more set, file the tooth with more bevel.

If you follow directions you cannot make a mistake. Be sure and not strike too hard a blow, and it will set the hardest saw. On receipt of 40 cents we will send one by mail.

We are the only manufacturers in the world who export Saws in large quantities to the United States.

We Manufacture

HIGH GRADE BAND SAWS

Of All Widths and Lengths.

These Saws are made of Refined Razor Steel, and tempered by our Secret Process; for Fine Finish and Temper are not excelled.

There are more DISSTON BRAND Band and Circular Saws used than any other make, and by a large majority.

WHY?

Because millmen and sawyers recognize by the use of the DISSTON SAWS they obtain the greatest results for the least cost.

WE MAKE THIS STATEMENT WITHOUT FEAR OF SUCCESSFUL CONTRADICTION.

POINTS OF MERIT

MATERIAL

FINEST
CRUCIBLE STEEL

UNIFORMITY.
TOUGHNESS.
GREATEST TENSILE STRENGTH AND ELASTICITY.

**HARDENING
AND
TEMPERING**

DISSTON
METHOD

Being Manufacturers of our own steel, and thoroughly familiar with its makeup, we are able to absolutely adjust the hardening and tempering processes to the degree giving that perfect combination of hardness and toughness that produces the "edge, tension-holding and standing up qualities" for which the DISSTON SAWS are renowned.

GRINDING

DISSTON
METHOD

By the DISSTON METHOD all Band Saws are ground perfectly flat and uniform in thickness, thus making possible a very close adjustment of the guides without creating any friction or heat when in operation at the highest rate of feed; and all Circular Saws, whether tapered or of even thickness, are perfectly flat ground on the surface, thus insuring in all saws perfect clearance and true balance.

TENSIONING

DISSTON
METHOD

The uniformity of the material, temper and grinding is a large factor in the proper adjustment of tension; and this, together with the Disston process of tensioning, is the reason why the DISSTON SAWS will manufacture more lumber, under the same conditions, than any other brand of saw.

In the DISSTON BRAND of SAWS you have the advantages of the product of a progressive, up-to-date saw factory, the LARGEST IN THE WORLD, and where saws are made throughout, from the making of the steel itself—the superiority of which has been demonstrated for the past fifty-three years—to the finishing operation, and each process is performed by mechanics of long experience and highest order of skill.

"THE DUNBAR"

New and Improved

STEAM LOGGING ENGINES

Best on the Market

This is the machine for which we claim all the good Qualities possessed by any other and a great many valuable improvements besides.

This time we wish to call your attention to one of many important points which prove conclusively the superiority of the **Dunbar Logging Engines**: that of the Hydraulic Apparatus for raising and lowering the Boiler, an invention of our Mr. Dunbar, Sr. (for which patents are pending). By this device all danger from rush of water to either end of the Boiler, caused by irregularities of the road, is avoided. One of the most serious drawbacks in other Engines is the fact that the Boiler is stationary on the frame, consequently a source of great anxiety because of the danger to both the Crown Sheet and the Tubes. You can readily understand that in going up or down hill either the Crown Sheet or the Tubes are bared, causing them to become so heated that they will leak badly, and after repetition for a time the Boiler will be practically ruined.

This improvement, which supersedes our previous method for raising or lowering the boiler, has been added since cut herewith shown was made.

Should you contemplate putting in a Logging Engine we shall be glad to take the matter up with you and give you all particulars.

Quotations for Logging Sleds furnished.

IT WILL PAY YOU TO INQUIRE INTO THE MERITS OF OUR

New Tie or Log Siding Machine

It slabs both sides of the logs accurately and rapidly at the one operation. Both saws movable to or from the centre simultaneously by means of a lever within the sawyer's easy reach, and the spacing indicated on a quadrant in plain sight. This machine will cut over 3,000 ties in ten hours. In any mill using a Gang, this machine, if used for preparing the cants, will increase the output 20%. It is a compact machine, strongly built, as the cut indicates, to withstand hard and continuous usage. It is without an equal, let alone a superior, in this line, because it meets the requirements perfectly. Let us have an opportunity of sending descriptive matter, and price.

Hand Feed Shingle Mill**

JOHN H. CRANE •
 Manufacturer of Lumber and Shingles
 DELOACH MILL MFG. CO., MONTEREY, ALA., JULY 2, 1907.
 BRIDGEPORT, ALA.

GENTLEMEN,—I purchased from you in 1905 a "Prince" hand feed shingle machine. I have operated it and find it all you claim for it. We cut at the rate of 30,000 shingles in 10 hours and made first class shingles. I consider your machine a very light running machine. If I wanted another hand machine I would certainly buy a DeLoach Prince.

With best wishes for your success, I am

Yours very truly,
 JOHN H. CRANE.

A Popular Cutter Head for a Popular Service

That of matching single tongue and groove flooring, ceiling or plank, with bits interchangeable and readily set up by a standard gauge to bring all the tool edges into equal cutting relation around the head centre. This forms first of all a perfect cutting tool wherein every cutter does its share of the work—no more. The cutters "being circular and secured to incline bit seats establishes a system of perfect edge and point clearance, enabling them to cut in any lumber without binding or burning the wood.

Every practical man should understand the use of THE SHIMER CUTTER HEAD. We publish a large catalogue giving full description of the tools as well as many hints to practical men. Send for a copy free. Address

PETERBORO SAW MILLS

"Hamilton" Lath Mill

This is the mill that cut over 17,000 pieces of Lath in one hour, a short time ago.

We guarantee a capacity of 60,000 Lath per day.

The frame is all of iron, heavy, rigid and strongly braced.

The table is extra wide so that any unfinished bolts can be passed back to sawyer.

It carries six 14 in. saws.

We build a complete line of Lath Mill Machinery to suit any requirements. Get our special catalogue.

Let us quote you on anything you need

Edgers

Our Garland Gang Edgers are made in all widths, with any number of saws to suit requirements.

They work in all kinds of timber.

Like all our machinery they are strong and durable, specially built for fast and accurate cutting.

We have a special catalog of Edgers, too. May we send it to you.

High Grade Long Leaf Yellow Pine

The superior quality of our stock is not an accident. It is a result of a sound business policy. First, we made sure of an adequate supply of the Best Long Leaf Yellow Pine Timber in the south. Next, we equipped ourselves with modern facilities. These are the reasons why our dressed stock is meeting with such favor everywhere. Special facilities for handling Canadian trade promptly.

We are in a position to get out timbers up to 36 ft. in length and to surface sizes up to 6 x 12. All timbers larger than 6 x 12 we can arrange to have dressed in transit.

CAPACITY 40,000,000

New York City
Guy E. Robinson, 1123 Broadway

A word to the Trade about Hot Air, 3,000,000 a day shingle advertisements

The FULL daily capacity of the 200 shingle machines in British Columbia is 4,000,000 shingles. On an average during the months of operation about ten per cent or more of these machines are idle ; and it is also well within the truth to state that almost the WHOLE Shingle Industry of the Province is closed down tight from three to four months during every year ; and the local consumption of shingles in the Coast cities and towns—about 300,000 per day, must be deducted from the rail shipping capacity ; also as shingles are now being marketed, it is safe to state that fully one-third of the out-put will be sold by manufacturers DIRECT to the retail trade. The net result of the above is about 2,200,000 B.C. Shingles per day available for rail shipment, and to be divided amongst ALL the brokers and wholesalers in Canada and the United States who handle our shingles.

From the above facts, Lumber Dealers can judge for themselves as to how much truth there is in an advertisement which states a SHIPPING CAPACITY of 3,000,000 shingles daily.

We are the OLDEST established strictly Wholesale Lumber Dealers in British Columbia, and are in a position to supply the Trade with their lumber and shingle requirements.

SIMONDS

Crescent-Ground Cross-Cut Saws

This is the identical Crescent-Ground Cross-Cut Saw which has for years been recognized as the best made or used in the United States. Since beginning the manufacture of these saws at our Canadian factories, we have found and are supplying a greatly increased demand throughout the Dominion. The Saws are made of Simonds Steel, and Simonds Steel is the best saw steel made. They run easy, cut fast and give good results. Sold by the hardware trade or direct from our offices.

Every Saw Covered by an Absolute Guarantee

We are Specialists on Lumber and Saw Mill INSURANCE

FOR OVER THIRTY YEARS we have made a close and constant study of this specialty, embracing not only "The Best Protection at the Minimum Cost" in the sense of Policies in the Strongest Companies at the lowest possible rates, but the enhanced Protection of such Policies so worded as to Insure you under whatever form of sale or undertaking you may make with your customers, unaware as you may be of the application of the Canadian Insurance Law in such instances.

We invite inquiry as to the above and our "ADVICE SHEET" system which we originated several years ago for the special convenience of our Lumber Customers.

We personally inspect each of the plants we insure at least twice a year.

Canada, United States and Great Britain, \$2.00 per Year, in advance; other foreign countries embraced in the General Postal Union, \$3.00.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Special care is taken to secure for publication the latest and most trustworthy market quotations throughout the world, so as to afford to the trade at home and abroad information on which it can rely in its operations.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Price Cutting and Other Evils

In one way and another during the period of business depression which prevailed in the lumber business throughout last year, the "Canada Lumberman and Woodworker" has tried to impress upon its readers the simple but oft-ignored truth that price cutting should be discouraged, and that one of the most effective methods for bringing about better business conditions was to refuse to accept prices which were so low as to mean a loss both to the manufacturer and retailer. It has taken a long time for the importance of this to reach home in some quarters, but it is more generally recognized to-day than a few months ago, and it is expected that this spring will see the last of the depressing conditions which have been prevalent.

In the retail business, this price cutting has been accompanied by many other lesser evils, which have had their share in the causing of business depression. Bad business methods are responsible for more serious trouble than they are generally given credit for. One class of retailer will say that he is too busy when he has been told that he should introduce improvements. In his yards one will see many a badly kept pile and will note also that there are numerous evidences of material going to waste which could be saved if there were a systematic method of taking care of the yard. There are men who will always be too busy to attend to matters of this kind, and there are other men who will always find time to see that they are properly attended to. Even in dull times the former will be so busy in his own mind that he cannot look after the small things nor give instructions to have them properly attended to. Such a man is always busy but his business and his profits never increase. He has reached the limit of his capacity and must sooner or later fall behind. There is another class of man who always puts things to rights wherever he goes, and does it so automatically that no time is lost. This

man is always ready when there is a chance for increasing business. He gets the business and is able to handle it.

A lumber yard in order to be in proper condition for doing a capacity business should be kept in the most systematic manner. The piles should be carefully cared for and no waste should be allowed by the leaving of fallen boards on the ground. There are a thousand and one suggestions occurring to the dealer for keeping his yard in good condition and he should act upon them quickly before allowing something else to interfere. It would be a difficult matter to name a yard which is kept in an ideal manner. Even well kept yards are scarce. One will find evidences of waste in many directions. Loads of dimension and boards are to be seen in many a yard which have become cracked or been broken and which are allowed to go to waste as though there were no such thing anywhere as a handsaw. They become dirty and are thrown into a common pile. What becomes of them it is hard to say, but it is not stretching the point very far to say that in their neglected state they become, not only a loss to the dealer, but a material addition to his fire hazard.

A man who has seen probably more retail lumber yards than any other, was talking upon this subject recently and drew attention to a number of the evidences of waste which he frequently came upon. A matter which he referred to particularly was that of allowing doors to be stored in places where they were injured by exposure to the light. Stock doors, he said, should not be permitted to stand. They should be piled carefully and the top door covered with building paper, cloth or lath. Molding, too, was a line which he had seen going to waste in large quantities. It is allowed to become covered with dust and dirt and is handled in a manner which results in much of it being spoiled. Summing the matter up the same authority said: "Wherein, then, should we aim to improve? In stopping waste, which implies good sheds and the proper care of stocks. In so serving our customers that it will be a pleasure for them to come again. In treating our competitors as we would wish them to treat us. In having the backbone to ask, and to get fair prices." Here are the principle points in the good management of a business. If they were followed by most retailers there would be little to fear in dull times and good times would be a feast for everyone.

Canada's Strong Position

The "Southern Lumberman," of Nashville, Tenn., takes issue with the "Canada Lumberman" on the subject of a recent editorial entitled "Reflections on the Tariff Issue." The editorial in question discussed the Canadian point of view in regard to the tariff on lumber entering the United States and also referred to the stand taken by Mr. Edward Hines, showing that the position he took before the Tariff Committee and the position he is reported to have taken a month later were opposed to one another, inasmuch as on the former occasion he wished to have the tariff maintained and on the latter occasion wished to have it removed. The "Southern Lumberman" takes the matter much too seriously in imagining that the editorial was the result of an outburst of anger on the part of the "Canada Lumberman." Mr. Hines' views are not of much importance in the long run, as no doubt the United States Government will take whatever steps it considers best for the general advantage of the country. Mr. Hines' views were cited for the purpose of showing that consistency is a jewel just as rare in the United States as in Canada or in any other country, and that a gratuitous scoff on the part of the "American Lumberman" regarding the desire of Canadians to invade the United States market was uncalled for by the facts and was based upon a mistaken idea of the case.

The matter simmers down to this, that Canadians have a whip hand in the matter of lumber production because they have the natural resources. If the United States does not wish to face Canadian competition in lumber they will retain the tariff and the Canadian timber will benefit by the prevention of exploitation by United States capitalists and speculators. On the other hand, if the tariff is removed it may be that Canada will suffer by the wholesale cutting of her timber, but she will have herself to blame very largely if she does not take the necessary steps to prevent it. It will be within the power of the Canadian Government under such circumstances to take speedy measures for the prevention of such destruction of timber resources by imposing an export duty on lumber similar to that which the United States may remove. Both countries

desire to preserve their timber resources, and it would be just as natural for the Canadian Government to impose a duty as for the United States to remove it. As to the other matter, the accuracy of the report relating to Mr. Hines' views, the "Canada Lumberman" refrained from stating that Mr. Hines had gone back on his former position and was content with simply reporting the interview as published in the press. This

interview was no "vague" matter as supposed by the "Southern Lumberman." It appeared in several of the Chicago newspapers at the time of the report of the merger of the Weyerhaeuser, Cooke and Hines interests. It was also published in a number of the other United States and Canadian newspapers, and, so far as the "Canada Lumberman" knew, had not been publicly contradicted.

An Experience in Advertising

Not many years ago the A. A. Griffing Iron Company was an important trade factor on the Pacific coast. Its advertising was extensive, systematic and practical. To-day the A. A. Griffing Company is unknown. There is a reason for this, of which the company's former advertising manager, Mr. S. E. Bryner, tells in the September number of the Selling Magazine of New York. He says:

"My judgment relative to the use of advertising space in trade papers is, be liberal. The keep-it-down-to-a-quarter-page policy is by far the most expensive in the long run, as I have just warrant to assert from personal experience. No breach of confidence or business etiquette will be violated if I quote here a few facts in regard to the effect of ceasing trade paper advertising by the old, well-established and thoroughly reputable A. A. Griffing Iron Company, well known from the Atlantic to the Pacific. For a number of years I had charge of the publicity department of that company, and made careful note of the results of some types of advertising while it was yet aggressive. When

it ceased altogether to advertise, which was about eighteen months previous to the time it passed into the receiver's hands, I instituted a check system, whereby I could note the falling away of inquiries. During the first three months there was no appreciable difference; by the end of six months the inquiries had dropped off about 50 per cent.; at the end of nine months this was increased to approximately 75 per cent.; and by the end of the year they had virtually ceased, so far as new names were concerned. Now, here was a house whose product had enjoyed most liberal advertising during a considerable term of years, and one would quite naturally assert, with some degree of justification, too, that they could not so effectually drop out of existence in a period equal to about one and a half years, that practically no new names would be coming in through the mails. Yet, that is precisely what happened. I merely quote the above facts as prima facie evidence of the unquestioned value of an aggressive and perpetual campaign of advertising on the part of any manufacturer who would woo and win

Tariff Campaign Carried into Canada

The length to which some people will go in their efforts to obtain their own ends is remarkable. The latest instance in the lumber business is afforded by the appearance in Toronto during the last few days of representatives of United States manufacturers who are seeking for the removal of the duty of \$2 a thousand on lumber. The campaign which is being carried on by those who desire to see the duty remain has been so vigorous that those who are opposed to it—and who in many cases are interested in Canadian timber—are anxious about the outcome and are working up a counter campaign. They have sent their representatives into Canada to look for support. Possibly they will find a small measure of support from some Canadians who have not much to do at present, but saner minded Canadians will be inclined to look upon this move as savoring a little of audacity. After all, the matter is a concern of their own, purely, for the manufacturers and dealers of the United States. The lumber industry of Canada can stand pretty firmly on its own legs. With the handicap of a \$2 duty it has been able to flourish and to invade United States markets quite extensively. No doubt it would do better still without the duty, but looking at it from a business point of view, Canadians might kill the goose that lays the golden eggs, if they found free access to United States markets. The advocates who are seeking Canadian assistance in their campaign against the duty may indeed find that such a weapon would become a boomerang. If a tariff revision committee of Congress were persuaded that Canadian manufacturers of lumber wanted the duty removed, they would be justified in fearing injury to the United States manufacturers, and in leaving the duty as it is.

The opinions of those who favor the removal of the tariff contain a number of interesting points. They are well outlined in a letter from Mr. J. W. Wells, of Menominee, Michigan, which is in part as follows:

"I am interested in mills and stumpage on both sides of the boundary, although much heavier on this side than in Canada, and can, I think, give a disinterested opinion. The most important point seems to be whether or not the price of lumber to the consumer will be reduced by the reduction in tariff. I think there is no doubt but that it will and, paradoxical as it may seem, without much reducing the manufacturers' selling price. We would accomplish this by taking advantage of our geographical situation. Georgian Bay lumber would go to the nearest market, largely to the Eastern and Middle States. Minnesota pine into the Winnipeg territory; Wisconsin and Michigan hardwoods, of which Canada has but little, would go all over Canada. We must remember that we must meet Canadian competition anyway; they much market this sur-

plus. Why not let it in under favorable freight rates, giving our consumer the benefit and replace their lumber with ours in other markets where our lumber has the favorable rate? The south could replace Canadian lumber in the West Indies, Cuba, Mexico and like territory with their cheap freight rate. Why compel Canada to ship their lumber 2,000 miles to the West Indies to compete with the lumber from the south when the same lumber could be used by us at their back door, and we be compelled to ship lumber from the south or west at very high freight rates to the same back door, charging all this excess to our consumer? I own a good deal of unsold lumber in Canada to-day that would go to an American consumer for less to him with duty removed. Increased supply over widening territory at lower cost will always reduce and create uniformity of price. It would have been much better if Canadian lumber had been let in free to supply the abnormal demand existing during 1906 and 1907, which caused such overproduction with its attendant evils.

"The question is asked: 'Can we compete with Canada?' The answer is: 'Yes.' We are competing with her now in the markets of the world, and if so, we can certainly compete with her on our own soil.

"It is amusing to hear the one-sided testimony before the Ways and Means Committee in regard to lumber schedule. Mr. Tift, of Georgia, says: 'It is not a question of price, but of market.' Price will always make a market. Mr. Hines, in his very able argument for high tariff, says he cannot compete with Georgian Bay lumber at Buffalo, Pittsburg and St. Louis territories, as the freight rates are against him, and gives the following figures: Canadian lumber against American lumber, delivered Buffalo, freight Georgian Bay to Buffalo \$1.75, duty \$2; total, \$3.75. For Canadian lumber delivered at Pittsburg, freight from Georgian Bay to Cleveland, \$1.75; freight from Cleveland to Pittsburg, \$1.50; duty \$2; total, \$5.25. For Canadian lumber delivered to St. Louis: Freight from Georgian Bay to Chicago, \$1.75; duty, \$2; freight from Chicago to St. Louis, \$2.50; total, \$6.25. Mr. Hines gives the total for lumber delivered St. Louis at \$5.25, but he evidently made an error of \$1 in addition and he is also wrong in his comparison. He is comparing cargo shipments with car shipments. The former, in lots of usually 600,000 to 800,000 feet, millrun stock, must be unloaded and handled through a yard at some lake point, say in Mr. Hines' Chicago, Buffalo and Cleveland yards, sorted into probably 150 different grades, widths, lengths and thicknesses, piled and dried. After remaining in pile several months it is taken down, planed and worked to all kinds of material, and sold. Mr. Hines is not noted as working for fun and would not expect to stand

the expense of handling this lumber for less than \$5 a thousand feet to pay him for yard rent, sorting, piling, insurance, taxes, interest, depreciation, bad debts and profits on the operation. Five dollars is small enough. The car of lumber from the south or west which Mr. Hines compares with Canadian cargo does not have to stand this heavy yard expense. It has been produced from stump to car at the originating point cheaper than Georgian Bay lumber has been produced from stump to boat at its originating point. When Mr. Hines gets through with his Canadian cargo it will stand him about the following prices for deliveries: I have added 25 cents more freight than Mr. Hines has, as his figures are too low by at least 25 cents for the last ten years' average. Lumber delivered in Buffalo: Freight from Georgian Bay, \$2; duty, \$2; Chicago yard expense, \$5; total, \$9. Mr. Hines says he can deliver Wisconsin lumber in Buffalo for \$7. Lumber delivered in Pittsburg will stand him as follows: Freight from Georgian Bay to Cleveland, \$2; duty, \$2; freight from Cleveland to Pittsburg, \$1.50; yard expense in Cleveland, \$5; total, \$10.50. Mr. Hines says he can deliver lumber from Wisconsin to the same point for \$7. Lumber delivered at St. Louis will figure as follows: Freight from Georgian Bay to Chicago, \$2; duty, \$2; freight from Chicago to St. Louis, \$2.50; yard expense Chicago, \$5; total for Canadian lumber delivered St. Louis, \$11.50. Mr. Hines says he can deliver lumber from the south for \$8.10. A carload of Canadian lumber would draw a crowd at a sideshow in St. Louis, although he says it can compete with southern lumber at that point. In the same issue of the 'American Lumberman' reporting Mr. Hines' testimony before the committee when he said that Canadian yellow or Norway pine could compete with southern yellow pine as far south as St. Louis, a correspondent from Toronto said 'Southern pine is not only maintaining its strength in Ontario, but is taking the place of Norway pine.' For the sake of fair play, abolish the tariff and stop this game of shuttlecock between Toronto and St. Louis at the consumers' expense.

"As to the cost of stumpage in Canada and the United States, there is but little difference. Late sales by the government have been on a basis

of \$11.50 to \$12, log scale. Cost of logging in Ontario is at least \$2 a thousand more than in Wisconsin and Michigan, caused mostly by roughness of the ground, labor and supplies being somewhat higher also.

"The cost of sawing at our Georgian Bay mills is at least 20 per cent. more than in our Wisconsin and Michigan mills, caused mostly by higher wages to millmen and high tariff on mill supplies and machinery. We pay a duty of 30 per cent. on machinery and supplies, and the Canadian manufacturers take full advantage of it by adding the duty to their cost price.

"As to conservation of our forests, free lumber will help by preventing exorbitant prices, which induces cutting of small trees. There was never so much deforestation as was practised during high prices of 1906 and 1907. Millions of young pine, spruce, jack pine, etc., were cut for lumber and lath that at normal prices would be left to grow to fair size.

"There has been a great deal said about the effect of the tariff on low grade timber. The tariff has nothing to do with it. I have lately been through many operations in the south. They are practically clearing the land, which present prices of stumpage and lumber warrants, and about the only thing left is the small trees, which, with prices as they were in 1906-1907, would now be cut, instead of being allowed to grow to fair size. In the north we are practically clearing the land; most of my mills are cutting the cord wood, and the lower the price for lumber the more careful we are to economize by saving everything to make ends meet.

"As to the Pacific coast: If the tariff was \$10 a thousand they would not cut clean. Whether the price be high or low, the waste goes on. Many of their largest mills use the circular saws, which waste three-eighths of the timber in sawing inch boards, as against one-eighth waste with modern band saws, but their stumpage has cost them next to nothing which is the cause of the waste. So we need shed no tears over them. The only party that can possibly be adversely affected by the removal of the duty is the stumpage owner, and where there is one stumpage owner there are probably ten thousand consumers that will reap the benefit."

Competition of Canadian Lumber Feared

A meeting of the board of governors of the National Lumber Manufacturers' Association of the United States was held recently at Washington to discuss the tariff issue. The matter was discussed from many points of view, and the unanimous opinion was in favor of the adoption of a resolution opposing a reduction of the tariff. A resolution was therefore drawn up and adopted which embodies the reasons held against the proposed removal of the duty. The resolution will prove interesting to Canadians engaged in the lumber business. It is as follows:

Whereas, the press dispatches from Washington, forecasting the probable action of the Ways and Means Committee on the various tariff schedules, recite the fact that lumber is being named as one of the commodities to go on the free list, or to sustain a heavy reduction, and

Whereas, such action would mean serious and widespread demoralization to all business interests, in that further depression in lumber prices would permanently cripple many of the sawmill and other woodworking industries, and at the same time affect disastrously the wage earning power of a vast army of day laborers, and

Whereas, the lumber industry of the United States to-day ranks first in the consumption of farm products, third in the volume of tonnage furnished the railroad and transportation line, and second in the employment of labor, agriculture alone employing a larger number of hands, and

Whereas, a bushel of corn, or wheat, a ton of hay, a bale of cotton, or any other farm produce will purchase more lumber to-day than at any previous time, and

Whereas, the present specific duty of \$2 a thousand feet amounts to an ad valorem tax of about 11 per cent. and reduces the tariff on lumber to the basis of a tariff for revenue only, as illustrated by the fact that the present law represents an average of about 40 per cent. on all dutiable commodities, and

Whereas, the repeal of the tariff on lumber, lath and shingles would prove disastrous to the industry throughout the whole country for the reason that lumber produced in Canada, and that which would be produced in Mexico, is largely by Oriental and peon labor at a cost far below that in this country, and cut from stumpage varying in price from one-

quarter to one-half less than American timber, and at a vastly less tax, and

Whereas, lumber lath and shingles from Canada can be delivered in the Atlantic, Pacific and Great Lake states ports on a much lower freight rate in foreign and American bottoms than we have from the south and west, or from any other lumber producing district to the same ports, where much of the American lumber is marketed and consumed, and would therefore deprive American manufacturers of many of their principal markets, which in turn would seriously affect the banking, shipping and other interests allied with lumber, and

Whereas, the recent election has emphatically demonstrated that an overwhelming majority of the people are in favor of the protection of American industries, and believing that the disturbance of existing tariff would result to the extreme detriment of American capital and labor, and

Whereas, the class of lumber which our foreign competitors would seek to dump into the markets of the United States would prevent the conservation of our forests, which should be utilized to the fullest possible extent; therefore, be it

Resolved, First, that the National Lumber Manufacturers' Association, in convention assembled, representing the lumber interests of the United States, do most earnestly protest against any change in the present tariff on lumber, lath and shingles;

Resolved, Second, that the president and secretary of this association be, and they are hereby instructed, to transmit a copy of these resolutions to the Ways and Means Committee, and furnish the senators and representatives in Congress with a copy of same, requesting their support and co-operation with that of their own people to prevent any repeal or modification of the present lumber schedule of the Dingley tariff, upon the ground that the lumber industry of the United States has become an integral part and so interwoven with the banking, transportation, shipping, railroad, manufacturing, commercial and industrial interests that any legislation harmful to lumber would sooner or later disastrously affect labor and every other interest;

Resolved, Third, that we favor the conservation of the forest re-

sources of this country and stand ready to co-operate with the forest service of the Government for the promotion of this great principle; yet we assert that the removal or reduction of the present tariff on lumber will hasten rather than delay the destruction of our forests and defeat rather than accomplish an enlarged and more successful practice of this great work already inaugurated. We predicate this statement upon the fact that the average sawmill to be operated successfully must cut at least its minimum capacity. If, therefore, the mill man is compelled to leave 25 per cent. of the trees in the woods to rot and burn that he now uses, because of no market for the manufactured product thereof, he will find it necessary to cut approximately 25 per cent. more trees to keep his mill logged and make good this shortage, and in equal proportions reduce the forest area of this country 25 per cent. faster.

The argument in the last clause of the resolution is so wonderfully conceived as to be difficult to understand. How it can be that the prevention of the cutting of United States timber will result in the timber resources being destroyed is not clear. There would undoubtedly be more Canadian lumber consumed in the United States if the duty were removed and one would think that this would mean less cutting of United States timber. But according to the resolution it would mean increased cutting as the sawmills, being hard put to sell their material, would waste about 25 per cent. of the timber cut, and would at the same time have to cut at least enough to keep their mills going to their minimum capacity. The more logical conclusion would be that competition would force out of business those mills which could not find enough business for their minimum capacity and that there would be a proportionately smaller cut. The question is not of much importance to Canadians, except inasmuch as it shows to what extremes the opponents of the reduction of the tariff are being driven in order to maintain their case.

In the Courts—Recent Legal Decisions

Conversion of a Shingle Machine.—Chief Justice Mulock recently gave judgment in a Divisional Court of Ontario in the case of the Utterson Lumber Company v. H. W. Petrie, Limited, in which the plaintiffs appealed from a judgment dismissing an action for the conversion of a shingle machine. In the judgment Chief Justice Mulock stated that according to the evidence, H. W. Petrie had supplied to one J. M. Bird a shingle machine upon certain terms which included \$200 in cash and the balance in instalments, with ownership remaining with the defendants until completion of payment. Mr. Bird had sold his mill to the Messrs. Martin, and the latter had sold it to the plaintiffs. Subsequent to the last sale the defendants had removed the machinery from the mill, whereupon the action had been brought. The court held that under the terms of agreement for the sale the defendants were justified in the course they took and the appeal therefore was dismissed with costs.

Shareholder's Application to Wind Up Lumber Company.—Chief Justice Wetmore, of Saskatchewan, recently gave his decision in the case re Nelson Ford Lumber Company which came before him. Application had been made under the Winding Up Act of the Dominion of Canada on behalf of Grant Robinson, a shareholder in the company, to have a liquidator appointed and the company wound up. The question was raised whether this application could be made under the Dominion Winding Up Act. The Chief Justice held that the company could not be brought before the court under the Dominion Winding Up Act, inasmuch as it did not come under either of the clauses providing for such a course. An attempt had been made to show insolvency but the evidence was of a very vague character. Inasmuch as he thought that the application could have been made under the Companies Winding Up Ordinance, he declined to entertain the application, but made no order for costs.

Payment for Tie Driving.—The case of the Pigeon River Lumber Company v. Mooring which recently came up for trial has been concluded and judgment has been given by Judge Britton. The action was taken by three companies for work done, services rendered and materials supplied to the defendants in respect of certain ties. The claim of the Pigeon River Lumber Company was only a small one. The claim of the Arrow River and Tributaries Slide & Boom Company was for driving and running ties belonging to the defendants over their improvements on the Arrow River and Pigeon River and for dues for the use of these improvements. The claim of the Lake Superior Tug Company was for towing these ties from the mouth of the Pigeon River to Port Arthur. The defendant claimed that he made no use of the improvements, and even if he did the company could not recover, because of non-compliance with the requirements of the statutes in such cases. Judge Britton held that the defendant did make use of these improvements and was liable for the same, and he found that the amount charged therefor was reasonable as it was less than the amount of toll the company was entitled to charge under the statute. The company was therefore entitled to recover \$2,180 with costs for the use of the improvements. The Lake Superior Tug Company was given judgment of \$1,539 with costs for towing the ties.

An Under Cutting Circular Sawing Machine

An invention which will be of much interest to lumber manufacturers has recently been perfected by Messrs. John Gillies and William Douglas, of Braeside, Ont., in the form of an "undercutting circular sawing machine." A number of practical and experienced manufacturers have seen the machine in operation and speak of it with enthusiasm. After a thorough course of demonstration as to its working qualities, the machine will be put into operation next spring. The illustration shown herewith does not afford a very good idea of the machine on account of the fact that it was installed temporarily and the posts and other obstructions prevented a good view from being obtained.

The principle on which this machine is constructed is to feed the log to be sawn, to the saws, in such a way that the saws cut with the grain of the wood, thereby ensuring easier cutting and less pressure on the saws than if cutting against the grain or end wood. To obtain this end, the logs, when being fed to the machine, pass under the arbor, instead of over. Consequently the log and the saws travel in the same direction, instead of in opposite directions, as is the case when fed to the saws over the arbor.

The gang circular is simple in construction and consists of a double frame, the lower frame carrying the four feed rolls only, and the upper frame carrying the saw arbor and saws only. The feed rolls are driven

Under Cutting Circular Sawing Machine invented by John Gillies and Wm. Douglas of Braeside, Ont.

from below by face plate and friction, with chain feed connecting with second feed roll, and the rolls are continued in motion by gears. The speed of the feed is regulated by the friction and face plate to which the chain feed is connected, and can be immediately reversed so as to back the log out of the machine, if necessary.

The binding rolls are contained in a sash or frame, to which the screw is connected at the bottom, and with face plates and friction placed below the floor which controls them, and connected with levers. The binding rolls can be raised or lowered from a cant of two inches in thickness, to a height of fourteen inches, if desired. The sides of the sash or frame carrying the binding rolls are slotted to allow them to work freely on the outside of the feed rolls (the ends of which project through them), when the sash or frame is being raised or lowered by the screw and friction which operate them. The pressure of the binding rolls is obtained by spiral springs placed between the top of the yoke which carries the binding roll boxes, and the inside of the top of the sash or frame which contains the binding rolls.

The arbor is constructed of 3½-inch steel, carried on three bearings. On one side of the arbor is a solid collar, and the arbor where it carries the saws is feathered and a groove is cut in the saws corresponding with the size of the feather in the arbor. Collars eight inches in diameter, and varying in thickness according to the thickness of lumber desired to be cut, are placed between the saws. The collars are held in place by a strong threaded nut. The arbor boxes are adjustable, so that the arbor can be lowered according as the saws decrease in size from filing and wear. The outside bearing is carried on a removable bridge which can be taken out quickly by taking out a jib key at each end of the bridge. The bridge is then slid out on to an attachment on the side of the machine.

The saws can be removed and replaced in from five to seven minutes. When the saws are in place, the bridge is so constructed that it passes into place by giving it a slight shove from the supports, when the jibs are replaced and the machine is ready for operation. The arbor carries eleven saws, 12 gauge, 32 inches in diameter. The guide bar is constructed of a

solid bar 1x3-inch, V-grooved, and slotted to receive the bolt which holds the guide arm in place. The slot in the bar is protected below by a strap of iron, so that when the nut is taken off the guide bolt, it cannot drop out.

The guides for holding the guide block or pin are made of spring steel, split up to the guide bar, and on each side is a dovetailed recess which holds the guide block in place. Adjusted to each guide arm on top is a bolt and nut whereby the guide can be spread and adjusted to each saw. There is placed on top of the guide bar an iron pipe in which is inserted small pipes closed at the end; one of these pipes is placed between each saw, and is perforated to allow water to be applied to the saws, if necessary. The guides are placed on top of the cant to be sawn, and are self adjustable; as, for instance, when sawing an 8-inch cant followed by a 6-inch cant, the guide drops two inches, and will rise if a 6-inch is followed by an 8-inch.

The inventors of this machine claim that it can be run with a great deal less power than a machine which cuts against the grain of the wood. It is run or driven by a 14-inch belt, and by actual test has sawn 72 small logs, six and eight-inch cants, in 25 minutes. The machine requires no special foundation, but can be set up on the ordinary mill floor.

Orders Obtained in New Zealand.

Mr. J. S. Larke, Canadian Trade Commissioner for Australasia, in a recent report says that some newspapers in Canada have published statements that Australia is going to ship its butter in a box recently invented made up of clay and straw. The information appears to have been obtained from an Irish newspaper. The report has for its foundation, that some time ago two very small samples of this material were brought to Sydney. The proposed box is a wooden box lined with the alleged material. No one here appears to have thought that it could be a substitute for the present wooden box either on the plea of economy or of quality.

There is no doubt that the butter manufacturers are concerned as to the material for their boxes. Prices are 80 per cent. higher than they were 12 years ago; a box which could be had for 10d. is now 1s. 6d. Some sample boxes have been ordered from Norway, made of what is termed here, white pine. The material has the texture of Canadian spruce, but is somewhat darker in color, and in all probability contains more resin. Boards cannot be cut wide enough to make the side of a box and hence the material has to be tongued and grooved. This is a very strong objection. The price is, as yet, uncertain, but so far as known will be somewhat higher than the butter boxes made from New Zealand white pine.

If it were not for the advantageous duty of 6d. per 100 superficial feet given to New Zealand on the pine, it is probable that spruce could be imported from Canada, but Canadian boards would be required to pay 2s., if undressed, and 2s. 6d. if dressed, per 100 feet above the rate of the New Zealand pine if of inch or less than inch board stuff. New Zealand pine can be purchased at slightly under 11s. 6d. per 100 feet, duty paid, at the present moment. Shooks bear a duty of 25 per cent.

There are advices of 56 cargoes of timber from the west coast of America and the Baltic ports on the way to Australia, but not one of these is from British Columbia. The prices were so low at the Sound ports for Oregon that Canadian timber for nearly a year has been practically out of the market. The advance in the prices in the United States market has enabled British Columbia mills to again enter this trade, and orders for several million feet have just gone forward.

Forestry Convention in Toronto.

A special convention of the Canadian Forestry Association is to be held in Toronto on Feb. 11th and 12th. The sessions will be held in the Convocation Hall of the University of Toronto. As in previous years, the railways are granting a single-fare rate for the meeting. As forestry has of late years come so prominently into public attention, a large attendance is expected. The membership of the association is now nearly 1,700. The association is nine years old, having been founded in 1900 by Mr. E. Stewart, then Superintendent of Forestry for the Dominion. Its membership includes many prominent lumbermen and officials of the Federal and Provincial Governments. The work of the association has been largely educational in character. Its objects include the advocacy of more rational and scientific methods of dealing with the forests, the exploration of public land (with a view to ascertaining the areas not suitable for agriculture and the setting apart of these for permanent forest land), and the dissemination of knowledge.

The president for 1908-09 is Mr. W. B. Snowball, of Chatham, N.B., and the secretary, Mr. A. H. D. Ross, of the Faculty of Forestry, University of Toronto.

The Dominion Government Trade and Commerce reports contain the following trade enquiries. Readers of the "Canada Lumberman" may obtain the names of enquirers by writing us, enclosing stamped envelope and stating number of enquiry:

9. Turned wood.—A Manchester firm wishes to correspond with Canadian manufacturers of all kinds of turned wood.

11. Whitewood.—A Carlisle firm wishes to correspond with Canadian shippers of planed whitewood.

Short Lengths from British Columbia

American lumbermen operating in British Columbia are combining in a campaign for the repeal of the United States tariff on lumber. Among those interested are Arthur Rogers, president of the Rogers Lumber Company, operating retail yards in North and South Dakota, and having two or three mills in British Columbia; S. H. Bowman, of the Bowman Lumber Company, and also head of the Union Lumber Company; Otto Lachmund, manager of the Lamb-Watson Lumber Company, and M. J. Scanlon, of the recently incorporated Brooks-Scanlon-O'Brien Company. If a further market is found for British Columbia lumber, more cutting is likely to follow, and this would be a reason for the government to consider the extension of the license limit of 21 years. This request has repeatedly been made by timbermen, who claim it will be a preventive against slashing.

There is an agitation in New Zealand ports against the importation of sawn British Columbian and American lumber. The people responsible for this are urging the importation of the logs roughly squared to make safe stowing, so that they can be cut up in the New Zealand mills and thus provide more work for the people of the southern Dominion saw-mills. According to shipping men acquainted with the situation, in order to do this new mills would have to be constructed on modern lines, for at present there is not a mill in New Zealand which could handle the huge logs which are grown on the West Coast. They have no machinery for the handling of the big timber, and so until their mills are brought up to date the exportation of sawn lumber from the west coast will continue.

Mr. Fred Fraser, a prominent timber limit owner of Revelstoke, B.C., reports that leading up-country lumbermen are urging upon the Hon. Thos. Taylor, Minister of Public Works for British Columbia, the necessity for changes in the timber regulations with a view to securing greater security of title in connection with timber leases. The mill owners feel that the Provincial Government should go a step farther than to guarantee licenses for a period of more than 21 years. They realize that the present Government does not contemplate any policy of confiscation after the expiration of the 21 years period, but realize that future administrations might adopt a vastly different policy. During a visit to England last year for the purpose of selling timber limits, Mr. Fraser found that he was handicapped by the existing regulations. All the financiers he met entered objections, claiming that British capital would not be invested until the Government amended the timber laws. In one or two instances people who had bought limits were anxious to sell, and actually gave him options on several large tracts.

A petition signed by several hundred hand loggers has been forwarded to the British Columbian Government, requesting that the hand logging privilege, which had been cancelled in a majority of timber areas of the province, be restored. The hand loggers are very much in earnest over this matter and a deputation of the leading men in that industry will wait upon the Government in the near future to press their claims for a restoration of the cancelled privileges. The petition sets forth the fact that there are approximately 1,500 hand loggers idle in the province under the present condition of the industry. The majority of these hand loggers have capital invested in outfits which run all the way from \$500 to \$3,000. They claim that there are large districts throughout the province which can only be logged successfully by hand loggers on account of the inaccessibility of the timber, which cannot be reached by logging engines, so that they claim the timber will never be removed unless cut by hand loggers.

Although Canada subsidizes a line of steamers to Mexico, there is no parcel post service between the two countries. Canadian fourth class matter addressed to Mexico must go via England, leaving here about every ten days and taking a month to reach destination. To secure direct delivery it is necessary to forward to some United States postmaster, enclosing U.S. stamps sufficient to carry it from there on. This virtually amounts to double postage. A movement is on foot to ask the Government to establish a direct service.

C. E. Sontum, Canadian trade agent, quotes an interview in the Sundsvalls "Tidings," in which it is stated that the falling off in the Swedish sawmill industry will be much greater than has generally been expected. The export of wood products in 1909 will probably mean a reduction of Swedish export values by about 25,000,000 kroner or a reduction of about 25 per cent. Under present conditions this industry does not pay; log prices in Sweden are, according to this authority, by far too high in comparison with the prices for wooden goods abroad.

Messrs. Smith, Tyrer & Company, lumber and commission agents, Halifax, N.S., have recently moved into new offices on Pickford & Black's wharf.

Modern Machines Demand Skilled Operators.

Only yesterday the mill man had to be satisfied if his machine turned out work at a feed of 40 to 50 feet per minute; he thought he was doing something extraordinary if this was exceeded. To-day he is neglecting opportunities if he doesn't produce absolutely smooth work at a rate of feed of over 100 feet per minute. How much he can exceed this with the best modern machine depends solely upon the operator and the use he makes of the accessories with which they are provided.

In a word, the man must be brought up to the standard of the machine. If the machine itself is perfectly capable of running at a feed of over 150 feet per minute, the operator is responsible if this rate is not maintained.

We need more brains at the machine; it's only a matter of ability and of price. Fifty cents or a dollar per day is a small amount in wages compared with the value of the increased output which may be obtained by more intelligent operation. Such operation also means improved quality of product, decreased expense for repairs and less time lost while the machine is out of commission. It is a matter which every mill man should seriously consider.

A Practical Woodworkers' Tool.

There is a general current of unrest among woodworkers who are keenly watchful for new and practical methods to take them away from the beaten paths of their forefathers. The demand for better machines—better tools or appliances is greater to-day than it has ever been. The illustration published herewith is of the Shimer Blade's Cylinder, a practical tool for surfacing, beading and siding, lately put on the market by Samuel J. Shimer & Sons, Milton, Pennsylvania.

This new cylinder provides for the use of thin blades of high speed steel, which when properly tempered and treated serve for one or two days of work on hard maple, oak or hickory. Knives made of this material in the old, heavy slotted fashion would be too costly to use owing to the first cost of the steel and the trouble in working it, yet the expense for the thin blades does not exceed that of the ordinary machine knife.

By reference to the illustration it will be noticed that the thin blades

The Shimer Blade's Cylinder for Surfacing, etc.

of this head are reinforced by special knife holders, which fit snugly in grooves made in the cylinder, enabling the blades to withstand the strains to which they are subject during operation. These knife holders are made of tool steel and form part of the chip-break, which when worn or injured may be replaced without discarding the cutter head or causing delay and inconvenience.

These blade's cylinders have superior advantages in point of simplicity, durability and efficiency. The blades may be kept in good working shape with less grinding, less trouble in setting and fastening to the head. They are also less liable to get out of balance, owing to the lighter weight of the knives used.

The ease by which the chip-breakers can be renewed, and the absolute security of the thin blades when reinforced with the holding clamps, together with the many other advantages which will be apparent to the wide-awake woodworker, makes it seem certain that this will be a favorite tool wherever good work is desired.

Further information can be secured from the makers, who will gladly mail their latest book of cylinders to any one making the request. Address Samuel J. Shimer & Sons, Milton, Pennsylvania.

When a splinter has been driven deep into the hand, it can be extracted without pain by steam. Nearly fill a wide-mouthed bottle with hot water, place the injured part over the mouth of the bottle, and press tightly. The suction will draw the flesh down, and in a minute or two the steam will extricate the splinter and the inflammation will disappear.

The Tri-State Retail Lumber Dealers' Association opened its second annual convention at Evansville, Ind., on Jan. 20th. The convention was an unusually successful one, and the members were warmly welcomed by the mayor of the city. Many important matters of business were attended to and an enjoyable banquet was held.

The Keewatin Lumber Company, of Keewatin, Ont., are making their first shipment of lumber to the eastern markets of the United States, comprising 1,000,000 feet of white pine, which is going by rail to Fort William and by water to North Tonawanda, N.Y. Smaller lots have been shipped by the same company during the season to the Minneapolis and Chicago markets.

Uses for Quarter Cut Slabs.

In connection with quarter sawing a log into lumber there is slabbled off usually about eight V-shaped corners, says an exchange. That is, if the log is split into quarters, when the quarters are turned down on the carriage for sawing into boards or flitches in slabbing to get a face of four or five inches, whichever the sawyer slabs for, there is cut off a little corner slab two sides of which are sawed in V-shape with bark on the back. These pieces run in varying sizes from three to five inches on the two sides of the V.

One millman in speaking of this matter says that usually these pieces were thrown into the slab fire at his mill, but he concluded it was too good stuff to throw away, so he had been having the corners saved. He said it has been a little difficult to discover a market which could utilize to advantage these corner pieces or a product that could be made from them. They probably could be worked best by cutting up into short lengths and some of them might make small table legs or they might be cut up into small dimensions for furniture stock of some kind. It appears that there has not been enough continued effort at developing a market specifically to utilize these pieces and, as this millman says, they are too good stuff to go to waste. The average furniture factory has need of a wide variety of pieces of oak of small dimensions, and in this there is an opportunity to have oak with quartered face or in squares.

It would seem preferable to work it into smaller dimensions for the quartered face, as squares can be made from plain slabs. Some of it may be spoiled by sap, but in some oak the sap is very thin. However, here is where some good oak in small dimensions is going to waste and what is wanted is a market that will utilize it to advantage. There ought to be a market through which oak could be supplied to the mutual advantage of those needing small dimensions and those who have these quarters going to waste at their mills.

Here is an old-time recipe for finishing mahogany. Probably some of you have tried it, but to others it may be worthy of attention. Take one-third linseed oil, two-thirds turpentine; coat woodwork and wipe off clean. When thoroughly dry, coat with bichromate of potash; then fill with a

dark, rich filler, then shellac and give three coats of varnish and rub with pumice stone and water; give woodwork one heavy coat of polishing varnish after being rubbed in water; then rub again in water, and polish. In finishing mahogany some use the bichromate of potash without oiling, but they do not get as good a color. All mahogany should be oiled first, unless you want a very light color; then it should have a thin coat of shellac first.

Plenty of Steam from Frozen Logs.

It scarcely seems possible to generate sufficient steam in a sawmill boiler with sawdust from frozen logs, right out of the water, with ice hanging all over them, yet that is precisely what the Gordon Hollow Blast Grate Company claim that many users of their grates are doing. This grate stimulates combustion to a wonderful extent, adding to the efficiency of a boiler, and making it easy to keep steam with fuel in such a condition that it is out of the question to burn it on an ordinary grate.

It saves labor in firing, is equally efficient in ordinary furnaces or Dutch ovens, and is adapted for any number of boilers, from one up. No change in construction is necessary. A hole must be made in each wall through which the pipe is to pass; beyond this not a brick need be disturbed. The largest outfit can be installed between quitting time Saturday and starting up time Monday morning. There is no difficulty about maintaining a fire at night, when the blower is idle, and no objection to so doing.

The manufacturers will ship the grate on approval, subject to thirty days' exhaustive test, they paying the freight both out and back if the outfit is rejected.

The annual meeting of the Ballantyne Lumber Company, Limited, was held on January 15th at its head office, 123 Bay street, Toronto. The following officers and directors were re-elected: President, Edward Clark; vice-president, W. S. Kelly; manager, W. J. Foster; secretary-treasurer, A. E. Clark. The board of directors, in addition to the officers, is composed of W. J. Kelly, T. N. D. Kelly and R. L. Clark. The members then discussed the best method for operating their holdings and took up in complete detail the improvements they proposed to inaugurate at an early date.

THE MACHINERY WORLD

What Manufacturers of Logging, Sawmill and Woodworking Equipment are Doing

Thinner Gang Saws and Faster Work.

To use thinner saws, thereby producing more lumber from the log, and to saw faster, thereby increasing capacity and reducing cost, are results striven after by progressive sawmill men; and every wide-awake machinery manufacturer does his utmost to make these results attainable.

In the design of gang sawing machinery, the effort has been to effect such a movement of the saw blades as to equalize the work and strain so that the work should be equally distributed to all the teeth and to clear them effectually from sawdust on the return stroke. This seems easy, but is not. It has puzzled the best designers in the business, for years. The best that could ever be done was to approximate the desideratum, at the average rate of feed to be carried, and be satisfied with indifferent results when this average feed was departed from.

Wickes Brothers, of Saginaw, Mich., specialists in gang saws and among the leading builders for nearly half a century, now announce the perfection of a new line of gang sawing machines embodying an entirely new principle, by means of which thinner saws may be used and faster cutting done, than heretofore possible. The work on the saw teeth is so evenly distributed that they all cut exactly the same advance into the cant and continue to cut the same length or chip throughout their path through the timber. At the end of the cutting stroke, the saws swing sharply back, away from the cant and drop their dust, and returning upward meet the cant at the top of the return stroke and commence sawing immediately and without loss of stroke.

Furthermore, by means of ingenious but simple mechanism, the advance of the saws is automatically regulated in unison with the feed so that the sawing is always done at full stroke and full efficiency, regardless of the rate of feed.

The new gangs are heavy, simple machines with large pins and bearings and, though new in design, embody the results of the wide experience of the makers. The new model Wickes gangs have already made some astonishing records of output, and with very thin saws at that. They are built in seven different styles and an endless variety of sizes to suit all conditions.

Machinery Trade Notes

The Alert Bay Lumber Company, of Alert Bay, Vancouver Island, have purchased a 66-inch, style "K" Saginaw band resaw, latest 1909 type, from W. B. Merschon Company, of Saginaw, Michigan.

The Canadian Pacific Lumber Company, of Port Moody, B.C., have purchased a 66-inch, style "K" Saginaw band resaw, latest 1909 type, from the W. B. Merschon Company, of Saginaw, Michigan. The sale was effected by Mr. R. H. Mader, the manager of the Seattle branch of the Merschon Company, Saginaw, Michigan.

A Wicks Brothers' gang saw, model No. 15, 32 inches wide, recently installed at the Fidalgo Mill Company's plant, Anacortes, Washington, established a new record when it made 300 strokes per minute, carrying a half-inch feed per stroke, the stroke being eight inches deep and No. 18 gauge saws being used.

We are in receipt of a handsome little booklet from the Dodge Manufacturing Company, of Toronto, entitled "Quality in Transmission Machinery." While containing only eight pages, the booklet is very complete, showing the various designs of pulleys and hangers for shafting and friction clutch pulleys manufactured by this company.

The Jeffrey Manufacturing Company, of Columbus, O., have issued a catalogue, No. 67D, referring to the Jeffrey rubber belt conveying machinery. It contains a number of splendid illustrations showing the numerous uses to which these belt conveyors can be put. Among the illustrations are pictures of the Jeffrey "Century" Rubber Belt Conveyors. These Conveyors, they state, are made of the very best duck underlaid with a special high grade rubber of a composition to withstand the abrasion of the material handled.

The Hespeler Machinery Company, Limited, Hespeler, Ont., have purchased the plant, machinery, patterns, raw material, finished and partly finished stock of the Clark-Demill Company, Limited, and will continue the manufacture of all standard lines of woodworking machinery, together with some new specialties. The officers of the new company are: President, G. D. Forbes; Vice-president, W. A. Kribbs; Sec.-treas. and managing director, W. G. Chater. Mr. Chater was formerly with the Goldie & McCulloch Company, but for the past eleven years has been with the Jenckes Machine Company.

Henry Disston & Sons, the big saw manufacturers, have prospered in Canada. About three years ago they started business in small premises at 112 Adelaide street east, Toronto. A little later a modern factory was erected and the firm felt that they were established in quarters which would fill the requirements of their Canadian business for many years to come. However, under the energetic management of Mr. W. E. Radcliff, they have developed trade to such an extent that a fine site has been purchased on Fraser avenue, Toronto, and in a few weeks the erection of two factory buildings will be commenced. The site comprises several acres, so there will be abundant room for extensions. The location is one of the most desirable in Toronto, being close to the tracks of the leading railways, where the shipping facilities will be of the best.

Good Lasting Qualities of Cypress.

For years visitors to New Orleans from northern points have been curious regarding the above-ground cisterns in the shape of cypress tanks with which the city is supplied from one end to the other. The purity of the water from these tanks has also been a source of surprise, in view of the fact that many such tanks in use to-day are fifty years or more old. Each household is supplied with one or more tanks (or cisterns) and the residents are very strenuous in their opposition to the order, which will become effective soon, to remove the tanks and depend entirely upon the new waterworks system now being installed.

In olden times, considerably more than one hundred years ago, there were many wealthy French and Spanish families residing in New Orleans who decided upon a waterworks system of their own, to supply running water for general use and for fountains in their courtyards, and it was during the French sovereignty of Louisiana that the system was built.

Cypress Water Main over a Hundred Years Old.

The mains were of cypress logs eighteen feet long, and averaging twenty-two inches in diameter, through which, end to end, were bored five-inch holes. The sections of pipe were joined end to end by iron connections driven into the end of each log. Wooden plugs made of cypress were used at the ends of the various mains and to cut off the supply from a delinquent consumer. The system started at the foot of Canal street, extended to Chartres, and for several blocks out of Chartres, with branches running each way. A large wooden tank was constructed at the foot of Canal street, wooden pumps were installed, and slaves were constantly employed pumping water into the tank by hand. The water mains were connected with this tank and the gravity system of distribution employed.

It is not known just when this system was installed, but it is known that Benjamin Latrobe was granted certain privileges and took over the system in 1811. Presumably the system had been installed quite a number of years before, but it is impossible to state how many. Latrobe evidently had his troubles and failed in the extension of his waterworks system, as the plant passed into the hands of the Commercial Bank in 1833. The bank operated the plant for a great many years thereafter, and it was only superseded by the more modern system installed some years ago.

The cut shown herewith is a section of the old main, and there is also a connecting pipe and a plug. The cypress is in as sound condition as when it was installed, although the metal connection is badly corroded. This section of pipe was dug up in Chartres streets a few years ago, having been underground for more than one hundred years. The owner of this old relic insisted upon the decorations before he would allow the photograph to be taken.

When an injector "kicks off" and refuses to work well do not try jarring it with a hammer, but look for sediment or scale in some of the valves. The feed pipe to the boiler will sometimes accumulate enough scale to seriously interfere with the working of an injector, and for this reason should be arranged so it can be examined.

CAMP DEPARTMENT

Lumber Gangs Staying in the Camps.

The gangs of workmen in the lumber camps of the Upper Ottawa this season have not changed in mid-winter to the extent that is usual. Frequently the log maker or teamster has a new bunk mate after the Christmas holidays. But this season the chums are sticking together. The reason is akin to that which makes the lumber king stick to his stocks of sawn pine and spruce. There are no tempting offers of money in either case.

So the crowds of jolly shanty men back in the cities to spend their earnings before their "time" expired were smaller this winter. Few of them "jumped" their jobs, the employers said. The hiring agents knew it, too, for they received no fresh orders to replace men early in January as is the custom. True enough, some shanty men left the woods after a couple of months toil and returned to more refined society. They were soon sorry. Just as soon as their wad of wages was gone. The agent who sent them up in November shook his head when the deserter turned up for re-engagement. None of the companies wanted any men. Letters pass to and fro between even the remotest shanties and friends at home, and it was not long till the news was well disseminated among the crews who had stayed with their jobs that there was no wild demand for men in Ottawa or other hiring points. This intelligence was received in the region of the tall timbers soon enough to check the annual exodus from the shanties cityward.

The lumbermen are deriving a benefit from not having their gangs broken up. The amounts saved in transportation of new shanty hands is a considerable item alone. Then the experienced workers make better progress when they are left with their companions the season through instead of being thrown in with raw and uncongenial fellows in the middle of winter. The steady men are better off under the peculiar conditions of this season and financially all will be ahead when the time for paying off in the spring arrives. The long unbroken months to their credit will net them a better sum than would the higher wages if they abandoned work for a spell and squandered the first two months' earnings.

Logging Methods in Southern Camps.

Logging methods in use in the Southern States vary materially from those in Canada. A correspondent of the "American Lumberman" gives the following account of conditions in the south Atlantic territory:

In some sections where the timber is scattered and the land is level and dry, logging is a very simple operation. The trees for a distance of a mile on each side of the track are sawed down, usually by hand, and hauled into the log cars by either mules or oxen. A great deal of the logging in western Florida and southern Georgia is done in this manner, although the up-to-date logger finds it more economical to use steam skidders, even under these conditions.

The interesting part of logging, however, is in securing timber which 30 years ago was considered absolutely inaccessible, and the land consequently worthless, and here is where modern machinery appears to great advantage. I will endeavor to depict the almost impossible task of conquering these conditions, and compelling nature to give up this valuable timber, from personal observations in the Everglades of Florida.

To begin with, a great deal of this land has no bottom, and men and animals frequently sink into the earth to appear no more. The first thing necessary is to get a piledriver at work and build a solid foundation for the main track and in this case it is often necessary to drive one pile on top of another to reach bottom.

After getting started the ties are laid for a short distance, rails securely fastened, the engine is placed on rails, and everything is ready to work slowly through land that never before has been entered by human beings since the beginning of the world.

Crews with axes proceed with the engine, cutting down timber, driving piles and extending the track as they go on their slow journey. When they get far enough they put on another crew to start getting out the timber, and all the while the pile driving and laying of track go on and on.

A steam skidder and loader is then placed on the rails (there are too many styles and makes to describe right here), some with two drums, some with three or four, and on up to 25, according to the thickness of the timber. Some are overhead trolley affairs, and some have lines extending down to the ground from swinging booms, but the former style are used almost altogether in thickly timbered swamps.

In the case of the overhead machine a pulling line with a hook on the end recedes on a trolley wire to a point at which men are waiting with a log; the hook is lowered, the man slings the rope around one end of the log, the engine is started, the end of the log is raised almost up to the trolley wire, and then is hauled in and dropped in a pile alongside the railroad track.

In the case of the boom skidders, wherever possible, a mule is used to carry out the line to the log, a sling is made and fastened around the

log, the engine is started, and that log proceeds to do some funny stunts, tearing through the woods, pulling down saplings and small trees, winding around stumps, zigzagging here and there at the rate of 250 feet a minute, until it is brought up alongside the track.

Usually twice a day—noon and night—log trains are run out with a steam loader fitted with wire rope, the logs are hoisted on cars and taken to a pond alongside the tracks and back of the mill, where they are dropped off into the water. They are then in the hands of the log riders, who each mount one of the logs, with a long pikepole with a sharpened spear in the end, and jumping from one log to another the riders pole them up to the hopper of the mill, where a conveyor that is constantly moving carries them up and drops them on a slanting platform. A lever in the hands of the sawyer is then moved, one of the logs slides down on to the saw carriage; by the movement of another lever it is clamped down to the carriage, carried on to the saw, run through and cut up into any size desired. The outside or refuse is separated as it leaves the saw, and run on rollers worked automatically along a sort of trough about 300 feet outside the mill to a brick wall, and deposited on the farther side of the wall in a fire, which is kept going all the time.

Some sawmill men utilize a great deal of the refuse, cutting it up into bundles of building lath, fifty to a bundle, for which they get 10 cents a bundle from the dealer, and one lath cutter can turn out 300 bundles a day, at a daily cost of \$10, making a profit of \$20 net.

It may be that some who read this account have overlooked this feature and may find it profitable to do so. In the case of cypress logs, many cut off the butt, which is hollow in the centre, and throw it away, while other long-headed men find that it pays to cut them up into shingles.

Reverting to the subject of wire rope, it might be stated that the size and quality generally used, of course, depend on the size and weight of the timber, but as a rule $\frac{5}{8}$ -inch diameter is used on pine and $\frac{3}{4}$ -inch on cypress, which always grows in swamps and is loaded with water.

Where the timber is situated on the banks of a body of water, instead of skidders what are known as pull-boats are used, which are very similar to the former except they are used in the water, and are guyed and anchored along the banks. They are fitted with steam engine and drums with wire pulling rope, usually $\frac{7}{8}$ or 1-inch in diameter, and frequently are run out for a mile, or even two.

Many operators use large cones on the end of the line, which fit over the end of the log and guide and keep it from getting "hung up," to use the logger's expression, in coming through the woods. The rope, or ropes, used on a pullboat usually are endless; this is, a heavy rope which does the pulling is fastened to a lighter rope that is used to pull the heavy rope back from the machine to the log; at the extreme end of the line in the woods a large block is fastened to a tree and the line is pulled back and forth through this block.

The lines usually last a great deal longer on a pullboat than a skidder, as they are heavier, do not drag on the ground as much, and have a straighter pull.

Assisting the "Logger-in-Town."

The "logger-in-town" has always been a person of much interest, and lately the philanthropic people of Vancouver, B.C., have been doing a great deal for him. The conviviality of the lumberjack is proverbial. After his hard season in the woods he is altogether prone to make for the Water street saloons where there is lots of life, companionship and drink. Very often his entire wages, saved during his strenuous sojourn among the tall timber is dissipated in a few days, and he gets into debt to the bar. Cursing his foolishness he travels up the coast again on borrowed money to labor in the hardest kind of way to get more money to "blow in." This has been known to be the case for a generation past, but not until recently have philanthropic persons undertaken to give the hard-working lumber-jack a home to go to when in town.

The work of the Vancouver Sailors and Loggers' Society, Limited, as the enterprise is known, is receiving a large measure of support even at this early stage in its life. The institute provides amusements for the mind and body. The reading room is kept well supplied with literature and a billiard table has been installed. The lunch counter and bedrooms are clean and wholesome. To give an idea of the methods pursued the following programme provided for one week is reproduced: Monday, 8 p.m., limelight lecture by Rev. I. Waters, subject, "Travel in Zululand"; Tuesday and Friday nights at 8 p.m., lectures by Captain C. Ed- die, subject, "Seamanship and Navigation"; Thursday, 8 p.m., Bible class; Saturday, 8 p.m., social and musical evening, provided by the young people of the various denominations; Sunday, 4 p.m., men's social hour, carried on by the members of the Ladies' Guild; 7.30 p.m., short Gospel service.

R. H. SMITH CO., Limited

— St. Catharines, Ont. —

We are the Sole Manufacturers of Saws under the **Simond's Process** in the Dominion of Canada

There is no process its equal for tempering circular saws. Other makers recognize this fact, as some of them, in order to sell their goods, claim to have the same process. All such Claims are FALSE, as the patentee in the U. S. and ourselves are the only firms in the world who use it.

INSERTED TOOTH SAWS

Notice the improved shank. We call particular attention to the swell which strengthens it at the weakest part and which gives it more wear than the old style.

Shanks made in usual gauges and to fit your saws perfectly.

SHINGLE SAWS

The quality of the "Simonds" Shingle Saws is proven by the fact that the largest shingle and machine manufacturers in Canada are using them.

Run a "Simonds" and you will increase your output.

CROSS-CUT SAWS

THE "NARROW LEADER"

REFINED SILVER STEEL.

The Simonds Temper and style of tooth make the "Leader" the fastest and easiest cutting saw manufactured.

Write for prices.

R. H. SMITH CO. Limited St. Catharines, Ont.

WANTED & FOR SALE DEPARTMENT

PUBLISHERS' NOTICE

Advertisements other than "Employment Wanted" will be inserted in this department at the rate of 15 cents per line each insertion, on the basis of 14 lines to an inch, payable in advance. When four or more consecutive insertions are ordered a discount of 25 per cent. will be allowed.

Advertisements of "Employment Wanted" will be inserted at the rate of one cent a word, net. Cash must accompany order.

Advertisements must be received not later than the 10th and 26th of each month to insure insertion in the subsequent issue

Plant consists of saw and planing mills, dry kilns, box and sash and door factories, etc., large vessels can load direct from yard. For price and terms address —F. E. LEUSNER, 75 Yonge St., Toronto, Ontario.

Trade Department Report on Wood.

"Millions of wood blocks are used annually in Great Britain for the paving of streets. These blocks are of various sizes and are made from a hardwood that at the same time is susceptible to creosote. Tenders for large quantities are periodically invited by the municipalities, and if Canadian firms are anxious to take up this line of business they should write to the city surveyors requesting that their names be placed on the list of firms invited to tender. Arrangements for creosoting can be made at several ports if desired.

"The following are the names of the surveyors or engineers in some of the larger municipalities. A complete list can be obtained from this office if required: Henry E. Stilgoe, city surveyor, Birmingham; James Lord, city surveyor, Hali-

fax; E. G. Mawbey, city surveyor, Leicester; T. de Courcy Meade, city surveyor, Manchester; C. R. S. Kirkpatrick, city surveyor, Newcastle-on-Tyne; A. Brown, city surveyor, Nottingham; E. C. Foote, city surveyor, Oldham; W. T. Lancashire, city surveyor, Leeds; J. A. Brodie, city surveyor, Liverpool; A. Evans, city surveyor, Salford; C. F. Wike, city surveyor, Sheffield; J. A. Crowther, city surveyor, Southampton; J. M. Moncur, city surveyor, Sunderland.

"Canada's trade with Great Britain in railway sleepers has not increased to any extent during the last ten years. On the other hand, since 1902, a decrease is apparent. Tenders are periodically invited, and if Canadian firms are anxious to secure a portion of the trade it would be advisable for them to write to the managers of the large railway companies for permission to tender. Their names and addresses can be obtained from this office on application.

"Figures have already been quoted indicating the trade done by Canada in staves. Many of the larger breweries manufacture their own barrels. Canadian firms anxious to transact their business without the assistance of an intermediary should communicate with the breweries direct. It would also be advisable to write direct to the cooperages in this district who use staves and other timber in the manufacture of barrels, boxes and tubs. Names and addresses can be obtained by writing this office.

"During the last five years this office has continually drawn the attention of Canadian manufacturers of wooden goods to the almost inexhaustible demand for handles in this district. A few firms have intimated that they wish to supply these goods, and the names of buyers have been forwarded to them; but investigation as to results has revealed great disappointment.

"The representative of a first-class Birmingham firm toured Canada last year and interviewed almost every handle manufacturer in Canada. He concluded arrangements whereby large trial orders were to be filled by a firm in Nova Scotia, but the firm went into liquidation in spite of their intimation that unlimited capital was at their service. Two Ontario firms visited Birmingham a few months ago, studied the requirements of the market, and assured me that their arrangements on this side were quite satisfactory. They have returned to their factories equipped with the necessary knowledge and anticipate a continuous and increasing trade with this district. This is the right course to pursue.

"There are no board of trade returns specifying the amount of business done in wooden handles, but Birmingham and Sheffield alone must consume enormous quantities. The United States are large exporters of all kinds of wooden handles to Great Britain."

Review of Current Trade Conditions

Ontario.

Business is somewhat flat as yet, the improvement which was expected with the new year not having materialized to any great extent. The quantity of business being done is not so large as was expected by far. There is, however, a firmer feeling generally. In hardwoods trade is also flat just now, though in some quarters it is said to be strengthening a little on account of a better demand from the United States. It is expected that a general improvement will occur within the next two months. Basswood is a little firmer and so is oak, the latter being scarce. There has been a fair demand in the Ottawa district for certain lines during the present month, such as square southern pine and certain sizes of hemlock. Dressing pine is quoted at \$32 to \$35 a thousand; common stock boards, as No. 1 and grade, \$24 to \$28; cull stock, \$20; sidings, \$17.50. Hemlock continues to sell freely and in car lots brings \$16.50 to \$17. Spruce flooring is quoted at \$22 in car lots. The season being practically over for shingles, there is but little movement in them, and prices are weak though unchanged at \$3.20 for British Columbia. White pine lath are scarcer, No. 1 especially. It brings \$4 for No. 1 and \$3.50 for No. 2 firm. A good deal of varied stuff is moving, not so much good pine as cheaper goods, such as hemlock and spruce.

Eastern Canada.

The New York demand for spruce has declined somewhat during the past month, but the prices are steady. It is feared, however, that there may be a reaction in February. There is a good demand for spruce frames, which are selling at prices to bring about \$24 in Boston, for nine-inch frames and under. Prices, however, are unsteady and there is no tendency on the part of buyers to anticipate their wants. Random is bringing lower prices. Shingles are in poor demand and have fallen off about ten cents during the past fortnight. Cedar extras will bring about \$3.80 to \$4 in Boston, but there is not much doing at the latter prices. There is only a small demand for lath. The splendid conditions for getting out logs which have existed so far during the winter have tempted operators to take advantage of them to the utmost extent. The probability is that every contract will be fully carried out. There is about eighteen inches of snow in the woods in many places and yarding conditions are also excellent. Large logs are in more than usually good demand, especially for spruce, and this is resulting in the contractors picking their logs more carefully than ever. Portable mills are doing rather poorly, many of them being tied up, as a result of the low prices which have prevailed. Trade conditions generally are dull with no indication of improvement for some weeks to come. The St. John district reports only three mills running. Winter liner shipments have increased to a slight extent. It has been said that shingles are showing a tendency to weaken, but the St. John trade shows no indication of it as yet. The St. John shingles have been pretty well shipped, and it is not expected that a full cargo could be made up before April. Probably the prices at present would be about \$3 for dutiable "extras" and \$2.50 for dutiable "clears." English deals promise to be in much better demand during the coming season than they have been for a couple of years back.

Western Canada.

Vancouver reports a fair demand for logs, with prices for a good average quality of fir running \$9 or \$9.50. Few independent camps are operating, the mill companies mostly providing their own supply. It is thought that when the demand is heavy and the price is high there will be so many going that the market will be glutted.

The past year was a pretty bad one for the mills in the interior, the returns showing that only about 25 per cent. of the aggregate capacity of the mills was produced. Even with this, the stocks on hand are large enough to provide for any reasonable demand. Out of 66 mills in the Mountain Lumber Manufacturers' Association, only five or six are now operating.

Great Britain.

The renewal of the public sales in London has given an appearance of business, and the demand is a little more lively though not so good as at this time last year. Liverpool reports that there is no change in the general character of the market at present. Stocks on hand in the northern ports are still too heavy and are being reduced only in small quantities. On account of the firm position taken by the Ottawa producers the holders of pine stocks in Liverpool are sitting down upon their stocks and not making sales unless they get what they wish in the way of price. There is no change in the spruce deal market, the demand being still dull. Some dealers report a better tone in spruce but are unable to give particulars. No shipments from St. John or Halifax are reported to be under way, and as stocks are not excessive holders ought soon to find themselves in a good position. The stock of sawn and pitch pine timber at Liverpool and Manchester is still far too heavy and is largely of inferior character. This is causing a drag upon the market for future transactions. Glasgow reports show that business has again started after the holiday season, but that it is difficult to estimate what the demand will be during the winter and spring months. There has been quite a movement of American hardwood from the docks. Inquiries for spruce deals continue to be numerous, but so far there have been no imports this year. It is now believed that the consignments by winter liners will not be very plentiful. Quotations on a c.i.f. basis are particularly firm and higher prices are expected shortly, but buyers are not much impressed with this idea.

United States.

The general improvement in trade conditions which was confidently expected during the month of January did not materialize to so great an extent as was hoped, yet in spite of this, the volume of trade is much larger than it was at this time in 1908, prices are now stronger and the country yards are coming forward with their orders. These, together with the regular manufacturing demands, are helping to bring about a gradual improvement. Yellow and Norway pine and hemlock for building stock are in fairly good demand in most places and prices have advanced on these lines. Northern pine at Chicago has experienced an improvement in demand and for the better grades there is a fairly active business. Wide boards are scarce. It is expected that by the opening of the spring there will be a shortage of shop lumber and the current opinion is that its price will advance and also the prices of pattern lumber and low grade wide boards. At Buffalo, white pine is about steady and the demand light. In Chicago there is a freer movement of fir in the better grades. Lower grades, however, are in poor demand because of the competition of yellow pine. Shingles in Chicago are not maintaining the 25c. advance very well. Prices for all grades of red cedars are varying a great deal. White cedars remain unchanged. Minneapolis reports that the advance in prices has put a temporary stop upon business. In Buffalo another advance of ten cents a thousand has been made on red cedars from the Pacific coast, but the demand continues good. An effort is being made to sell Vancouver red cedars in Buffalo to compete with the Washington shingles, but prices so far are too high. White cedars are quiet.

Market Correspondence

Favorable Logging Weather in the East.

St. John, N.B., Jan. 24.—The winter so far in this province and throughout the Maritime Provinces generally has been favorable to the getting of logs, and operators are taking advantage of conditions to the greatest possible extent. Judging from present conditions it would seem as if contractors would be able to get out the full quantity of the contracts. Advices from the up river logging sections state that there are from fourteen to eighteen inches of snow in the woods. Conditions for yarding have been excellent all through the season and this part of the winter's work is drawing close to its end.

A marked characteristic of logging operations of the present winter on the St. John and its tributaries is the quest for larger logs. This is the case particularly in spruce. It has been stated that the larger contractors are picking their logs with greater care than for many years and that the result will be that during the coming manufacturing season the local mills will have a better class of logs, so far, at least, as dimensions are concerned.

The portable mill industry will have one of the poorest winters in its history. Many of these small plants are tied up with little prospect of sawing this season. The cause is found in the fact that the prices of the manufactured article during the fall were not such as to encourage operations with plants of such a nature, where the cost per thousand is necessarily considerably higher than is the case with the output of the large mills.

The trade so far this year has been very quiet in this section and promises to continue so throughout the present month. Only three mills are running, so that the volume of manufactured material will not be important. Shipments by the winter liners have been somewhat in excess of last month's, but are not by any means more than the average.

The most important feature of the week is the rumor that shingles are weaker. If such is the case there is no indication of it in local trade circles, nor has it had any effect upon local prices. Any quotations made locally would be for delivery some time during the spring, as local stocks of shingles have been shipped up completely. Judging from present indications it will be well along in April before a quantity sufficient to make up a schooner's cargo will be ready for shipments at this port. An enquiry for a quotation on shingles with these conditions would bring some such price as \$3 per thousand on dutiable "Extras" and \$2.50 per thousand on dutiable "Clears" on the wharf at St. John.

The indications for trade on "English" deals are of a much brighter nature than has been the case since early in 1906, before the slump came. Local manufacturers and dealers are confidently expecting that the optimistic view of the situation as regards English deals is well founded and will be fully borne out. This feeling of optimism is having its natural effect upon prices and an enquirer for "English" spruce deals would be quoted from \$14.50 to \$15 per thousand, on a specification containing say 50 per cent. sevens and eights, 35 per cent. nines, and 15 per cent. elevens and up, on wharf at St. John.

Ottawa Manufacturers dispose of Season's Pine and Spruce.

Ottawa, Jan. 27.—Several lumbermen of the Ottawa valley have sold the coming season's cut of thin pine and spruce at almost as high a rate as last year. Gilmour & Hughson recently sold to Skillings, Whitney & Barnes and Ritchie Bros. have sold to Bryson & Fraser, a new lumber company of Ottawa just capitalized at \$40,000. In nearly all cases where the complete output of a mill is usually taken by one buyer prices have been agreed upon for the 1909 cut. Sometimes certain proportions of high grades are guaranteed. When the classification is specified there is usually a slight reduction in price of first quality. In this respect the thin lumber is affected by the market similarly to deal which was sold earlier in the season to British agents.

Frequency of inquiries for pine shorts and sidings give an indication of an early revival in the trade which otherwise is not overly promising. The limited number of the sales keeps quotations at a standstill. Standard grades of lumber are not likely to undergo a reduction in price, although owners of small mills sometimes sell lots of irregularly graded lumber below current rates.

The large manufacturers are using the slack period in sales for the purpose of stock taking. While they find the yards well filled and shipping dull, there is one feature much more favorable than last year. On the corresponding date in 1908 neither English nor American buyers had put in an appearance in the Ottawa valley and there was no evidence of their coming. Compared with a year ago, the quantity of unsold Ottawa lumber at the present time is small. Manufacturers are also better prepared to reduce the output of sawmills next summer than they were last. In addition to this, a loosening up of the money market is in evidence everywhere promising a more active building season. The stock of lath is exhausted in yards where every other sort of lumber is plentiful. The latest price quoted for white pine is \$3.50 per thousand for No. 1

variety, and \$3 for No. 2. The shingle market remains steady, the demand being the same as about a year ago.

Statistics made up from building permits issued in Ottawa last year show that 86 per cent. of the houses were either brick or brick veneer. The value of the latter is one million dollars, compared with half a million dollars' worth of solid brick building. The wood or frame structures are valued at \$125,000. There was a large increase over the previous year in the number of building permits, but the total value of the buildings was less. This circumstance was due to the fact that in the last year the majority of buildings erected were houses of medium size, whereas in 1907 such large structures as the Y.M.C.A. building, the Collegiate Institute addition and new wing of the House of Commons were started. The total number of building permits issued during 1908 was 507, this being 152 more than the previous year. The total value of the buildings erected in 1908 was \$1,794,075, as compared with \$2,364,950 in 1907.

J. R. Booth is building a power house at the Chaudiere on the site of his first sawmill, erected half a century ago. The new structure will house a plant for the generation of energy to run Mr. Booth's new box board mill which is to start in the spring. The present enterprise is interesting as an indication of the gradual growth of the paper making industry in the Ottawa valley. Eight or ten years ago Mr. Booth launched into pulp grinding, and has since erected mills for producing news print, sulphite and box board. The output of Booth's lumber industry was once in the neighborhood of 150,000,000 feet a year, while now the production is a little less than 100,000,000 feet. The ground which is now being levelled off for the foundation of the power plant was the site of a busy lumber mill until the big Ottawa-Hull fire cleared it in 1900. At that time Mr. Booth was beginning to manufacture spruce into pulp instead of deal and thin oards, so he never reconstructed that portion of his lumber factory. Any decline in his output of lumber is more than counter-balanced by the immense trade in pulp and paper.

Mr. Robert Connely, manager of the Bay Shore Lumber Company, St. John, N.B., reports excellent conditions for lumbering and that all the operations of the company are in full swing. The prospects are that all contracts will be filled without trouble. Mr. Connely recently returned from New York and Brunswick, Maine, where he went in connection with the business of the company. He says that about Feb. 20 they will resume the export of pulp wood from St. Martins and Great Salmon River to Maine by means of barges and tugboats. It is their intention to overhaul thoroughly the wharf property recently acquired by them in St. Martins and put it in good condition for business.

Gordon Grant & Company, Trinidad, report under date of Jan 9th that all yards are amply stocked with lumber of all kinds, and the market is gradually recovering from its depression.

Lumberman President for Ottawa Board of Trade.

Mr. Peter Whelen, the well-known lumber merchant, has been elected president of the Ottawa Board of Trade. Mr. Whelen is the only son of the late George Whelen, contractor, of Ottawa, who came from County Mayo, Ireland. His mother was Harriet Goodwin, a daughter of the late John Goodwin, of Dublin, Ireland, and sister of the late James Goodwin, the well-known Ottawa contractor. Both parents died when he was quite a boy. He was educated at the County of Carleton Model School, Ottawa.

At the early age of 21 he became manager of the Law & Johnston sawmills in Ottawa and afterwards was general manager for their successors, John Rochester & Company. Upon their retirement from business Mr. Whelen became the Canadian manager of the Sheppard & Morse Lumber Company of Boston, Mass., a position which he still retains, as well as being a large shareholder. Their business in Ottawa is largely an export one, the trade extending to the United Kingdom, the United States and South American states in addition to Canadian trade.

Mr. Whelen, as vice-president of the Ottawa Board of Trade, was one of its representatives at the Congress of the Chambers of Commerce of the Empire, which met in London, England, in July, 1906. He was one of the original promoters, and is vice-president of, the Ottawa Electric Railway Company. He is the founder and president of the Ottawa Investment Company, Limited; a director in the Ottawa Transportation Company, and a director of the Canadian Railway Accident Insurance Company. Mr. Whelen was a member of the City Council for four years, from 1881 to 1884.

Strict account is beginning to be taken by the authorities in the Province of Quebec of waste in lumbering. Stumpage dues are to be levied on (1) all stumps over one foot in height, measuring from the beginning of the roots; (2) all timber above six inches in diameter left in the tops; (3) all merchantable timber used for skids and not hauled; (4) all lodged trees; (5) all merchantable timber used for building bridges or making "corduroy" roads; (6) all logs left in the woods. A circular has been issued notifying lumbermen of these regulations. The first account for dues imposed for the above causes was recently filed and amounted to \$167.30. This was for only one river valley, and covered the cutting for fifteen days only!

EDGINGS

Ontario

The business of the City Sash & Door Company, London, Ont., is advertised for sale.

The McMaster Lumber Company, Kemptville, Ont., will erect a large sawmill.

W. McVicar & Sons, lumber manufacturers, Port Elgin, have assigned to W. C. Bullock.

The Gould Broom Manufacturing plant at Kingston, Ont., was recently destroyed by fire.

Bryson & Fraser, a recently incorporated lumber company at Ottawa, Ont., have commenced business.

The box factory at Brantford, Ont., owned by W. J. Hampel was destroyed by fire recently at a loss of \$10,000.

The McLeod Pulp & Paper Mills have started to manufacture boxboard at Milton, Ont., and intend to manufacture paper in the near future. The pulp mills of this company are turning out about 80 tons of pulp per day.

Recent Ottawa incorporations include: W. D. Morris, Limited, incorporated to deal in lumber, brick, etc.; capital, \$150,000. Incorporators, W. D. Morris, G. B. Acheson, R. G. Code and others, all of Ottawa.

The Tomiko Mills Limited, Tomiko, Ont., lumber manufacturers, have obtained a charter with capital of \$75,000. Incorporators, E. J. Buckham and A. S. Duff, Tomiko, Ont.; W. Anderson, Ottawa, Ont.; G. B. Ferguson, Renfrew, Ont., and J. J. McFadden, Toronto, Ont.

E. R. C. Clarkson, of Toronto, made an appeal against an assessment of 95 cents a thousand feet on 40,000 acres of timber land located near Salmon river on the Nelson & Fort Sheppard Railway in the Kootenay. It was heard at Nelson, when expert witnesses were examined, with the result that the court sustained the valuation.

The Gordon Pulp & Paper Company, Dryden, Ont., have closed a contract with the Stebbins Engineering & Manufacturing Company, of Watertown, N.J., for the entire equipment of machinery and apparatus required for their 40-ton sulphite plant now in course of construction. The company has at this point on the Wabigoon river a good water power and mill site, where 5,000 horse-power will be developed under a head of 46 feet. Samuel Nesbitt, Brighton, Ont., is president of the Gordon Pulp & Paper Company, and Chas. B. Gordon secretary and general manager.

The Carnegie Milling Company are erecting a sawmill at Port Perry, Ont. Loveland & Stone, Cutler, Ont., and the Saginaw Lumber & Salt Company, Thessalon, Ont., estimate the entire loss of timber in the Georgian Bay country by forest fires last summer at not to exceed 40,000,000 feet, and believe these are outside figures. This is increasing the input of logs to some extent. They say there is little unsold lumber in the hands of manufacturers in their district at this time and some lumber firms already have contracted their entire cut for the ensuing season. The market there is decidedly stronger, and indications point to a good demand in the spring.

Eastern Provinces

E. I. White & Son, lumber dealers, Oxford, N.S., have discontinued business.

V. E. Paradis has been appointed curator in the affairs of E. Forcier, lumber manufacturer, St. Pierre, Que.

A young lumberman of Millville, N.B., named George Hallet, aged 28 years, was killed in the Miramichi lumber woods last month by a falling timber.

Shearer, Brown & Wills, Buckingham, Que., are getting out a lot of sawlogs this winter to be cut up at their mills above the Landing, under the superintendence of their new manager, Mr. Phelin, of Montreal.

At Fredericton, N.B., a timber berth consisting of two square miles on the north side of the Cocagne river, Kent county, was bid in by the C. E. Lockhart Company, of Kent county, at the upset price of \$20 per square mile.

The St. Maurice River Boom & Driving Company, Limited, Three Rivers, Que., have been incorporated with a capital of \$25,000. Incorporators, R. F. Grant, J. M. Dalton, A. Baptiste and V. Burrill, all of Three Rivers, Que., and others.

John Scott, a timber cruiser of Glassville, N.B., recently met with a bad accident. He was out in the woods cruising and was carrying a rifle in his hand through the brush when, by some means, the rifle discharged, taking three fingers off his right hand.

A charter has been granted to the Labrador Pulp & Paper Company, Montreal, Que., capital, \$1,500,000. Incorporators, E. Hutcheson, J. A. Richards and B. Stephens, all of Montreal, Que., and R. Smith and E. H. Weatherall, both of Westmount, Que.

An operator named Bradford Smith, of Summerfield, N.B., met with a terrible death last month while working in a sawmill. In some way his foot became entangled with a shaft and his body was thrown around and when found was completely torn to pieces.

O. Chalifoux & Son, Limited, St. Hyacinthe, Que., have been incorporated to manufacture agricultural and logging machinery and implements, capital, \$100,000. Incorporators, H. T. Chalifoux, P. T. Chalifoux, A. Sauve, all of St. Hyacinthe; H. J. Chalifoux and J. L. Chalifoux, both of Montreal.

The St. John Lumber Company, whose plant is on the American side of the St. John river, two miles above Van Buren, has 1,500 men and 300 horses in the woods this winter getting out 30,000,000 feet of logs for next season's sawing, and this quantity, with logs carried over from last season, will give a total log stock of 45,000,000 feet for 1909.

At Halifax, N.S., Judge Russell recently gave a decision in favor of defendant in the case of Mason, of Montreal, v. Captain Howard, of the schooner "H. J. Logan," as the vessel was compelled to put into Halifax through stress of weather. The plaintiff, a lumber merchant, demanded delivery of a cargo of lumber consigned to him, which the defendant was too late for St. Lawrence navigation to bring up.

HUTHER BROS.

Hollow Ground Combination Tooth Mitre Saw

Patent Groover or Dado Head

For either Rip or Cross Cutting

Will cut equally as smooth in either Ripping Cross-cutting or cutting at an angle of 45 degrees, with grain of wood.

Allow us to quote Prices on Saws for any special work that you wish to do.

HUTHER BROS. SAW MFG. CO., Inc.

Can be used on any Circular Saw Mandrel

For cutting any width groove from 1/8" to 2" wide. Will cut either with or across the grain (Sent on approval).

ROCHESTER, N. Y.

A St. George, N.B., despatch states that about 800,000 feet of logs recently broke loose because of the overflowing of the Piskehegan stream. The dam gave way and the water and logs rushing down carried all the piers and booms. The logs were carried into a canal which leads into Lake Utopia, and the logs and ice were jammed in a mass at Young's Bridge a mile and a half above St. George. The logs are the property of the St. George Pulp Company.

Western Canada

T. R. Brigham, Vancouver, will erect a large saw mill at Fort Essington, B.C.

A contract for 75,000 ties has been let by the C.P.R. to Wallace & McLeod, of Nanaimo, B.C.

The Sayward mills at Victoria, B.C., are running again with a complete outfit of new machinery.

A shingle mill will be built at Esquimalt, Vancouver Island, by H. Bacus, of Seattle, who has already selected the site.

J. S. Emerson, of Vancouver, is building a planing mill and sawmill at Eburne, on the Fraser River, near the mouth.

C. A. McGilivray, of Bellingham, Wash., has purchased a site on the corner of Strathcona and Boundary avenues, Vancouver, B.C., for the erection of a large sawmill.

The Western Canada Pulp & Paper Company, Limited, Victoria, B.C., capitalized at \$1,500,000, are considering the immediate erection of a large pulp and paper mill on Quatsino Sound.

The Canadian Industrial Company, Vancouver, B.C., will erect a large paper and pulp mill at a site on the Powell river. Mr. A. Carmichael, hydraulic engineer and contractor, is now engaged upon plans.

Pennsylvania and Chicago capitalists have been inspecting 117 square miles of timber on Moresby Island, B.C., owned by Messrs. Wallace, McMillan & Murray, of Queen Charlotte. Several sites for a sawmill were also looked at.

The Canada Chemical & Wood Distilling Company, Limited, Chilliwack, B.C., capitalized at \$20,000, are applying for incorporation. Arrangements are now being made for the erection of a building and the installation of machinery.

The Heaps Telephone Company, Limited, New Westminster, B.C., are planning to construct a railway, to be operated by either steam or electricity, for the logging of their timber limits located along the west side of Stave river.

While two rafts of lumber for the railway camps were being floated down stream in the Kitsumkalum district, B.C., they were caught by the cold snap and frozen in the ice. The rafts aggregate many thousand feet of lumber, all of which will be a total loss.

A Victoria, B.C., despatch states that the Western Canada Wood Pulp & Paper Company have acquired the entire pulp limits, foreshore rights and water privileges from the Quatsino Power & Pulp Company and will at once erect a large mill on Marble Bay, Quatsino Sound.

It is reported that owing to the depression, the Crow's Nest Lumber Company at Wardner is not paying any wages this winter and that men taken on have to sign an agreement to wait until May 1 for their pay, as it is only by doing this that the mill and camps can be kept operating during the winter.

Small sawmill owners and loggers in British Columbia will ask the government to make the timber holders sell logs at a reasonable price, and, failing that, to throw open the government reserve for bona fide loggers and millmen that they may cut for their immediate needs. They claim that handy timber is about exhausted, the rest of the available supply being held by speculators.

Eastern capitalists will take over the holdings of the British Columbia Timbers, Limited, on the upper Fraser river, comprising about four and a half billion feet. Several parties were inquiring after these limits, which are conveniently situated for lumbering operations. The British Columbia Timbers, Limited, is a Montreal company, with head office for British Columbia in Revelstoke.

During the last five months about 140 sections of timber located on the west coast of Vancouver Island have been transferred through the agency of P. D. & H. M. Hillis, of Victoria, B.C. It is stated that, in the majority of instances, the buyers have been American capitalists who, being interested in the lumber business, contemplate actively exploiting their new holdings. The movement is still active, and 12 cruisers recently went up by the steamer "Tees" to Nootka Sound to report on 122 sections of timber there.

The Heaps Timber Company, of Vancouver, which was recently incorporated with \$1,000,000, is planning the construction of a railway to log 20,000 acres of timber located along Stave river and lake. Surveyors are now working on the line, and it is the intention to have the first section in commission before midsummer. E. H. Heaps & Company, which might be called the main company, have a saw and shingle mill at Ruskin, at the junction of the Stave and Fraser rivers, about forty-six miles from Vancouver, on the main line of the Canadian Pacific. Most of the timber will be manufactured there, but some will be boomed and brought down the Fraser river and around the headland to Vancouver.

Preparations are being made by the Brooks-Scanlon-O'Brien Company to carry on operations on an extensive scale in the neighborhood of Vancouver. An office has been opened there, with H. D. Blackford in charge. Twenty-five men have been put to work to make roads and camps for logging operations on the limits near Harrison, acquired last year. In connection with what was proposed, Mr. Blackford said that the company was incorporated for \$1,750,000, and was amply supplied with funds to carry out the great scheme undertaken. Ground has been bought at Harrison, but it was not yet decided if a mill would be erected there. Three mills will be erected, and though the locations had not yet been selected two of the mills will be accessible for ocean vessels, while the third will be designed more to handle the retail trade.

C. A. Lillesburg, of Kitsumkalum, B.C., reports an eventful journey on foot over one hundred miles of the frozen surface of the Skeena river, with the thermometer at twenty below zero. While rounding a certain point he was blown from his footing by a sudden gust of wind and swept out upon the thin ice, which bent and cracked beneath him. Lying prostrate so as to distribute his weight, and prevent the ice from breaking, he was swept across the thinly-covered surface and reached the other side in safety. Mr. Lillesburg owns a sawmill at Kitsumkalum, and reports doing a good business. The railway camps along the Skeena have created a demand for lumber, and his mill has been kept running steadily until last week when the Skeena froze over, and was forced to shut down. The men are now engaged in logging, and in the spring the mill will be started up again.

DeLoach "Prince" Hand Feed Shingle Mill

JOHN H. CRANE
Manufacturer of Lumber and Shingles
DeLOACH MILL MFG. CO., MONTEREY, ALA., JULY 2, 1907.
BRIDGEPORT, ALA.

GENTLEMEN,—I purchased from you in 1905 a "Prince" hand feed shingle machine. I have operated it and find it all you claim for it. We cut at the rate of 30,000 shingles in 10 hours and made first class shingles. I consider your machine a very light running machine. If I wanted another hand machine I would certainly buy a DeLoach Prince.

With best wishes for your success, I am

Yours very truly,
JOHN H. CRANE.

Send for Catalogue of Engines, Boilers, Gasoline Engines, Saw Mills, Shingle Mills, Planers, Gang Edgers, Lath Mills, Grinding Mills, Water Wheels, Etc. Complete Circular and Band Mill Equipment.

Dunbar Shingle Machine

Universally admitted to be the
BEST SHINGLE MACHINE
made

Are You in the Market for Shingle Mill Machinery?

If so, we can supply you with everything in a Shingle Mill. The largest Shingle Machinery Manufacturers in Canada. The satisfaction experienced by lumber men in dealing with us is daily adding to our list of customers the most prominent firms in Canada. We are the only firm in Canada that makes ring oiling boxes in our Shingle Machines, which does away with all hot boxes.

Sapper ready for work.

Our New Sapper

Sapper showing Disc and Knives.

Our Sappers are the best money savers in a Shingle Mill. Will bark the blocks for 8 or 10 Shingle Machines easily. Is made very heavy and wonderfully well balanced. No Shingle Mill is complete without one.

Write us for Catalogue and further particulars

Reliable Veterinary Remedies

No logging outfit is complete without a supply of reliable veterinary remedies. Getting the wrong kind means the loss of the use of your horses when time is valuable.

Johnson's Veterinary Remedies are guaranteed never to fail when used as directed. You get your money back if they ever do.

They are

Johnson's Horse Liniment No. 1.

A penetrating Alcoholic Liniment. Put up in one gallon jugs, with full directions, per imperial gal. \$4.50

Johnson's Horse Liniment No. 2.

A combination of the best oils used as liniments, imp gallon \$3.00

Johnson's Horse Colic Remedy.

A sure and speedy cure for colic. Imperial gallon \$5.00

Johnson's Veterinary Healing Ointment.

Positively the best all-round healing ointment made. In use by the largest owners of horse flesh in Canada. Put up in 2 lb tins, each \$2.25

or in 1/4 lb tins, per dozen \$3.50

Johnson's Condition Powders. (Concentrated).

Put up in bulk, per lb. 30c.

These goods being put up in bulk are more economical than others, as cost of bottling, etc., is saved.

CAMP REMEDIES.

In addition to our Veterinary Remedies we make a line of medicines for lumbermen, including a strong, penetrating liniment, healing ointment, cholera cure, liver pills, cough syrup, in fact anything in the form of Camp Drug Supplies. We know that there are no better remedies made than those we offer. There may be others nearly as good, but they lack our guarantee. Satisfaction or money back. A trade discount of 10% allowed off all orders amounting to \$100.

Send postal for printed matter.

Represented in the Province of Quebec by

Williams & Wilson

St. James St., MONTREAL

There are more DISSTON BRAND Band and Circular Saws used than any other make, and by a large majority.

WHY?

Because millmen and sawyers recognize by the use of the DISSTON SAWS they obtain the greatest results for the least cost.

WE MAKE THIS STATEMENT WITHOUT FEAR OF SUCCESSFUL CONTRADICTION.

POINTS OF MERIT

MATERIAL

FINEST
CRUCIBLE STEEL

UNIFORMITY.
TOUGHNESS.
GREATEST TENSILE STRENGTH AND ELASTICITY.

**HARDENING
AND
TEMPERING**

DISSTON
METHOD

Being Manufacturers of our own steel, and thoroughly familiar with its makeup, we are able to absolutely adjust the hardening and tempering processes to the degree giving that perfect combination of hardness and toughness that produces the "edge, tension-holding and standing up qualities" for which the DISSTON SAWS are renowned.

GRINDING

DISSTON
METHOD

By the DISSTON METHOD all Band Saws are ground perfectly flat and uniform in thickness, thus making possible a very close adjustment of the guides without creating any friction or heat when in operation at the highest rate of feed; and all Circular Saws, whether tapered or of even thickness, are perfectly flat ground on the surface, thus insuring in all saws perfect clearance and true balance.

TENSIONING

DISSTON
METHOD

The uniformity of the material, temper and grinding is a large factor in the proper adjustment of tension; and this, together with the Disston process of tensioning, is the reason why the DISSTON SAWS will manufacture more lumber, under the same conditions, than any other brand of saw.

In the DISSTON BRAND of SAWS you have the advantages of the product of a progressive, up-to-date saw factory, the LARGEST IN THE WORLD, and where saws are made throughout, from the making of the steel itself—the superiority of which has been demonstrated for the past fifty-three years—to the finishing operation, and each process is performed by mechanics of long experience and highest order of skill.

NEW ORLEANS, Louisiana 121 Carondelet Street

We Make All Kinds of Machinery and Tools for the Care of Saws

Hanchett Automatic Rip and Cross-Cut Circular Saw Sharpeners

All our automatic sharpeners have the same general principles of construction, with the friction feed, direct drive, adjustable cam, strong frame construction, and other improvements embodied in our band saw sharpeners. Also, in connection with the device for beveling the teeth of cross-cut saws we have made further improvements, the value of which is readily apparent, as also is the case with our adjustments of the emery wheel. Any amount of bevel can be secured, or any change made in the bevel, by simply turning a hand wheel, and this can be done just as easily while the machine is in motion as when it is still. This is an improvement over stopping the machine to change the bevel, and also permits any bevel wanted, instead of allowing for only two or three changes, as on other machines. These machines will either bevel both sides of the teeth or bevel front and square back, and vice versa. In other words, they will give any system of sharpening desired. Unless otherwise specified, we send out the machines equipped with beveling both sides only.

We furnish the same adjustable cam with these sharpeners that is used on our band saw sharpeners, and furnish two cams with each machine — one for rip saws and one for cross-cut saws.

The emery-wheel has two adjustments and works through a double head. An up-and-down adjustment is afforded by means of a gate, and is adjusted for depth of throat in saw by means of a hand wheel situated at the top of the head. A lateral adjustment is effected by a horizontal gate situated at the top of the vertical gate, and this also is adjusted by a hand wheel, independently of the vertical adjustment, and thus all that is necessary in order to adjust the emery-wheel so as to perfectly center the different saws is to turn the hand wheel changing the horizontal adjustment, in this way adjusting the emery-wheel to fit the saw instead of trying to adjust the saw to fit the emery-wheel, in the crude way attempted with other sharpeners.

"THE DUNBAR"

New and Improved

STEAM LOGGING ENGINES

This is the machine for which we claim all the good Qualities possessed by any other and a great many valuable improvements besides.

Best on the Market

This time we wish to call your attention to one of many important points which prove conclusively the superiority of the **Dunbar Logging Engines**: that of the Hydraulic Apparatus for raising and lowering the Boiler, an invention of our Mr. Dunbar, Sr. (for which patents are pending). By this device all danger from rush of water to either end of the Boiler, caused by irregularities of the road, is avoided. One of the most serious drawbacks in other Engines is the fact that the Boiler is stationary on the frame, consequently a source of great anxiety because of the danger to both the Crown Sheet and the Tubes. You can readily understand that in going up or down hill either the Crown Sheet or the Tubes are bared, causing them to become so heated that they will leak badly, and after repetition for a time the Boiler will be practically ruined.

This improvement, which supersedes our previous method for raising or lowering the boiler, has been added since cut herewith shown was made.

Should you contemplate putting in a Logging Engine we shall be glad to take the matter up with you and give you all particulars.

Quotations for Logging Sleds furnished.

This Saw Stands Without a Rival

AND IS THE

FASTEST CUTTING SAW IN THE WORLD!

Its Superiority consists in its Excellent Temper. It is made of "Razor Steel," which is the finest ever used in the manufacture of Saws. We have the sole control of this steel. It is tempered by our secret process, which process gives a keener cutting edge and a toughness to the steel which no other process can approach.

Maple Leaf Saw Set

MANUFACTURED BY

SHURLY & DIETRICH, Galt, Ont.

Directions.—Place the set on the point of tooth, as shown in the accompanying cut, and strike a very light blow with a tack hammer. If you require more set, file the tooth with more bevel.

If you follow directions you cannot make a mistake. Be sure and not strike too hard a blow, and it will set the hardest saw. On receipt of 40 cents we will send one by mail.

We are the only manufacturers in the world who export Saws in large quantities to the United States.

We Manufacture

HIGH GRADE BAND SAWS

Of All Widths and Lengths.

These Saws are made of Refined Razor Steel, and tempered by our Secret Process; for Fine Finish and Temper are not excelled.

A word to the Trade about Hot Air, 3,000,000 a day shingle advertisements

The FULL daily capacity of the 200 shingle machines in British Columbia is 4,000,000 shingles. On an average during the months of operation about ten per cent or more of these machines are idle; and it is also well within the truth to state that almost the WHOLE Shingle Industry of the Province is closed down tight from three to four months during every year; and the local consumption of shingles in the Coast cities and towns—about 300,000 per day, must be deducted from the rail shipping capacity; also as shingles are now being marketed, it is safe to state that fully one-third of the out-put will be sold by manufacturers DIRECT to the retail trade. The net result of the above is about 2,200,000 B.C. Shingles per day available for rail shipment, and to be divided amongst ALL the brokers and wholesalers in Canada and the United States who handle our shingles.

From the above facts, Lumber Dealers can judge for themselves as to how much truth there is in an advertisement which states a SHIPPING CAPACITY of 3,000,000 shingles daily.

We are the OLDEST established strictly Wholesale Lumber Dealers in British Columbia, and are in a position to supply the Trade with their lumber and shingle requirements.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Special care is taken to secure for publication the latest and most trustworthy market quotations throughout the world, so as to afford to the trade at home and abroad information on which it can rely in its operations.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Vol. 29

Toronto, February 15, 1909

No. 4

The Lumber Trade in 1908.

The statistics published in this issue give a good idea of the volume of the lumber business in Canada during the past year and afford a useful basis upon which to estimate the conditions which will prevail during the season of 1909. In a review of the trade conditions for 1908 a few salient points stand out above all the others. To begin with the season opened under circumstances of financial depression which augured ill for the trade. The partial failure of the crops in 1907 and the heavy production of the period preceding the small crop, provided conditions which were ideal for a financial panic. Had it not been for the good sense of those who foresaw the trouble and came forward with counsels of conservatism and patience there would have been a much more serious tale to record for 1908 than the actual one.

The lumber trade opened with a dull period and the demand fell off steadily throughout the spring and summer until it had become stagnant. Fortunately for lumber manufacturers the financial depression commenced early enough in 1907 to give them good warning and they curtailed their winter operations to some extent. This prevented the accumulation of extensive stocks in the dull summer of 1908. Much of the timber cut of 1907-08 was not manufactured. Although there was no business in 1908 which could be called profitable, there was nothing in the form of a panic. Manufacturers in a majority of the cases were sound enough financially to weather the storm. Indications of a good crop for 1908 materialized early in the summer and manufacturers foresaw that if they waited quietly they were certain, sooner or later, to have their innings. The improvement commenced gradually when the crop was assured, but it was met with some heavy rebuffs which involved serious results. In New Brunswick the shingle operators went on strike about the end of April. They refused to accept a cut in wages for the sawyers and bunchers. The strike

continued until early in October, when the men agreed to the reduction. In the meantime the shingle mills had been idle all summer to the irreparable loss of both owners and workmen. This will have a great effect upon the cut of cedar logs this winter, as most of last winter's cut is still in store and will last well into the season of 1909.

Another serious matter, which affected the operators in the Ottawa Valley more than those in other parts of the country, was the strike in the cotton mills of England. The demand dropped off for the class of pine lumber known as "squares" or "rollers" which are used in the manufacture of cotton. All this lumber was manufactured in Ontario and many manufacturers were injured. The Ottawa lumber trade was also seriously affected by the low water in the Ottawa River, which prevailed for several months at the end of the summer.

In Western Canada the trade was depressed by over-production throughout a great portion of the year and by a disagreement between the coast and the mountain manufacturers. Prices fell to a level which meant a loss, especially in regard to shingles, and for a period, the condition prevailing was one of every man for himself. The selling arrangement under which the orders for shingles were allotted to the different mills in proportion to their equipment was abandoned, and ruinous prices were adopted. An improvement has set in at last, but it is not a result of wiser counsels. It is the direct outcome of a better demand for shingles in the United States. Were this demand to fail again, the same unfortunate conditions would probably return. Along with the improvement in the demand for shingles has come a similar improvement in lumber, and the result is an increase of \$2 per thousand feet on common grades in Vancouver. It is expected that this advance will become general at other points. It is generally hoped therefore that the depression has come to an end and that 1909 will see a much better demand in every line.

The depression was aggravated for the manufacturers in British Columbia by the high price of logs. For much of the season of 1908 fir logs were selling for more than the price of the lumber into which they could be manufactured. The only cure for this condition, which seems to be apt to continue for some time, is a better price for lumber. Fir logs are still high in price and cedar logs have advanced since the Government replaced the embargo upon their export to the United States.

Looking over the whole country one finds that in Ontario, trade was quieter than anywhere else, but that at the same time it was less beset with serious loss to the manufacturers. They adopted from the first a policy of patience, and though they are still waiting, the improvement has commenced, and they hope to do a fairly good trade in 1909. There are many factors which can be counted upon to assist in bringing about an improvement. The money received from last year's crop is already in circulation and the banks have plenty of money to lend at cheap rates of interest. Operations in the woods this winter have been greatly curtailed. The demand in Great Britain and Europe has revived and good prices have been received at St. John and at Ottawa for 1909 product. As the summer advances it is believed that these prices will be greatly stiffened.

It may be said therefore that the year 1908 was not so bad a year after all. It was a trying period for everyone in the lumber business, but most of them have come through safely and their position is all the sounder for the purging which the trade has experienced. Still there is need for caution. Careful appreciation of the character of the demand is needed more now than at any other time. Above all it is necessary that an end should be put to the policy of price cutting which was responsible for more of the depression than most manufacturers would care to admit. Every manufacturer at one time or another has reason to complain of this on the part of some other manufacturer, but it would be difficult to find one who is entitled, on the score of innocence, to cast the first stone. The exigencies of the situation for the time being forced many a manufacturer to accept orders which went sorely against his good judgment.

The story in regard to the prices which have been in force throughout the past year is quickly told. In practically every line they declined, and the drop varied from \$2 to \$10 per thousand. The average difference between the prices prevailing at the beginning of 1908 and those which prevail to-day is about \$4 per thousand. All through the season of 1908 it was almost an impossibility to obtain accurate quotations which applied generally, as much of the business was accepted at whatever price could be obtained. The variations in price were extensive, though they seemed to be touching bottom nearly all through the year.

Annual Review of the Lumber Trade

Statistics of the Year's Operations Throughout Canada—A Slightly Reduced Cut and Lower Prices—Outlook Gradually Improving

ONTARIO

The lumber production in the Ottawa Valley during the summer of 1908 was not affected by the dull market. The total output is in the neighborhood of 500,000,000 feet, or about the same as the last few previous years. The drop of 10,000,000 feet in the cut of Booth's mill was due to low water which necessitated running the mill only intermittently for the last couple of months of the season. Gillies Bros., Braeside, and the Hawkesbury Lumber Company had a slightly smaller production, due to the same cause. The latter had to close several weeks before the usual time. Owing to the motive energy being supplied by steam the W. C. Edwards Company produced the average quantity, 75,000,000 feet. In a few instances, as with the two lumber companies of Pembroke, there were larger productions than the year before, owing to more night work. The Shepard & Morse Company sawed 18,000,000 feet at its own mill and had a few million sawed by Richie Bros., of Aylmer, bringing their amount up to 14,000,000 feet. A considerable quantity of the lumber is being carried over to next summer but the large sales of the 1909 cut that have been made at this comparatively early date give assurance that the market is not likely to be overstocked.

Ottawa Valley Production.

	1907—feet.	1908—feet.
J. R. Booth, Ottawa	90,000,000	80,000,000
W. C. Edwards & Co., Rockland & New Edinburgh	75,000,000	75,000,000

Total	532,000,000	503,000,000

Georgian Bay and Trent Valley Production.

The Georgian Bay and Trent Valley lumber production for the year 1908 showed some falling off, the decrease being about 71,000,000 feet. This is accounted for largely by the decrease at the larger centres, such as Gravenhurst, Byng Inlet, Midland and Parry Sound. Generally speaking the cut was a little lighter, though not by any means so much less as one might have expected. Gravenhurst showed a decrease of 17,000,000 feet, Byng Inlet 12,000 feet, Midland by 7,000,000 feet and Parry Sound by 10,000,000 feet. Places where the cut increased included Little Current, 500,000 feet; Thessalon, 20,000,000 feet, and Spanish Mills, 4,000,000 feet. Places where the cut increased included Little Currents on the Georgian Bay and Trent Canal and districts tributary thereto:

	1907—ft.	1908—ft.
Midland	52,132,000	45,880,000
Parry Sound	34,000,000	24,000,000
Little Current	60,000,000	65,000,000
Byng Inlet	50,000,000	38,000,000
Blind River	61,352,941	57,000,000
Thessalon	26,494,000	46,600,000
Collingwood	14,000,000	16,000,000

Total	775,523,941	704,072,000

BRITISH COLUMBIA

The lumber business in British Columbia during 1908 was even less satisfactory than in Eastern Canada. Poor crops and tight money resulted in a very small demand from the prairie provinces, while for export little business could be carried on, and the prices were unsatisfactory. Losses will be sustained to the extent of the stocks of lumber on hand and of such logging and lumber or timber making as could not be avoided. British Columbia, however, is fortunately situated inasmuch as the log is near the mill and adjustment of supply to demand can be quickly made. As a result there is a better outlook already and it is confidently believed that the trade will be in a healthy condition before long. The stringency in money did not affect the value of standing timber, although perhaps some speculators may have been forced to sell at a concession.

The close of the year 1908 found a considerably improved state of affairs on the coast. Stocks both of lumber and logs were much reduced. At the commencement of the year it was estimated that there were 175,000,000 feet of logs in the water along the coast, and the stock of lumber was extremely heavy. The latter has been materially reduced and there are not now in the water more than about 75,000,000 feet of logs. This is an inadequate supply, and logs are both scarce and high in price at present. The price in fact is so high that it does not pay to manufacture lumber at present.

Interviews with a number of mill men resulted in a general consensus of opinion that the lumber business itself proved a failure for the year, and that logs sold at little above cost. This was owing to the unsatisfactory financial conditions of the country at large and to the bad weather conditions which prevailed locally. In the early part of the year logs were a drug upon the market. The mills and the toredos had a race for the possession of the cedar logs. Matters came to such a crisis that an appeal was made to the Provincial Government to permit the sale of second and third grade cedar in the United States. This course was adopted, with the result that the Government received a stumpage revenue of \$35,000 from this source, relieved the log market from the glut, and put \$500,000 in circulation. Fir logs, however, continued in no demand, even at the low price of \$6. Logging camps were obliged to shut down in many quarters. When the lumber business revived weather conditions were unfavorable for logging. The logs already in the water were gradually consumed by the mills, and the price rose from \$6 to as high as \$10. Many of the mills, however, at this time, closed down for repairs, and the lack of demand for logs put a complete stop to logging.

The local lumber trade was an important factor with the local mills and in some cases saved them from suspending operations during a part of the year. The local prices for a period were better than those which could be obtained for export. The net result of the season's business was that about 60 per cent. of the mills sold their cut for about \$12 while paying from \$6 to \$10 for logs.

Manufacturers and retailers generally are inclined to believe that the outlook to-day is much better than it was at this time last year. The stocks on hand are by no means so enormous as they were at that time. The revival of the demand is expected to result, without any doubt, in an upward movement of prices.

The quantity of logs scaled on the coast for the twelve months of 1908 amounted to 403,273,739 feet, which is considerably less than the figure for 1907. The monthly figures were as follows: January, 30,372,142; February, 22,802,865; March, 19,837,395; April, 28,244,682; May, 36,126,457; June, 37,547,903; July, 44,681,142; August, 29,265,783; September, 50,357,480; October, 38,296,821; November, 32,146,141; Decem-

ber, 33,654,728. The timber revenue obtained by the Provincial Government amounted to \$2,657,696.

The comparative statement of timber revenue for 1907 and 1908 is as follows:

	1907	1908
Rentals for timber leases	\$ 83,045.37	\$ 83,045.37
Timber licenses	1,363,131.00	2,301,499.47
Timber royalty	256,045.38	255,095.15
Scaling fees	18,430.03	17,579.50
Total	\$1,723,023.28	\$2,657,696.39

The price of lumber for all grades did not exceed, the year round, \$14 a thousand. Inasmuch as it costs about \$6 to manufacture lumber, the manufacturers claim that the consumers had by far the best of the bargain. Some of the manufacturers claim that their mills show a heavy loss on the year's sales.

The shingle business during 1908 was in a most unsatisfactory condition. Apparently there are too many mills in the province, with the result that the keen business competition prevented profits from being obtained. The United States trade was the salvation of the shingle business. Although there was but a slight margin of profit on sales of shingles in the United States it was better than in Canada. Manufacturers claim that it was difficult even to obtain cost price in Canada during 1908.

A matter which attracted much attention during the year is the fact that the quantity of timber in the province, which is readily accessible, is growing scarce. Many exaggerated opinions have been expressed regarding the amount of marketable timber in the province. Some claim that the generally accepted estimates are in excess of the actual quantity by quite one-half.

The mills of the interior of British Columbia at the beginning of 1908 had on hand 190,000,000 feet of sawn lumber and 120,000,000 feet of logs. It was then estimated that January, 1909, would find them with about 410,000,000 feet, or 100,000,000 feet added to the total. The year 1908 was far from a good one. The principal cause was the stringent financial condition of the whole continent. The present year opens with much better prospects for the lumbering industry in the Kootenay and elsewhere throughout the province. A decided improvement in the demand is expected. A fortunate result of the small demand for lumber during 1908 has been the settlement of many accounts which were overdue from the previous year. A good many lumbermen kept their stocks in their yards, rather than sell them on account. As a result the financial conditions were greatly improved. The expense of cutting for the year was much reduced, on account of the large supply of logs on hand. Mill men are quite hopeful about the season of 1909. They base their optimism upon the fact that they have large forests at hand which are attracting the attention of the civilized world, and they believe that in the near future prices will advance to such an extent as to make timber holdings extremely valuable.

QUEBEC

The lumber trade in Quebec was far from satisfactory in 1908. The figures of the year's business indicate that the trade is decreasing steadily. The available timber for export is gradually diminishing and even advanced prices have not assisted in increasing the production. Consumption also is restricted by the higher cost. The exports of wood goods from St. Lawrence ports during the season of 1908 showed a decrease of 48,180,321 feet as compared with 1907. The totals were: 1908, 214,473,751 feet; 1907, 262,654,072 feet. For shippers from Canada and importers into Great Britain the year was alike unsatisfactory. This was accounted for largely by the great falling off in business generally. Shipbuilding was greatly affected, as many of the leading yards were for a time absolutely empty. The building trade of Great Britain was also greatly affected and has as yet shown no signs of improvement. There is a general belief, however, that the worst has been passed and that better prices may soon be counted upon. A decided improvement has already been made in the better grades of pine lumber as a result of an improved demand from the United States, while in Great Britain, spruce deals and Baltic goods show a very marked recovery from the low figures to which they had fallen. Renewed confidence is steadily gaining ground.

The timber trade in Quebec showed a decrease even from the year 1907, when there was so great a decrease in the amount of the trade. The only class of wood in which there was an increase in the production was oak, which increased from 404,160 cubic feet to 596,160 cubic feet. There was a large falling off in the production of ash and elm. Other classes were only slightly less than in 1907. The figures are as follows:

Timber production for Five Years in Cubic Feet.

	1904	1905	1906	1907	1908
Square pine	240,176	137,440	76,720	136,200	132,560
Waney pine	2,256,352	1,210,920	676,600	1,148,840	1,060,880
Red pine	15,920	1,200	13,400	8,400	8,200
Oak	328,360	193,920	578,120	404,160	596,160
Elm	262,800	484,720	602,160	212,360	87,640
Ash	14,640	10,440	8,880	25,880	8,040
Birch and other woods..	125,920	156,360	214,760	99,480	91,640

The statistics of square timber measured at the office of the Supervisor of Cullers, Quebec, from 1890 to 1908, show a tremendous falling off in timber shipments from the port. From a total of over eleven million cubic feet in 1890, they have now fallen to less than two million cubic feet. Following are the returns:

1890....	11,092,203	1895....	5,498,500	1900....	4,010,838	1905....	2,195,000
1891....	4,295,112	1896....	5,181,173	1901....	4,155,353	1906....	2,167,640
1892....	7,841,227	1897....	7,764,297	1902....	3,854,880	1907....	2,035,320
1893....	6,687,077	1898....	4,990,950	1903....	4,072,560	1908....	1,985,120
1894....	5,342,709	1899....	4,247,710	1904....	3,244,168		

Details of Quebec Trade.

The particulars of the Quebec trade, as furnished by J. Bell Forsyth & Company's circular, published by the Quebec Chronicle Printing Company, are as follows, the quantity being given in cubic feet for all but spruce and pine deals, which are given in Quebec standards:

The statistics of the Canadian export trade in wood goods from the St. Lawrence ports for the season of 1908 are as follows:

Shippers.	Montreal.	East of Montreal	Total ft. Bd. meas.
W. & J. Sharples	10,288,485	17,816,189	28,104,674
Dobell, Beckett & Co.	6,705,569	14,750,129	21,455,698
J. Burstall & Co.	11,207,212	9,273,747	20,480,959
The McArthur Export Co., Ltd.	4,702,898	5,459,112	10,162,010
Price Bros., Ltd.		27,675,000	27,675,000
H. R. Goodday & Co.		19,602,011	19,602,011
Harold Kennedy		10,077,148	10,077,148
A. McCall		1,213,956	1,213,956
Watson & Todd	28,659,623		28,659,623
R. Cox & Co.	20,578,119		20,578,119
E. H. Lemay	5,700,659		5,700,659
E. M. Nicholson	2,492,797		2,492,797
Graddon & Owens	2,424,393		2,424,393
Cox, Long & Co.	2,310,541		2,310,541
Charlemagne & Lac Ouareau Lumber Co., Ltd.	909,680		909,680
Railways, steamships and sundry shippers	12,626,483		12,626,483
Totals, 1908	108,606,459	105,867,292	214,473,751
Shipments, season 1907	115,246,324	147,407,748	262,654,072
Total decrease, 1908	6,639,865	41,540,456	48,180,321

Canadian exports via ports outside the St. Lawrence are not included in the above, and complete returns of spruce shipments from ports below Quebec are not obtainable.

Number of steamers cleared from the port of Quebec lumber laden for the past five years:

Total steamers cleared 1904—1908	165 strs.,	506,702 tons,	for part and entire cargoes.
" " 1905—1907	177 "	535,215 "	" " "
" " 1906—1908	198 "	669,779 "	" " "
" " 1907—1908	170 "	578,604 "	" " "
" " 1908—1909	165 "	595,878 "	" " "

Number of cars of deals, timber, pulpwood, etc., carried by the Quebec & Lake St. John Railway for the year ending Nov. 1st, 1908:

Deals and lumber.....	3,502 cars	Ties	175 cars
Cordwood.....	2,101 cars	Square timber	156 cars
Pulp.....	572 cars	Pulp wood	2,828 cars

Number and tonnage of sea-going vessels entered in the port of Montreal for the past five years:

Years	Ships	Tonnage
1904	796	1,856,697
1905	833	1,940,056
1906	820	1,973,223
1907	742	1,925,986
1908	739	1,958,604

Quebec's Average Trade for Five Years.

Statistics showing the average supply, export and stock for five-year periods from 1899 to date afford some interesting comparisons. They show that the supply and the export fell off regularly for all classes of wood. The average stock for the five-year period from 1904 to 1908 increased as compared with the previous five years, for the following classes: Oak, birch, waney white pine and spruce. For all others it decreased. The table is as follows:

Articles	Average of 5 years' supply		Average of 5 years' export		Average of 5 years' stock	
Timber—cu. ft.	1899-03	1904-08	1899-03	1904-08	1899-03	1904-08
Oak	634,905	428,144	680,577	433,904	348,364	410,710
Elm	637,689	335,436	570,154	355,707	353,889	322,264
Ash	84,464	13,576	74,145	18,713	25,486	7,817
Birch	288,456	178,892	290,635	179,551	5,657	6,262
White pine—						
Square	510,475	144,619			670,245	167,220
Waney	1,688,095	1,272,942	2,557,086	1,447,299	509,852	670,235
Red pine	88,430	13,024	123,779	22,495	85,253	21,910
Deals—Quebec standard						
Pine	224,069	26,746	226,148	26,316	21,353	7,648
Spruce	5,474,639	3,207,078	5,603,668	3,199,985	327,803	486,435

White Pine.—The stock of waney pine, though light, is somewhat over that of last year, while that of square pine is smaller than any previous record. The supply of both these woods seems certain to show a further falling off for the coming season.

	Supply.	Export.	Stock.
1908—Square	132,560	1,098,779	50,776
Waney	1,060,880		372,681
1907—Square	136,200	1,311,252	67,666
Waney	1,159,960		267,913

Red Pine.—The manufacture and export of this wood have fallen to figures that indicate an early termination of the business in it.

	Supply.	Export.	Stock.
1908	8,200	9,022	4,591
1907	8,400	20,853	7,687

Oak.—The supply has fallen short of what at one time seemed probable, and the production for next season will be greatly restricted. The light export has left a heavier stock than the extremely small one of last year, but not at all too heavy, if a moderate recovery in the amount shipped takes place.

	Supply.	Export.	Stock.
1908	596,160	317,453	395,720
1907	444,160	598,143	167,509

Elm.—Reduced stocks in Canada and in the leading markets of the United Kingdom, coupled with an estimated supply that will certainly be under the very small one of the past season, indicate that at last consumption has overtaken production in this wood. There is every probability of the stock being reduced to a minimum before the close of the coming season.

	Supply.	Export.	Stock.
1908	87,640	193,781	193,730
1907	239,860	311,462	330,187

Ash.—The trade in this wood, formerly a large one, seems drawing to an end. The wood can no longer be supplied in any quantity, and appears not to be wanted.

	Supply.	Export.	Stock.
1908	8,040	7,671	3,965
1907	25,880	24,425	3,048

Birch.—The competition of cheap African mahogany, and the increased shipment of sawn birch, have seriously restricted the demand for this timber in the hewn log. Producers would be wise to avoid making more than they can readily dispose of.

	Supply.	Export.	Stock.
1908	150,920	145,285	4,190
1907	99,942	124,252

Spruce Deals.—The value of spruce deals in the markets of the United Kingdom has been seriously affected by the competition of Baltic goods, especially of Riga white deals, all through the past year. This, together with dull general business, depressed prices to a very low level. Recently there has been a marked recovery from the lowest point reached, and prospects have decidedly improved.

	Supply.	Export.	Stock.
1908	2,217,134	2,469,722	249,890
1907	3,140,882	2,942,392	502,478

Pine Deals.—The export business in pine deals is no longer a Quebec one. The produce of the Ottawa mills is shipped from Montreal. There seems some probability of more pine deals being cut for export during next season than of recent years, but only if the export demand justifies it.

	Supply.	Export.	Stock.
1908	5,900	6,583	3,600
1907	2,409	1,932	6,223

Sawn Lumber.—The year has been a trying one for both Ottawa and Western millowners. Though the season commenced with no accumulation of stocks it was marked with absence of demand and continued dullness in the markets of the United States and the United Kingdom. Recently there has been an active demand at improved prices for the upper grades, but the medium qualities continue depressed and box and cull lumber appears difficult to sell even at considerable concessions.

Freights.—Pine deal and timber freights ruled low during the season, at one time falling to extremely low figures. Quebec timber rates for hardwood and pine alike fell to 50s. for Manchester, an unprecedented rate. For Greenock and Liverpool 55s. to 57s. 6d. was booked. From Montreal, Glasgow and Liverpool ruled at 30s. for deals, and 35s. was general current rate for London, all with 5s. additional for sidings.

THE MARITIME PROVINCES

The improvement in the markets upon which New Brunswick and Nova Scotia depend for the sale of their lumber, which was confidently expected during the early part of 1908, did not materialize. The cut for the previous winter was larger than had been estimated and the stocks on hand were already large. On account of the stringency in money, many dealers in the Baltic and elsewhere were obliged to sell at a sacrifice, so that the European markets were flooded with cheap lumber, at a time when the demand for lumber was at a minimum. Stocks abroad, however, are now lowered. This winter's cut will be even smaller than last winter's, and it is expected that spruce may to some extent be made into boards for other markets, instead of into deals. A decided improvement in prices and volume of trade is already evident according to recent cable advices.

The most important factor in the New Brunswick lumber trade during 1908 was the manufacture of spruce deals. It was characterized by

continued dullness. The year opened with the markets of Great Britain at a low ebb so far as demand was concerned, and little encouragement in sight. Dullness continued with uniformity all through the year in the English markets and prices failed to approach those of 1907. During the autumn months the demand for deals in Great Britain revived and prices advanced. The cedar shingle business provided the most remarkable phase of the year's trade. Values remained at extremely high prices for months. During the hot months, however, the demand fell off and prices declined. In the early fall a rally occurred and prices returned to the figures which had prevailed in the spring. The spruce lath trade throughout the first eight months of the year was very dull, but improvement set in in the autumn and prices stiffened in a gratifying manner. Spruce deal for the New York market had a very poor year, although a change for the better occurred about the middle of the autumn.

In Nova Scotia the lumber trade for the past year was not conducted with satisfactory results. The financial stringency which commenced with the autumn of 1907 caused a serious drag upon the lumber business. The depression which spread throughout the commercial world resulted in a curtailment of labor in the United States which had a marked effect upon the South American market. As American purchases of South American products were largely reduced, the South American demand for lumber fell off heavily. In previous years the export of lumber from Nova Scotia to South America was carried on at a profit, but during 1906 it was practically impossible to sell anything in that market. In Great Britain profits were practically wiped out by competition. Shipments, however, were fairly well maintained and stocks are now probably less than at this time last year. Freight rates to American ports and for trans-atlantic business were on a satisfactory basis for the shippers, but the carriers claim to have lost money.

There was a fairly good demand for Cuba and South American stock at the beginning of 1908 but exporters were not in a position to accept large orders. One prominent firm's shipment in 1907 was 34,000,000 feet and in 1908 23,500,000. Of this 15,000,000 were shipped to the United States. Other firms, however, were active shippers throughout the year and the total exceeded the previous year's exports.

The cost of production for the year was higher, on account of the increased cost of supplies. Labor was plentiful because of limited operations. The demand for lumber commenced to improve about September, and there was a ready demand from that time on, with better prices. This was especially the case with hemlock shipped to the United States. The season of 1909 is looked upon as promising much better business.

A prominent lumber producer in Nova Scotia states that the production in the province was not more than one-half the usual quantity. White pine for the English market was the best seller, but it is feared that during 1909 the price may be lower because a great quantity of territory which was burnt over must be logged. Hemlock was the worst seller and spruce afforded only a small margin. The United States was the worst market during the year. In Great Britain spruce was purchased in much smaller quantities than usual. The same producer in summing up states that there are heavy stocks on hand on the Ottawa and in New Brunswick. In Great Britain there is about an average stock and in the United States the same.

The result of the unsatisfactory trade of 1908 is that nearly all operators in New Brunswick and Nova Scotia have decided to reduce their cut during 1909 by at least 40 per cent. This will mean a curtailment in the Nova Scotia cut of about 100,000,000. There will be about 40,000,000 less carried over from the shipping season of 1908, so that during 1909 there will be available for export only about one-half the quantity annually shipped during recent years.

The shipments from New Brunswick by ports during 1907 and 1908, excluding Shediac, were as follows:

Port	1907—Sup. ft.	1908—Sup. ft.
St. John	207,054,632	135,508,971
Campbellton	17,592,977	35,583,102
Dalhousie	17,500,000	15,000,000
Bathurst	10,787,900	10,087,319
Chatham	35,931,982	50,698,668
Newcastle	36,436,115	24,917,440
Richibucto	1,623,549	2,455,120
Buctouche	1,254,750	463,288
Outports of Sackville	3,722,652	11,683,896
Hopewell Cape	19,072,568	7,224,504
Harvey	3,688,082	10,728,448
Total shipments	354,665,207	304,351,756

According to this statement it will be seen that there was a large increase in the shipments from several north shore ports, notably Campbellton and Chatham.

The exports of lumber from New Brunswick for the past four years were as follows:

Year	No. of Vessels	Tons	Deals, etc. Sup. feet.
1905	370	644,823	343,494,502
1906	379	754,274	420,182,246
1907	312	722,157	355,053,363
1908	292	718,726	304,351,756

Value of shipments from New Brunswick to United States ports during March, June, September and December quarters, 1907 and 1908:

Grand total				1907	1908
				\$352,305.83	\$286,962.93

	1907	1908
Canadian declared lumber exports, grand total	\$1,428,969.26	\$1,048,433.68
American declared lumber exports, grand totals	766,495.25	624,582.34

The year 1908 was a very unsatisfactory one from the standpoint of the lumber trade between New Brunswick and transatlantic ports. This is accounted for largely by the general dulness in business. The shipments were much less than in 1907 and far below those of 1906. In its wood exports during the year 1908 St. John showed a very heavy decrease, the figures being as follows:

Year	No. of Vessels	Tons	Deals, etc., Sup. ft.
1907	188	592,770	207,054,632
1908	166	567,770	135,508,971

The shippers from the port of St. John were as follows:

	1905	1906	1907	1908
	sq. ft.	sq. ft.	sq. ft.	sq. ft.
J. E. Moore & Co., Ltd.	44,640,316	71,827,340	70,294,047	43,727,541
W. M. Mackay	45,223,887	57,215,918	75,017,207	40,060,416
A. Gibson Ry. Mfg. Co.	28,121,386	33,508,352	29,915,822	25,173,212
G. McKean	21,653,228	20,118,116	24,822,944	15,970,059
Others shippers	22,111,142	7,909,759	7,004,612	10,677,743
Totals	161,749,959	191,579,485	207,054,632	135,508,971

It will thus be seen that the export for last year represents a very considerable shrinkage. From all accounts the figures for the coming season may be expected to reveal a still further shrinkage, more particularly since the pronounced revival of business activity in the United States.

TRADE WITH GREAT BRITAIN

The demand for sawn and planed wood in the United Kingdom showed a remarkable reduction during the year and was by far the smallest recorded for twelve years past. The exports from Canada fell off about 40,000 standards. This was all the more remarkable as it followed a reduction of about 80,000 standards in the previous year. The exports to Bristol Channel ports were about the same as during 1907.

Exports of Canadian timber to London during 1908 were on a very modest scale, but they served to satisfy the very limited demand. Waney pine suffered on account of the contraction in the shipbuilding and textile machinery industries. Oak was very dear at Quebec and shippers were unable to place many orders at the advanced prices. On the whole the London market was quiet throughout 1908, though prices held firm at old rates. Spruce was generally firm and permitted a small profit to merchants and yard keepers. Oregon pine met with less demand during the year on account of the general trade depression. The revival in the American demand, however, made prices advance during the closing months of the year and strengthened the values in London. Canadian pine deals again declined in the quantity of their export to London. This is ascribed largely to the strong demand from United States markets. The export of spruce deals to London also declined as a result of weak demand at the prevailing prices, rather than scarcity of supply. Canadian hardwoods did very little business in London.

The values of the exports of Canadian woods to the United Kingdom during 1906-7-8 were as follows:

	1908	1907	1906
Sawn and planed	\$14,488,340	\$16,662,025	\$20,941,930
Hewn	1,474,170	1,772,725	2,405,045

Exports of Canadian woods to London during 1906, 1907 and 1908 were as follows:

	Number of Pieces		
	1906	1907	1908
Pine deals, etc., from the St. Lawrence	898,000	801,000	521,000
Spruce deals, etc., from the St. Lawrence	1,967,000	1,081,000	815,000
Birch deals, etc., from the St. Lawrence	217,000	318,000	208,000
Spruce deals, etc., from New Brunswick, etc.	1,389,000	884,000	434,000
Birch deals, etc., from New Brunswick, etc.	255,000	219,000	198,000

Timber	Number of loads		
	1906	1907	1908
Yellow pine from Quebec	1,009	58	
Red pine		34	
Elm	1,336	1,075	1,162
Ash	75	252	210
Hickory			
Oak	213	8	
Birch	3,259	837	899
Birch, Nova Scotian, etc.	802	123	310

The figures of consumption at Glasgow show a drop of two million cubic feet as compared with 1906. Compared with 1905, the decrease is three million. Canadian birch has found a serious competitor during the year in Gaboon mahogany, on account of its cheapness. Canadian yellow pine has lost ground on account of the high prices asked. It is still, however, as popular as ever. Quebec ash met with less demand at Glasgow. Apart from the new warship orders there is not as yet anything to warrant expectation of immediate improvement in the general conditions of the trade.

The exports of wood goods direct to Clyde ports for 1908, 1907, 1906 and 1905 from Quebec, and lower ports and Maine, U.S.A., were as follows:

		From Quebec.						
		Logs.	Logs.	Logs.	Logs.	Logs.	Logs.	Pieces.
During 1908		1,789	556	...	1,895	1,374	370	2,671
During 1907		2,334	423	...	1,837	2,097	1,559	2,302
During 1906		2,541	...	188	1,938	5,165	641	5,911
During 1905		5,191	1,159	301	2,090	3,199	502	3,768

		From Lower Ports and Maine, U.S.A.		
		Logs.	Pieces.	Pieces.
During 1908		1,642	69,155	1,295,798
During 1907		546	204,715	1,786,176
During 1906		3,999	210,861	1,887,621
During 1905		3,593	119,482	1,043,630

At Glasgow the timber trade suffered, in common with all others, from the depression of the year 1908. The volume of business was greatly curtailed and prices dropped considerably in some directions. Buyers' wants were not extensive enough to induce them to lay in large stocks and their demand throughout 1908 was for immediate requirement only. At the opening of the season of 1909 there is nothing to indicate an increase of consumption. It is necessary, if confidence is to be restored, that imports should be only commensurate with the requirements of the market. The trade with Canada during 1908 was marked by a decrease in the consumption of log timber, resulting from small requirements of shipbuilders for waney and square white pine and elm. The consumption of pine deals and sidings was nearly equal to the import. The consumption of spruce exceeded the import. The values of Canadian timber, deals, etc., did not vary much, except that the lower grades of pine deals were slightly higher, and show signs of going higher still. The market has not even

yet recovered from the flood of United States consignments during the first part of 1908. On the basis of the business of 1908, it would be a difficult matter to forecast that for 1909. It may be noted, however, that as a result of careful attention to the market conditions, stocks on hand, with few exceptions, are now light. An improved demand would probably bring about increased prices. Improvement having set in throughout Canada and the United States, it is believed that it will result in restricted consignments until the demand improves and prices advance.

B. C. Lumber Companies Incorporated in 1908.

The following lumber companies were incorporated during the year 1908 under the laws of British Columbia, either as provincial concerns, with headquarters in the province, or as extra provincial companies, with headquarters elsewhere:

"Adams-Powell Timber Co., Ltd.," incorporated October 10, 1908. Capital, \$100,000. Shares, \$100 each. The office of this company is located at 441 Seymour street, Mr. Roland D. Craig being manager in charge. The company is at present exclusively a timber holding concern.

"Albernethy & Loughed, Ltd.," incorporated May 20, 1908. Capital, \$50,000. Shares, \$100 each. To carry on a business as lumber and shingle manufacturers. The office is located at Port Moody, B.C.

"Brooks-Seaton-O'Brien, Ltd.," incorporated November 10, 1908. Capital, \$500,000. Shares, \$100 each. To carry on a business as timber merchants and sawmill owners. The address of the company is Williams Block, Vancouver, Mr. H. D. Blackford being the manager in charge.

"Bell Lumber Co., Ltd.," incorporated December 1, 1908. Capital, \$100,000. Shares, \$1.00 each. To carry on a business as timber merchants, etc.

"Babine Timber Co., Ltd.," incorporated November 13, 1908. Registered as an extra provincial company. Capital, \$75,000. Shares, \$100 each. The head office of the company is in the city of Seattle, Wash. The head office for British Columbia is in Vancouver, B.C. Mr. W. H. D. Ladner is the manager in charge.

"British American Lumber Co., Ltd.," incorporated September 29, 1908. Capital, \$50,000. Shares, \$100 each. To carry on the business of saw-operators.

"Barnet & McDonald Lumber Co., Ltd.," incorporated May 18, 1908. Capital, \$300,000. Shares, \$100 each. This concern is operating a shingle mill at New Westminster, B.C., Mr. Hugh McDonald being manager in charge.

"The Cariboo Timber Co., Ltd.," incorporated September 10, 1908. Capital, \$300,000. Shares, \$100 each. Messrs. Mahon-McFarland-Mahon, real estate agents, Vancouver, and H. J. Duncan, barrister, of Vancouver, are interested in this concern.

"Central Lumber Co., Ltd.," incorporated September 21, 1908. Capital, \$150,000. Shares, \$1.00 each.

"The Chehalis Lumber Co., Ltd.," incorporated August 18, 1908. Capital, \$150,000. Shares, \$100 each.

"Capilano Timber Co., Ltd.," incorporated August 12, 1908. Capital, \$300,000. Shares, \$100 each.

"The Crown Lumber Co., Ltd.," incorporated July 8, 1908. Capital, \$150,000. Shares, \$100 each.

"Chase Lumber Co., Ltd.," incorporated January 17, 1908. Capital, \$10,000. Shares, \$100 each. Mr. W. H. Chase, 1154 9th avenue West, Vancouver, is head of this company.

"Duncans Lumber Co., Ltd.," incorporated September 14, 1908. Capital, \$25,000. Shares, \$100 each. To acquire the sawmill plant and timber interests of Hooper Bros., at Duncans, B.C.

"The Ellis Thompson Lumber Co., Ltd.," incorporated July 31, 1908. Capital, \$15,000. Shares, \$10 each. To carry on the business of lumbermen in British Columbia.

"The Emerson Lumber Co., Ltd.," incorporated July 27, 1908. Capital, \$500,000. Shares, \$100 each. The head office of this company is in the Fairfield Block, Vancouver, their mills being located at Port Moody and New Westminster.

"Eastern British Columbia Lumber Co., Ltd.," incorporated February 17, 1908. Capital, \$500,000. Shares, \$100 each. This company succeeded the North American Land & Lumber Company, Limited. The head office and plant of the company are located at Fernie, B.C.

"Federal Timber Co.," registered as an extra provincial company June 17, 1908. The head office of the company is at Indianapolis, Ind. The local office of the company is at 633 Hastings street, Vancouver, B.C., Henry W. Magoon being manager in charge.

"C. H. Gillis & Co., Ltd.," incorporated December 15, 1908. Capital, \$25,000. Shares, \$25 each, to take over the wholesale lumber business carried on by C. H. Gillis. Head office in the Fairfield Block, Vancouver, B.C.

"Glen Valley Logging Co., Ltd.," incorporated November 16, 1908. Capital, \$25,000. Shares, \$100 each.

"Globe Lumber Co., Ltd.," incorporated July 13, 1908. Capital, \$50,000. Shares, \$1.00 each. It is understood at the time of writing that this company has disbanded.

"The Jedway Lumber & Development Co., Ltd.," incorporated February 29, 1908. Capital, \$20,000. Shares, \$100 each.

"Heaps Timber Co., Ltd.," incorporated October 13, 1908. Capital, \$1,000,000. Shares, \$100 each. To carry on a timber and lumber business in British Columbia. The head office of the company is located at 541 Hastings street, Vancouver, John Heaps being manager in charge.

"Herron Timber Co., Ltd.," incorporated March 7, 1908. Capital, \$50,000. Shares, \$100 each. The office is located at 653 Granville street, Vancouver.

"The Independent Lumber Company, Ltd.," registered as an extra provincial company December 14, 1908. Capital, \$250,000. Shares, \$100 each. The head office of the company is in Regina, Sask. The British Columbia office is located at Ashcroft, Dennis Murphy of that place being attorney for the company.

"The Jordan River Lumber Co., of New York," registered as an extra provincial company on October 13, 1908. Capital, \$500,000. Shares, \$100 each. The head office of the company is in New York City, the local office being at Victoria, B.C. Mr. J. D. Lutz of that place is attorney for the company.

"John Murray Co., Ltd.," incorporated August 24, 1908. Capital, \$50,000. Shares, \$10 each; to carry on business as lumber manufacturers.

"The P. D. Hillis Logging Co., Ltd.," incorporated November 30, 1908. Capital, \$100,000. Shares, \$100 each. The head office of this company is in Victoria, B.C.

"The A. T. Kellihier Lumber Co., Ltd.," incorporated September 19, 1908. Capital, \$100,000. Shares, \$100 each. Mr. W. Hart-McHarg, solicitor, of Vancouver, is attorney for the company.

"The Kelowna Saw-Mill Co., Ltd.," incorporated June 19, 1908. Capital, \$100,000. Shares, \$100 each.

"Lost Lake Timber Co., Ltd.," incorporated February 1, 1908. Capital, \$30,000. Shares, \$1.00 each.

"McFaddon Logging Co., Ltd.," incorporated September 3, 1908. Capital, \$50,000. Shares, \$1.00 each. The office of this company is in the Victoria Chambers, corner of Homer and Pender street, Vancouver.

"Malcolm Lumber Co., Ltd.," incorporated April 16, 1908. Capital, \$500,000. Shares, \$10 each. It is understood at the time of writing that this company has disbanded.

"The Naas River Lumber Co., Ltd.," incorporated March 11, 1908. Capital, \$300,000. Shares, \$10 each.

"The Pugh & Livingstone Lumber Co., Ltd.," registered as an extra provincial company December 15, 1908. Capital, \$75,000. Shares, \$100 each. The head office is at Okotoks. The provincial office is at Elkmouth, B.C., Wm. Stewart Herron of that place being attorney for the company.

"Port Neville Timber Co., Ltd.," incorporated September 26, 1908. Capital, \$150,000. Shares, \$100 each.

"Okanagan Timber & Land Co., Ltd.," incorporated August 29, 1908. Capital, \$25,000. Shares, \$100 each. Incorporated to take over the business of Morgan & Jackson, Armstrong, B.C., to carry on business of saw proprietors, etc.

"Patterson-Eckert Lumber Co., Ltd.," incorporated March 26, 1908. Capital, \$20,000. Shares, \$100 each. Incorporated to acquire the mill and lumber business at Chilliwack, B.C., carried on by Messrs. Eugene Patterson, Henry Eckert, Jas. H. H. Nelson and Chauncy Erwin Eckert.

"Procter Lumber Co., Ltd.," incorporated January 20, 1908. Capital, \$250,000. Shares, \$1.00 each. Plant located at Procter, B.C.

"The Robinson & Lique Lumber Co., Ltd.," incorporated November 27, 1908. Capital, \$15,000. Shares, \$1.00 each.

"Quamichan Mill Co., Ltd.," incorporated November 30, 1908. Capital, \$20,000. Shares, \$1.00 each. Plant located at Cowichan, B.C.

"Rock Creek Lumber Co., Ltd.," incorporated January 11, 1908. Capital, \$50,000. Shares, \$10 each. Mr. Simon Taylor, Cranbrook, B.C., is interested in this company.

"The Skeena Lumber Co., Ltd.," incorporated August 22, 1908. Capital, \$75,000. Shares, \$100 each.

"Star Lumber Co., Ltd.," incorporated September 21, 1908. Capital, \$75,000. Shares, \$1.00 each.

"Seymour River Lumber Company, Limited," incorporated March 30, 1908. Capital, \$500,000. Shares, \$100 each.

"The Sunset Mills, Ltd.," incorporated April 27, 1908. Capital, \$250,000. Shares, \$1.00 each. Mr. N. Wolverton, of Nelson, B.C., is interested in this company.

"The Sanderson Moore Lumber Co., Ltd.," incorporated April 18, 1908. Capital, \$100,000. Shares, \$50 each.

"The Tidewater Timber Co., Ltd.," incorporated October 29, 1908. Capital, \$100,000. Shares, \$100 each.

"Trail Lumber Co., Ltd.," incorporated July 20, 1908. Capital, \$60,000. Shares, \$10 each. Head office of this plant is at Paulson, B.C. Mr. W. Mark DeCrew, manager in charge.

"Vancouver Cruising Co., Ltd.," incorporated November 2, 1908. Capital, \$20,000. Shares, \$1.00 each. To carry on a business of manufacturing lumber, shingles and wood products.

"Vermillion Tie & Timber Co., Ltd.," incorporated October 15, 1908. Capital, \$50,000. Shares, \$50 each. W. Hart-McHarg, Vancouver, B.C., is solicitor for this company.

"The Valdes Lumber Co., Ltd.," incorporated March 2, 1908. Capital, \$75,000. Shares, \$10 each.

"West Pacific Shingle & Lumber Co., Ltd.," incorporated December 16, 1908. Capital, \$50,000. Shares, \$100 each. Office of the company is in the Empire Building, Vancouver, Mr. R. H. McKee being the manager.

"The Yellow Head Pass Lumber Co., Ltd.," incorporated May 15, 1908. Capital, \$250,000. Shares, \$100 each.

Recent British Columbia Lumber Incorporations.

The following new lumber companies have been incorporated under the laws of British Columbia during the past month:

West Pacific Shingle & Lumber Company, Limited, capitalized at \$500,000; shares, \$100 each. The head office of this company is located in the Empire Building, Hastings street, Vancouver, B.C. Mr. R. H. McKee, manager for the company.

The Independent Lumber Company, Limited, capitalized at \$250,000; shares, \$100 each. This company has its head office at Regina, Sask., and is registered as an extra-provincial company in British Columbia. The head office in this province is located at Ashcroft. Dennis Murphy, barrister, Ashcroft, B.C., is attorney for the company.

The Pugh & Livingstone Lumber Company, capitalized at \$75,000; shares, \$100 each. The head office of this company is located at Okotoks, Alta. The concern registering as an extra-provincial company, under the laws of British Columbia, the head office in this province being located at Elkmouth, B.C. Wm. Stewart Herron, Elkmouth, B.C., is attorney for the company.

The Western Canada Wood, Pulp & Paper Company, Limited, is also incorporated under the laws of British Columbia, with a capital of \$1,500,000; shares, \$1 each. Mr. Greely Koltz, of Vancouver, B.C., is interested in this company.

Canadians Inspect the Long-Bell Properties.

A party of Canadians recently visited the sawmill plants and timber lands of the Long-Bell Lumber Company at Kansas City and at Woodworth, Yellow Pine, Longville, DeRidder, Bon-Ami, and Lake Charles, Louisiana. The party was organized by Mr. N. L. C. Mather, of the Dominion Securities Corporation, Toronto, and was accompanied by members of the Long-Bell Lumber Company and of Clark L. Poole & Company, bankers and timber land brokers, Chicago. The party included the following: Robert Gill, manager Bank of Commerce, Ottawa, Ont.; Henry K. Egan, managing director Hawkesbury Lumber Company, Ottawa, Ont.; F. W. Avery, Hull Lumber Company, Ottawa, Ont.; F. W. Powell, Rideau Lumber Company, Ottawa, Ont.; Robert A. Hurdman, lumberman, Ottawa, Ont.; John C. Browne, Fraser & Company, lumberman, Ottawa, Ont.; Hon. W. A. Charlton, lumberman and dealer in timber lands, Toronto, Ont.; N. L. C. Mather, Dominion Securities Corporation, Toronto, Ont.; J. A. McLaughlin, Clarke L. Poole & Company, Detroit, Mich.; Charles L. Crawford, timber cruiser, Boston, Mass.; C. B. Sweet, vice-president Long-Bell Lumber Company, Kansas City, Mo.; F. J. Bannister, secretary-treasurer Long-Bell Lumber Company, Kansas City, Mo.; J. F. Burnham, jr., Long-Bell Lumber Company, Kansas City, Mo. So distinguished a party of Canadian lumbermen never before visited the timber sections of the south. All the visitors were enthusiastic over what they saw and brought home interesting stories of the lumbering operations.

While inspecting the timber at Bon-Ami Mr. W. F. Ryder and Mr. W. A. Charlton made a practical investigation to establish the minimum of fire risk in the pine districts of that section. A fire was set out in the heavy timber to be photographed for the purpose of showing the difference between the fire risk in the southern United States and in the Dominion

Canadian Lumbermen in the Sunny South.

of Canada. At this operation the party saw the felling of the trees and the skidding and loading on cars.

The Dominion Securities Corporation received a number of enthusiastic opinions from those who took the trip. They expressed themselves as greatly impressed by the properties and one of the members presented an exhaustive report upon them. The Dominion Securities Corporation have now completed arrangements for handling the Long-Bell Lumber Company's 6 per cent. first and refunding mortgage gold bonds in Canada and are arranging to place them on the Canadian market.

"Lumber Insurance" Stockholders' Annual Meeting.

The annual meetings of stockholders and directors of the Lumber Insurance Company of New York and the Adirondack Fire Insurance Company were held at the office of the companies February 3rd. Directors for the succeeding year were elected as follows:

Lumber Insurance Company of New York: R. K. Albright, G. A. Mitchell, Guy White, North Tonawanda, N.Y.; B. W. Arnold, Albany, N.Y.; S. M. Clement, W. H. Gratwick, William Hamlin, John D. Larkin and Robert W. Pomeroy, Buffalo, N.Y.; Silas M. Johnson, Spuyten Duyvil, N.Y.; John Jay McKelvey and R. S. McKelvey, New York; F. W. Mattocks, Closter, N.J.; John Mitchell, Cleveland, Ohio; Guy H. Moulthrop, Bay City, Mich.; Clark L. Ring, Saginaw, Mich.; Dwight J. Turner, Toronto, Ont.

Adirondack Fire Insurance Company: R. K. Albright, G. A. Mitchell and Guy White, North Tonawanda, N.Y.; S. M. Clement, F. C. Gratwick, W. H. Gratwick, William Hamlin, John D. Larkin and Robert W. Pomeroy, Buffalo, N.Y.; William G. Frost, E. A. Lightner, John Jay McKelvey and R. H. McKelvey, New York; Elias M. Johnson, Spuyten Duyvil, N.Y.; F. W. Mattocks, Closter, N.J.; John Mitchell, Cleveland, Ohio; Guy H. Moulthrop, Bay City, Mich.

The executive committee and officers of the companies were continued as heretofore. The executive committee consists of Messrs. W. H. Gratwick, J. J. McKelvey, G. A. Mitchell and Guy White, the officers of both companies being: G. A. Mitchell, president; W. H. Gratwick, vice-president; Guy White, treasurer; R. H. McKelvey, secretary.

The directors reviewed the progress of the companies in the preceding year. The fact was brought out that it requires the services of twenty road men to do the necessary travelling and inspecting of risks throughout the field, and that the managers of the companies, the Lumber Insurers General Agency, are now maintaining branch offices, with one or two men stationed at each, at Atlanta, Philadelphia, Boston, Halifax, Ottawa, Ohio, Minneapolis, Winnipeg, and Portland, Oregon. Among the active representatives present at the meetings was Mr. E. D. Hardy, of Ottawa, manager of the Canadian office of the Lumber Insurance Company.

Taking a Well-Earned Rest.

Mr. Thos. P. Egan, head of the firm of Fay & Egan, woodworking machinery manufacturers, Cincinnati, Ohio, was paid a high compliment a few days ago by the business men of Cincinnati. Mr. Egan has just completed his term of office as president of the Cincinnati Chamber of Commerce. His administration of the Chamber's affairs was the most successful in its history. He infused into the organization the same enthusiasm and ambition which made his own firm famous. A unanimous offer of the office for another term was made to Mr. Egan but he was compelled, on account of a proposed trip to Europe, to decline the honor and there was universal disappointment at his withdrawal. Mr. Egan, together with his wife and daughter, are now enjoying a four months' tour

T. P. Egan, Head of Fay & Egan, Cincinnati, Ohio.

in Europe. Mr. Egan, whose portrait is published herewith, was born in Ireland in 1847. He was brought, as a child, to Hamilton, Ont., and as a boy worked in dry goods houses in Hamilton and Detroit for a salary of \$2 a week. He was educated at Hamilton and went to Cincinnati at the age of 15 and entered the employ of Steptoe, McFarlan & Company. After two years he started business for himself with two partners. Mr. Egan was the organizer and first president of the National Association of Manufacturers.

Two Unique Calendars.

The Lumber Insurers' General Agency, 84 William street, New York, have favored the "Canada Lumberman" with a copy of their attractive calendar for 1909 and 1910. The calendar consists of a large piece of bristol board with a reproduction in colors of a disastrous fire which occurred in the yards of the Sawyer-Goodman Company, Marinette, Wis., on August 1st, 1908. The picture is a splendid one and affords a graphic illustration of the importance of carrying lumber insurance with good companies.

W. F. Hunting's calendar is very appropriate to their business, the body of the calendar consisting of a 12-inch wide straight grain, clear cedar shingle and a medallion hanger having on it the following words: "Cheer up, the worst is over Order your shingles from W. F. Hunting Lumber Company." Further down on the calendar Messrs. Hunting claim that their shingle output has no limit.

Freight on Shingles to Be Increased.

A Vancouver despatch announces an intended advance of the C. P. R. freight rate on shingles to Western Ontario, from 72½ and 75 cents to 77 cents, to become effective in about thirty days.

U. S. Buyers After B.C. Shingles.

A number of lumber buyers from the American side have been in Vancouver recently purchasing for the United States market the higher grades of lumber and shingles. It is estimated that American buyers recently in Vancouver placed orders with local mills for approximately 10,000,000 feet of high grade fir and cedar, the demand for the latter being especially heavy. In some instances mills were forced to refuse orders, as it was beyond the capacity of their plants for delivery in the near future. Practically all orders were placed for delivery as soon as the lumber can be manufactured. The prices obtained are all based on the American list. The demand for British Columbia shingles on the American side at present is good, and the market now possesses an upward tendency. Seventy-five per cent. of the shingles cut in British Columbia are sold in the United States.

Hoo-Hoo House at Seattle Fair.

The lumbermen and those interested in the lumber industry are to be well provided for at the Alaska Yukon Pacific Exposition, which takes place at Seattle this coming summer, commencing in June. Not only will a magnificent forestry building similar to the one built at the Portland Fair, but on a larger scale, be a part of the Exposition, but the Hoo-Hoo Order are going to have their own building at the fair, this similar to the "House of Hoo-Hoo" at the St. Louis Fair of 1904.

This building will be the headquarters of the order at and during the fair, which is to be called the "Hoo-Hoo House," and will be a club as well as a haven of rest for the lumbermen, railway traffic officials, saw mill machinery and supply men and lumber trade newspaper men visiting the fair.

A special feature of the Hoo-Hoo House will be the ladies' reception and retiring room, in charge of maids. In this way the wives and

"Hoo-Hoo House" at the Alaska Yukon Pacific Exposition.

daughters of members can rest and be entirely secluded. It frequently happens that a man and his wife are interested in different exhibits at an exposition and this can be their meeting place.

Plans have been prepared for the building along the lines of a bungalow, with a wide porch all along one side and parts of two other sides. The site secured is on the grounds near the forestry building and provides a magnificent view of Lake Washington and the Cascade Mountains in the distance. While it is proposed to have a building every bit as comfortable and attractive as the St. Louis building, it is not the intention to put up so expensive a structure. The funds for the building will be raised by disposing of memberships in the Hoo-Hoo House, which will cover the entire liability of a member, as there are no dues. It is not essential that subscribers to membership in Hoo-Hoo House be members of the Concatenated Order of Hoo-Hoo in order to join the club, but it is necessary that all subscribers be eligible by virtue of their occupation or calling to membership in the Hoo-Hoo order. This will mean that all members of the Hoo-Hoo House will be lumbermen, railway traffic officials, lumber newspaper men and saw mill supply men. It is expected that some members will take out more than one membership and the privilege will be given to transfer the surplus memberships to other people, providing, however, that these other people are eligible for membership in connection with the House of Hoo-Hoo at the St. Louis Exposition. The Hoo-Hoo House has not only the approval but the strong endorsement and earnest support of the Supreme Nine, and the Western Lumberman takes this opportunity of expressing its hearty recommendation of the scheme, believing that all of its readers visiting the fair next summer will find a hearty welcome at the Hoo-Hoo headquarters. All remittances to this scheme should be made payable to the Treasurer, Wm. Irving Ewart, Alaska Building, Seattle, while the Secretary, Mr. Fred H. Gilman, 1008 White Building, Seattle, will be pleased to furnish further information upon request.

British Columbia Market.

Vancouver, B.C., Feb. 8.—There is a good demand for high grades of uppers and it is difficult to find enough stock to supply the local and prairie markets. There is also a fair demand for "common," though there are still large stocks on hand in the prairies. The general opinion, however, is that there will be a good demand for all grades in the Northwest in the near future. It is not expected that there will be much of an advance in rough lumber in the Kootenays as there is a large stock of "common" on hand and in the retail yards. Fir logs have advanced again and are now selling at \$9 to \$10, which is almost as high as the price which prevailed before the drop. At the present market price for lumber, and with logs selling at \$9 to \$10, lumber cannot be manufactured and sold at much above cost. The profit, therefore, must be made on "uppers" if it is to be made at all. The recent advance of \$2 on "common" lumber in Vancouver has improved matters a little. At the former prices the only sales that could be made were for the job lots which mill owners were tired of seeing piled in their yards. Cedar logs continue much cheaper since the embargo was replaced.

The market for shingles has improved and prices have advanced as a result of the increased demand from the United States. The basic price for some time was \$1.60, but few are now being sold at less than \$1.75 and it is believed that the price will go still higher.

Annual Meeting of Mountain Lumbermen.

The annual meeting of the Mountain Lumbermen's Association was held at Nelson, B.C., on January 29 and 30, and closed with a banquet tendered by the Nelson Board of Trade. Nothing definite was announced as to a change of prices, but a committee was appointed to go over the price list. Another committee was appointed to act in conjunction with the Coast Association, and to back up the stand taken.

FIRST FLOOR PLAN

by the Vancouver lumbermen. The officers elected were: President, Otto Lachmund, Arrowhead; vice-president, Otis Staples, Wycliffe; secretary-treasurer, W. A. Anstie, of Nelson, B.C.

A prolonged discussion took place on the market conditions, and details were referred to a special committee. There was a very large attendance, including representatives from the coast and territories. Revelstoke was represented by Mayor C. F. Lindmark and F. W. Hess, of the Revelstoke Sawmill Company, and F. E. Sine, of the Bowman Lumber Company, and H. G. Happins and O. Lachmund, of the Arrow Lake Lumber Company, from Arrowhead.

Offshore Lumber Freight Rates are Bearish in British Columbia.

A Victoria, B.C., report says that offshore lumber rates are inclined to be bearish, the last week showing a reduction from the freights which have been in force for some time. The weekly freight circular of the Shipowners' Association of the Pacific coast gives notice that the rate from Gray's Harbor, Willapa Harbor, Columbia River and Puget Sound is now 42s. 6d. to Valparaiso, for orders, 2s. 6d. less, direct. The previous quotation was 45 shillings. The present rate from the North Pacific to Callao is 40 shillings, which is a drop of 2s. 6d. Freights to Australia and steamer rates to Japan and North China remain the same. Present quotations are 30 shillings to Sydney, Port Pirie, Shanghai and North China; 32s. 6d. to Hong Kong, Melbourne and Adelaide; 37s. 6d. to Fremantle and Geraldton. The circular for some time has not quoted rates to the Hawaiian Islands and Gulf of California ports, as all recent charters to these ports have been made at private terms. The prevailing rate to South Africa remains at 50 shillings. Coastwise freights remain firm and steady and a moderate amount of business is being done. No change is noted but recent fixtures are at association figures.

WE OFFER

6% Timber Bonds

First and Refunding Mortgage Gold Bonds

of

The Long Bell Lumber Company of Kansas City, Mo.

(Capital and Surplus, \$15,632,203)

Bonds dated 1st May, 1907. Due serially on 1st May and November from 1913 to 1922, inclusive. In denominations of \$1,000 each. Interest payable 1st May and November at the Central Trust Company of Illinois, Chicago, and the Canadian Bank of Commerce, Toronto. Bonds may be registered.

Trustee: GENERAL TRUST COMPANY OF ILLINOIS, CHICAGO

The Bonds are secured by about 375,000 acres of Long and Short Leaf Yellow Pine Timber Lands, OWNED IN FEE SIMPLE, located in Louisiana and Texas, containing over FOUR BILLION FIVE HUNDRED MILLION (4,500,000,000) feet, log scale, of merchantable pine timber and seven large lumber manufacturing plants (including at each plant, saw mill, planing mill, brick dry kilns, machine shop, water works and electric light plants, logging equipment, houses and other buildings necessary for a modern plant) with a daily capacity of one million (1,000,000) feet per day.

The net earnings (profits) of the Long Bell Lumber Company for the year ending January 1, 1907, (after crediting stumpage account and charging profit and loss account \$4.00 per thousand feet), were \$2,330,488.25, over two and one-half times the largest annual payment of principal and interest. The average net earnings (profits) of the Long Bell Lumber Company for the past three years were \$1,629,679.03, over three times the interest charge on this bond issue.

The total assets of the Long Bell Lumber Company, according to official statement, exceed \$25,000,000; it possesses the highest credit and has successfully conducted a large lumber business for over thirty years under the same management.

Timber located in the Southern States has never been destroyed by fire. This statement will be verified by lumbermen and other persons familiar with Southern Timber. Any serious damage by fire is practically impossible because of the absence of undergrowth and the height of the trees. This is one of the most important facts in connection with this security.

FIRM MANUFACTURING SAW AND LATH Mill Machinery wants to secure a first-class travelling salesman, who fully understands both how to use and sell such machinery. Address Box 682 CANADA LUMBERMAN, Toronto.

Wanted

FOUR STRICTLY HIGH CLASS SHINGLE sawyers for Dunbar machines. Steady work the year around. Mill heated during winter. Commence in May. NEPISIGUIT LUMBER CO. LTD., Springfield, Mass.

Wanted

FIRST CLASS ACCOUNTANT, CAPABLE of taking charge of large lumber manufacturing office. One thoroughly conversant with cost systems preferred. Address drawer "D" Cranbrook, P.C.

Wanted

BY WHOLESALE LUMBER YARD TORONTO, a smart young man who has a knowledge of hardwood culling. Salary \$2.00 per day, steady employment with excellent chance for advancement. Box 683 CANADA LUMBERMAN, Toronto.

BUSINESS OPPORTUNITIES

CAPABLE ACCOUNTANT AND OFFICE Manager of twelve years thorough and detailed experience in wholesale and manufacturing lumber business, wishes to buy working interest in saw mill operation where his services can be used. Prefer B.C. Box 682 CANADA LUMBERMAN, Toronto.

MISCELLANEOUS**Wanted**

PINE LIMITS IN GEORGIAN BAY DISTRICT. Address Box 684 CANADA LUMBERMAN, Toronto.

WE ARE IN THE MARKET FOR CROWN GRANT Timber Limits. Must be well located and good timber. Either British Columbia or Pacific Coast. JOHN C. SPRY, Dealer in Timber Lands, 1230 Corn Exchange Bank Building, Chicago, Ill.

For Sale

PLANING MILL AND RETAIL LUMBER Business in best locality in Ontario. Everything complete and a bargain. Apply 681, CANADA LUMBERMAN, Toronto.

Wanted

TO PURCHASE A BAND SAW MILL capacity 30,000 feet per day or would let contract to saw pile and ship saw from three to five million feet lumber per season for a term of years. We have good mill site near town of Pembroke. Address Box No. 9, Westneath, Ont.

For Sale

THE PROPERTY OF THE J. E. MURPHY Lumber Company, situated on St. Joseph's Island, Lake Huron, comprising Saw Mill and Shingle Mill, Store, Dwelling Houses and Stables, all at Mildred Haven; also Shingle Mill, and Saw Mill at Mud Lake, and House and Barn; together with stock of saw logs at both places, and timber limits in the vicinity. Apply to C. S. SCOTT, Liquidator, Spectator Building, Hamilton, Ont.

For Sale

OVER 1000 ACRES OF TIMBER LAND, with about 100 acres of clearing on all lots, and some buildings, and lots of cedar, hemlock, birch, maple, oak, pine, and other merchantable timber, including a good mill site on Thessalon river close to a railway with good shipping facilities. Lots all patented and most cover the mining rights. Splendid chance to move a good saw mill, as other timber can be had also. Price only \$3,000. Apply to P.O. Box 100 Bruce Mines, Ont.

Timber and Pulpwood Limit For Sale

THE UNDERSIGNED HAVE FOR SALE a Timber and Pulpwood Limit having an area of 150 square miles, situate on the Coulonge River in the Province of Quebec. This is a very desirable limit and contains large quantities of Spruce pulpwood and Pine. For price and terms apply to THE EAST TEMPLETON LUMBER COMPANY, LIMITED, East Templeton, Que. Canada.

Saw Mill and Billion and a Half Feet Timber Limits For Sale

TO CLOSE AN ESTATE A COMPLETE sawmill plant and timber limits are offered for sale. Situated on Pacific Coast, British Columbia. Limits estimated to contain one and a half billion feet of red and yellow cedar, spruce, fir, larch and hemlock, all within 3 miles of tide water. Plant consists of saw and planing mills, dry kilns, box and sash and door factories, etc., large vessels can load direct from yard. For price and terms address — F. E. LEUSNER, 75 Yonge St., Toronto, Ontario.

An Important Consolidation

Announcement is made of the organization of the American Timber Holding Company at Minneapolis. The company now holds title to about 1,500,000,000 feet of timber, located principally in western British Columbia, accessible to tide-water, with a very small tract in north-western Washington. The authorized capital stock of the company is \$6,000,000. In effect the company means the consolidation of a number of important timber holdings in British Columbia which heretofore have been owned by individuals. The object of the company is to acquire additional tracts from time to time and additional issues of stock will be made to cover the value of the timber. The company's plans do not contemplate engaging in the manufacture of lumber at present, although such a course may be adopted later.

The officers of the company are: President, M. J. Scanlon, Minneapolis, president of the Brooks-

Scanlon Lumber Company; Vice-Presidents, Former Governor Edward Scofield, Minneapolis, and P. M. Starnes, a heavy owner of British Columbia stumpage; Treasurer, W. S. Dwinell, president of the Fraser River Tannery Company, British Columbia; Secretary, Theodore M. Knappen.

All the officers, with the exception of the secretary, will serve in the capacity of directors and, in addition, the following gentlemen have been elected to the board of directors: F. B. Lynch, vice-president of the Union Lumber Company, Minneapolis, operating mills in British Columbia; E. C. Warner, identified with the Piper, Douglas, Warner elevator interests; Fred E. Kenaston, president of the Minneapolis Thresher Company, vice-president of the Northwestern National Bank, Minneapolis, and also connected with the Union Lumber Company, operating in British Columbia; Henry Salzer, La Crosse, Wis., president of the Henry Salzer Seed Company and owner of large timber holdings in British Columbia; E. E. Pinney, Cedar Rapids, Iowa, president of the E. E. Pinney Coal Company, and also interested in the timber holdings in British Columbia; Judge C. C. Chittendon, Cadillac, Mich., president of the Chittendon Lumber Company, with holdings in Washington; M. J. Landon, Winona, Minn., director of the First National Bank of Winona.

The president of the Newfoundland Pine & Pulp Company, Mr. H. J. Crowe, who has been visiting Montreal recently, spoke enthusiastically on the resources and future of the Ancient Colony in regard to its pulp and paper trade. The Harmsworth people have already expended \$5,000,000 in the purchase of lands and the erection of extensive paper and pulp plants. Also the Reeds, who are the most extensive paper manufacturers in Great Britain, will rival the Harmsworths in the extent of their operations. Since May last a large mill has been erected at Point Leamington, which has already turned out over two millions of choice lumber, all of which will be held in reserve for the shipping season. The Badger mill has also turned out over a million feet of good pine, and extensive lumbering operations will be prosecuted at these two places during the coming winter.

U. S. Consul-General William Martin reports that until lately all large quantities of lumber and timber landed at Hankow came from the States of Washington and Oregon. Japan has recently come into possession of the timber lands of the Yalu district, and is supplying the Hankow market with timber from 2½ feet square down, as well as all the lumber required. It is like American white pine. The timber costs about \$26.50 gold per thousand, and lumber about \$34.50 per thousand, delivered in Hankow.

Review of Current Trade Conditions

Ontario.

The last fortnight has witnessed an improvement in the demand for lumber in Ontario. There is a good demand for lath. Some of the large manufacturers in the Georgian Bay district are reported to be running short of lath. American buyers are buying freely and prices are expected to stiffen. It will be the middle of the summer before the new cut can come to the relief of the situation. British Columbia shingles in Ontario have advanced in harmony with the increased prices on the coast. XXX are now selling at \$3.05 and XXXX at \$3.30. It is expected that a further advance of about 20 cents will be made in the near future. There is quite a tendency all round for higher prices and it begins to appear as though the long-looked for improvement is about to materialize. It would not be wise, however, to take the present improvement as a certain indication of continued better conditions. There is a great quantity of lumber still to be manufactured from last year's cut. There is need for caution. Some dealers expect that it will be well on in the season before stocks commence to look short and that no general improvement can be looked for before that time. The lumber trade in the Ottawa Valley has been quite dull during the past fortnight and a tendency towards weakening is apparent in the best pine siding, shingles and hardwoods. Taking into consideration, however, the good prices which are being obtained for the season's cut by some of the manufacturers, it is believed that the present summer will see as good prices all round as last year. Some of the large manufacturers believe that there will be a good and steady business throughout the coming season. Lath are in good demand but shingles are dull. The only trade in shingles which has been carried on to any extent is in white cedar and in the XX pine variety. The latter is selling at about \$1.50 to \$1.75 per thousand. Number one white pine lath, 1 $\frac{3}{8}$ -inch, is selling at \$3 to \$3.50 per thousand. Spruce mill run is selling at about \$2.25. It is expected that the present prices will be maintained throughout the season. In Western Canada high grades of pine are firm with a considerable tendency towards an advance. Shingles are tending towards lower prices, except red cedar, which are advancing.

Western Canada.

There has been an advance of \$2 a thousand on "common" lumber at Vancouver and it is expected that this will affect the whole of British Columbia and Central Canada. Shingles have also been advanced in price. The former price was about \$1.60 and few are now selling at less than \$1.75. "Common" lumber is in good demand also. In the country there is a large stock of "common" on hand and the advance does not effect that district so sharply. Fir logs have again advanced and are now about as high as they were before the decline, selling at from \$9 to \$10.

Eastern Canada.

Throughout Eastern Canada there is a firm tone in the market for spruce, resulting largely from a shortage of stocks in United States points. Orders, however, have been only for small amounts and the cargo business is not so strong as it was at this time last year. It is not expected that the yards will commence hardwood buying until the opening of the building season. At Boston prices are a little higher. Terms have advanced to a basis of \$25 to \$26, and a few sales have been made at the former price. There is not much call for random and prices are steady. Boards are in small demand. St. John reports that there have been very few transactions during the last fortnight. Only a few parcels of English spruce deals have gone forward by winter liners. Local

holders of English spruce deals have only average stocks and many of the mills will be late in starting. It is apparent, however, that English deals will become quite scarce before new stock commences to arrive on the market. The logging conditions on the upper St. John and its tributaries have been quite favorable. It is generally believed that spruce deals for export to Great Britain will be in excellent demand and prices will advance materially during the coming season. There has been a fair quantity of trade in spruce lath during the winter, but prices are firm. The stock is rapidly being reduced.

United States.

Quite an improvement has been apparent in trade during the last fortnight, and most of the yards are already coming into the market with their requirements. It is believed from present indications that the spring trade will be greater than it was last year. Railroad enquiries are also increasing and a number of orders have recently been given for immediate repairs and for bridge construction. Stocks of uppers are small and prices show a tendency to advance, especially for number three "common." Low grades are plentiful. At New York northern pine prices are firm. It is even expected that an advance will occur at the opening of navigation. There is a poor demand for white cedar poles at Chicago. Hardwoods have been in good demand at Buffalo, especially for oak, both plain and quartered, in the one-inch size. Boards are also in better demand and other hardwood remains strong. At Boston the demand for quarter-cut oak is only an average one, but prices are firm. Fir and spruce are in good demand at Chicago with short supplies in some lines. Red cedar shingles are in light demand at Chicago. "Clear" are quiet at \$3.40. The trade in Chicago is dull at this price and manufacturers are not accepting orders. White cedar shingles are more in demand and may advance as a result of the increased price of red cedar. Prices are quiet at \$3.15 for extras and \$2.75 for "standards." In Boston the best cedar extra shingles are quoted at \$3.90 to \$4 and some business has been offering at both prices. "Clears" are quoted at \$3.40 to \$3.50. There is a fair demand for lath, with steady prices. In New York lath is selling a little low. One and one-half inch lath are \$4 for cargo and \$4.10 for carload lots. Quotations in Boston are: 1 $\frac{3}{8}$ -inch, \$3.90 to \$4; 1 $\frac{1}{2}$ -inch, \$3.25 to \$3.50. Cooperage business is dull at Chicago and Buffalo.

Great Britain.

There is a fair amount of business in progress at London, especially in contracts "to arrive." Canadian spruce batten prices, in sympathy with other white wood results, have been distinctly higher. For 3x7 2nd Quebec, £8 15s. was obtained at Churchill & Sim's last sale. One or two lots sold at one pound ten shillings. The latter price was also paid for 3x7 3rd quality. Arrivals at Liverpool have been light, consisting largely of hardwoods. Spruce values especially are continuing very firm and for the latest arrivals per liner higher prices are being asked, viz., £8 for 3x7 and 8, £9 for 4x9, and £10 10s. for 3x11. Scantling are in good request, 6-inch being in particularly good demand. Shippers' ideas as to the future are that prices will be higher and present quotations show a marked advance.

In the Ottawa correspondence of the "Canada Lumberman" a report recently appeared that Ritchie Brothers had sold the coming season's cut of thin pine and spruce to Bryson & Fraser. We are advised that this purchase was made, not by the above company, but by Fraser Bryson Lumber Company, Limited.

Market Correspondence

Business Quiet at Ottawa.

Ottawa, Feb. 11.—Sales have been few in the Ottawa valley lumber market during the last fortnight. There has been a weakening tendency in the prices of the best pine sidings, shingles and hardwoods. Shipping is very dull. To offset the effect of the present lull in the outlook, manufacturers have sold more promptly than usual, whole cuts of the coming summer. Following the big contracts made by the Hawkesbury Lumber Company, J. R. Booth and the W. C. Edwards Company for deals to be shipped to the English market, entire cuts of the coming season's lumber have been sold by Gilmour & Hughson, Colonial Lumber Company, and St. Anthony Lumber Company. It is generally conceded by the manufacturers that taken all around prices are as good as last year. Including the Ottawa Valley and Georgian Bay districts, about a million cubic feet of waney timber was being taken out this winter and has already been sold to Quebec houses.

A manufacturer who ranks among a few of the largest in the Ottawa lumber trade tells the "Canada Lumberman" that good steady business is likely to be done the coming season. He anticipates no boom in the trade but relies upon a considerable number of large orders coming in from the United States in view of the depleted state of the lumber yards which he recently observed in some of the large centres. The stocks of pine are very large in the Ottawa Valley but no substantial reductions in prices are likely to be made.

The lath trade continues brisk but there is scarcely any demand for shingles. The activity in building benefits the lath trade because the interior work on houses is scarcely checked by the winter. On the other hand, the local demand for shingles and the demand in northern New York where much of the Ottawa Valley shingles are sent, is reduced almost to the vanishing point. When the shingle trade revives the trade will be chiefly in white cedar XXXX and clear butts. The latter are purchasable at \$3 per thousand f.o.b. Ottawa, and there is a considerable stock on hand. Owing to the difficulty of getting pine good enough to turn out XXXX or clear butts of that variety the supply is run down. In fact the shingle trade is confined largely to white cedar except in the XX pine variety, which commands from \$1.50 to \$1.75 per thousand. Only an occasional car has been shipped this month but dealers believe the state of the market be be more attributable to the difficulty of shingling houses than to any serious paralysis of trade. No. 1 white pine lath 1 3/8-inch brings from \$3 to \$3.50 per thousand, and the narrower sell at 25 cents less. The spruce mill run brings \$2.25 per thousand. There is no evidence of a famine of lath in Ottawa, though the supply is exhausted at other Ottawa Valley points. Dealers figure on the present prices being maintained till the end of the season.

J. R. Booth has begun hauling logs by train to his mill in Ottawa. They will be sawed into lumber early in the spring. These logs from the Madawaska limits are shipped at considerable expense over the G.T.R. line, but Mr. Booth finds that the stream is so difficult for driving that the rapid transportation pays in the end. If the logs were not brought to Ottawa now they would not be available until late in the summer, probably not till next year.

The first gang to return from the shanties arrived in the city last week when 25 men from Englehart, above Cobalt, reached Ottawa. They report the winter to be especially favorable for lumbering operations as the snow so far has not been deep enough to hinder the work in the bush. No new men have been sent to the woods since December. One of the largest employment agents shipped 1,000 men, and nearly all were sent to the district below Quebec and to the vicinity of Sault Ste. Marie.

Mr. Peter Whelen, manager of the Shepard & Morse Company, in his inaugural address as president of the Ottawa Board of Trade, made conservation of forests the chief point to be attained. The great losses, he said, caused by fire in Ontario and Quebec last year could not be replaced by reforestation in the next 100 years. The loss was caused largely through railway construction and operation and the carelessness of mineral prospectors, settlers and lumbermen.

"Some time ago," he said, "a system of fire ranging was established and its great success should warrant the different governments interested in doubling the present force employed, placing a government inspector, who should be a thorough and practical woodsman, in charge of, say, every hundred miles, more or less, as conditions might warrant, who would have full charge of all the rangers for the district, with strong powers for prompt action against all offenders who break regulations for fire prevention. The cost would be small in comparison to the good that experience has shown would be accomplished. Also, when a government throws open a limit held by lumbermen to mining prospectors and their operations the government should be held responsible for the reasonable safeguarding of those limits from fires resulting from their action in granting these rights. There is nothing more certain than that where prospecting and mining operations are allowed on timber land fires will be started and sooner or later the district is made a barren waste."

Little Activity at St. John.

St. John, N.B., Feb. 4.—The fortnight has been a quiet one in the lumber trade so far as important transactions are concerned. In shipping circles little activity has developed beyond the shipment of an occasional parcel of "English" spruce deals by the winter liners. In this respect the season has so far been rather behind last year, there being an apparent lack of anxiety on the part of the local dealers and manufacturers to place their deals on the market at this particular time. This feeling is due principally to two conditions, first, that local holdings of "English" spruce deals are not by any means in excess of the average and, second, that in the majority of cases the mills will be several weeks later than usual in starting. The existence of this latter condition gives local people ample time to place such quantities as are available on the market before the re-commencement of sawing operations causes stocks to increase to any important extent. Local stocks of "English" deals have dwindled little by little until the combined holdings in this line at local wharves and yards would not total more than five and one-half millions of superficial feet.

That the quantity will be much less before it is greater is quite certain. At present there are only two sawmills in operation on the St. John River. These are the plants of Stetson, Cutler & Company, one of which is located at Indian town, the other at Pleasant Point. The latter mill has five shingle machines and the daily sawing of these five machines represents the total output of cedar shingles in this section. It will be readily seen how quiet the winter has been in lumber manufacturing circles. In regard to the prospects for sawing, one of the local mills will begin operations late in March, several in April, the much greater number from the 10th to the 20th of May, and two of the larger plants will not commence until June.

Reports having to do with the getting out of logs on the upper St. John and its tributaries tell of continued favorable logging conditions. The snow is present in such quantities as to be ample and yet not great enough to hamper operations to any marked extent. The depth of the snow on the St. Francis, the Tobique, the Green River and the other branches of the St. John in that section of the country ranges from two and one-half to three feet.

A feature of local trade circles is the growth of the feeling of optimism in regard to spruce deals for export to Great Britain. Such transactions as are being made are not of a nature to indicate with exactness the prevailing prices and conditions, but it is safe to say that an enquirer for this line of goods would meet with an offer of \$15 to \$15.50 per thousand feet on a specification containing say, 35 per cent. sevens and eights, 50 per cent. nines and 15 per cent. elevens and up, f.o.b. St. John.

Local business in spruce lath has been of considerable dimensions during the past fortnight. Prices in this line are holding their own but no advance in price is expected in the near future. Shipments throughout the winter have been considerable and stocks are consequently being rapidly cleaned up. Between two and one-half and three millions would cover the available quantity at present writing. An enquirer at this date would be asked from \$2.75 to \$2.85 per thousand for the dutiable article, f.o.b. schooner St. John. The ruling freight rate on lath to New York City by water is 60c. per thousand.

Good Sawing Prospects in New Brunswick.

According to a despatch from St. John, N.B., the prospects in regard to the sawing season at the local lumber mills are for a fairly good year. A number of local mill owners were interviewed recently, and the information gathered points strongly to this conclusion. While in a number of cases the starting of the mills will be considerably later than usual, the majority of the lumber manufacturing plants will be in full swing by the middle of April. An unlooked for slump in the deal market might have the effect of upsetting any plans made by the mill owners for the season's work, but the chances are that such a contingency will not occur. It is thought generally by those most interested that market conditions will become more favorable as the season advances.

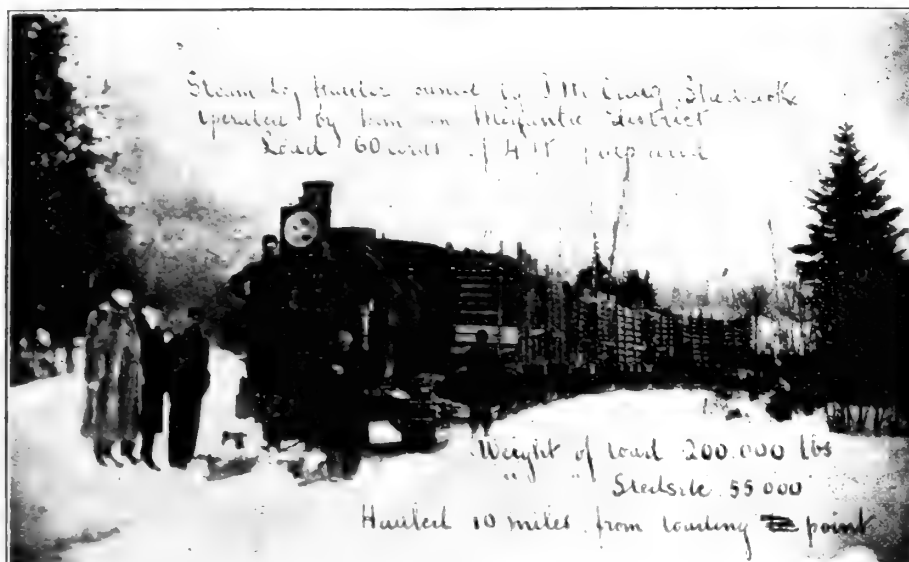

In several cases a delay in starting will be caused by a scarcity of spruce logs. Several of the manufacturers sawed their entire stock last fall and will have to wait until the first rafts from the Fredericton booms reach the city, which will probably be about the last week of May. The alternative is to buy "bank" logs, which are cut on the lower river and which are the first available. These bank logs are, however, nearly all contracted for, and no really important quantity will go on the market.

The cedar shingle manufacturing season promises to be a good one. Last year was the poorest at the local mills in the history of the industry, owing to the strike among the operatives. The result is that cedar logs are very plentiful this year, and, barring labor troubles, the season should be a busy one.

A Sarnia correspondent reports that there is an upward tendency to prices and that advances are expected in the near future.

The advance of \$2 per thousand on lumber in British Columbia will mean a similar advance in Winnipeg, according to a recent report.

The Lombard Steam Log Hauler

Not too early for enterprising lumber operators to begin planning for one for next year.

THE MACHINERY WORLD

What Manufacturers of Logging, Sawmill and Woodworking Equipment are Doing

A Remarkable Band Sawing Record.

It would be difficult to find a testimonial which gives more reasonable cause for satisfaction than a letter which was recently received by Wm. B. Mershon & Company, manufacturers of band sawing machinery, Saginaw, Mich. The letter is as follows:

Messrs. Wm. B. Mershon & Company,
Saginaw, Michigan.

Dear Sirs:—I desire to let you know what I did with your 60-inch band resaw at the North Arm Lumber Company at Eburne, B.C. I was superintendent and filer at the time (last summer). I ran the saw about 10,000 feet per minute and had 18 gauge saws.

We could split 2" by 12" fir with some knots in it $1\frac{1}{2}$ " in diameter, at the fastest feed that was on the mill, or about 200 feet per minute; that is, it would make a 12" cut at the rate of 200 feet per minute, or saw 200,000 feet of lumber in ten hours.

Please let me know if you have ever heard of any one doing any better than the above.

Yours truly,

W. Austin Kennedy,
Nanaimo, B.C., Canada.

This is a record of which Wm. B. Mershon & Company are justly proud. When it is considered that the class of work mentioned might properly call for one of their heavy sawmill resaws and that the work was actually done on one of their new Standard 60-inch band resaws, a machine which is designed for factory use, the results are all the more remarkable. When this class of work can be done on a machine which calls for a 7-inch saw blade and has but 5-foot wheels it makes one wonder what limit would be reached if the work were done on one of their heavy sawmill resaws, which carry both heavier and thicker saws.

A Well Equipped Wire Weaving Mill.

The new weaving mill of the B. Greening Wire Company, Limited, Hamilton, Ont., which is probably one of the best structures of its kind in Canada, is 260 feet long by 130 feet wide. The building is devoted entirely to wire weaving machinery, and contains many ponderous looms, some over 15 tons in weight. These make, with apparent simplicity, extremely heavy smoke stack netting, mining screens, etc., as wide as 72 inches. The fast running smaller looms are engaged in making meshes as fine as No. 70 of brass wire, for sleeping car ventilators. The other buildings of the plant are the wire mill, cleaning house, which has a capacity of 50 tons per day, and the carpenter shop, which is isolated from the other buildings, the increased yard room being used for the different kinds of lumber. Among the interesting features of this industry are: Wire rope spinning, wire drawing and galvanizing, poultry net making, twisting operations, perforating metals, and making Greening's chains with automatic wire chain machines.

Equipment of a Model Sawmill.

Allis-Chalmers-Bullock, Limited, Montreal, have published bulletin No. 1712, on sawmill equipment. The bulletin gives an interesting description of a model sawmill and its equipment. The mill described is that of the Virginia Lumber Company, Virginia, Minn. The equipment includes a new style of band mill, an Allis-Chalmers product. These mills have wheel 8 feet in diameter by $11\frac{1}{2}$ inches face. A particular feature is the absence of machinery for operating the upper guide. This work is now done by the use of a brass cylinder and piston, the cylinder being secured to the guide arm which travels up and down; the piston is stationary, with valve attached to the guide slide. The piston rod is a pipe and is used, as such, to convey the pressure to one end of the piston. It also carries an internal pipe for conveying the pressure to the other side of the piston head. Water under pressure, compressed air or steam may be used. The guides have a quick-opening device. In the upper guide it is to admit the back teeth of double-cutting saws to pass out between the guide strips and to facilitate the changing of either double or single-cutting saws. The lower guide opens not only for the above purposes but also much more widely in order to admit shims to pass downward. The lower guide is pivoted to the centre and is readily aligned by a tail screw. The boards from each band mill go to a No. 2 Allis-Chalmers heavy timber edger. This has a lumber space 72 inches in width with an arbor $4\frac{1}{2}$ inches in diameter. The front press rolls are 4 inches in diameter. They are set forward so as to swing in when the stuff is fed against them, without the assistance of the operator. The back press rolls are 10 inches in diameter and will also raise for a 6-inch piece without assistance from the operator.

Slabs and cants from the band mills are transferred to live rolls in

front of an Allis-Chalmers improved horizontal band resaw, which allows a slab 35 inches in width and 12 inches thick to pass through. The wheels are 6 feet in diameter by $9\frac{1}{2}$ inches face and carry a 10-inch saw. It has a travelling bed feed and broken press-rolls, the feed works being variable and driven from the machine. A vertical adjustment of $4\frac{1}{2}$ inches can be made.

There are many other interesting features in the equipment of this mill, which are described in the bulletin. Allis-Chalmers-Bullock supply, not only sawmill machinery proper, but also all auxiliaries, such as water wheels, steam engines and electric generators and motors.

Machinery Trade Notes

The greater portion of the large quantity of machinery to be used in the new Davidson-Ward shingle mill at Loughborough Inlet is being manufactured in New Westminster, the Schaafe Machine Company alone supplying the 20 shingle machines.

Simonds Canada Saw Company, Limited, have applied for incorporation as an extra provincial company, under the laws of British Columbia. The head office of the company is situated in Montreal, Que., the Vancouver office being located at the corner of Powell and Columbia street, Vancouver, B.C.

Messrs. H. W. Petrie, Limited, of Toronto, have incorporated their British Columbia branch as a separate institution, the name of the western branch being H. W. Petrie (B.C.) Limited. The new company is capitalized at \$100,000; shares, \$100 each. The head office of the company is situated at 422 Abbot street, Vancouver, B.C., Mr. Emil Hallman being the manager in charge.

Mr. Thos. Reid, sales manager of the John Bertram & Sons Company, Limited, for many years past, has moved his headquarters to Montreal where he will be associated with the Canadian Fairbanks Company, Limited, the general sales agents of the Bertram Company. On account of the importance of the Montreal machine tool market this move is an advantageous one to both the Bertram Company and the Canadian Fairbanks Company.

The Vancouver Machinery Depot report the following sales: A 10x12-inch double cylinder, double drum Washington road engine to the Cowichan Lumber Company, of Duncan; a $10\frac{1}{2}$ x $10\frac{1}{4}$ -inch compound geared Washington yard engine to the False Creek Lumber Company, Vancouver; a 9x10 $\frac{1}{4}$ -inch double cylinder, double drum, road engine, to the Thurlow Lumber Company, of Vancouver, to be used on their limits of Thurlow Island; a 10x12-inch special "Halfbreed" yarder to J. M. McCloy, and a 10x12-inch "Halfbreed" yarder to M. Whitman.

Eddy Bros. & Company, Limited, of Bay City, Mich., have just received from the Lidgerwood Mfg. Company a special logging machine for use in their operations in Ontario. They are also having the Lidgerwood Mfg. Company build for them a second plant for use in their spruce operations in the mountains. This will be a cableway skidder. It will be delivered in the spring. A duplicate of the skidding plant is being built by the Lidgerwood people for the Bathurst Lumber Company for operations in New Brunswick.

Calendars From Machinery Firms.

Many calendars have been received since the first of the year at the Vancouver office of the "Canada Lumberman."

The A. J. Burton Saw Company, Limited, Vancouver, have again given expression to their taste in animal pictures. Last year a beautiful tiger's head represented the Burton Saw Company. This year a lion's head is doing honors for this company, the Burton people claiming that their saws are the "King of the West."

The Sumner Iron Works, of Everett, Wash., have chosen the painting, "An Old Time Melody," by Wm Verplanck Birney, to represent them for the ensuing year. This is a beautiful painting and well worthy of the firm using it.

Mr. Robert M. Carrier, the recently elected president of the Hardwood Manufacturers' Association of the United States, is a son of the well known Cassius M. Carrier, vice-president of the Bathurst Lumber Company of Bathurst, N.B.

WILLIAM HAMILTON CO. LIMITED

PETERBORO ONTARIO.

HUSK FRAMES

Made in many different sizes ; so that we have one just to suit your requirements.
The frames are well designed and are all made of cast iron, and are strong enough to last for years.
We plane them all over—top and bottom, and line the boxes with a special babbitt we make ourselves.
The mandrels are of forged steel and have collar forged on.
We usually equip these frames with our famous Parkhurst steel guide.

We are Specialists in the design and erection of Sawmills and their Machinery.

WE BUILD Log Deck Machinery, Band Mills, Carriages, Steam Feeds, Steam Set Works, Edgers, Trimmers, Slashers, Gangs, Gang Circulars, Lath and Shingle Mill Machinery, Engines and Boilers.

They are all of the same good quality which has made "Peterboro Machinery" famous wherever lumber is made.

Don't forget to make use of our Supply Department when you want any Saws, Belting, Chain, Packing, etc. You can save money here.

EDGINGS

Ontario

W. P. Whitney's woodworking shop at Milton, Ont., was recently damaged by fire to the extent of over \$1,000.

The sawmill property owned by the McAlister Lumber Company at Hawkesville, Ont., has been purchased by H. E. Ratz.

The River street boat and planing factory at Parry Sound, Ont., has been taken over by the Thompson & King Manufacturing Company.

James Covey, employed at the Strathroy, Ont., furniture factory, caught his right hand in the machinery. His thumb was torn off and two fingers badly lacerated.

The ratepayers of Kingston, Ont., have carried a by-law in favor of a bonus of \$10,000 to the Wormwith Piano Company, whose premises were recently destroyed by fire.

Henry Disston & Sons, saw manufacturers, 112 Adelaide street east, Toronto, have purchased a site on Fraser avenue and will shortly commence the construction of two factory buildings.

The G. Walter Greene Company, Limited, Peterboro, Ont., which will manufacture all kinds of sawmill machinery, have elected officers as follows: President, G. Walter Greene; vice-president, S. Greene; secretary-treasurer, T. O. Donaldson.

George Nicol, of Nicol Bros. sawmill, Owen Sound, was engaged in operating a shaper when the plank slipped and his fingers came in contact with the machinery. The points of the first three fingers were taken off, and it was found necessary to amputate the top joints.

The Lincoln Paper Mills Company, of Merriton, Ont., have granted the usual annual bonus of 6 per cent. on their wages to their employees. This is the eighth yearly bonus that the employees have received from this company, notwithstanding the financial stringency, the loss of one of the mills by fire, and the heavy expense of refitting another large mill.

Recent Ontario incorporations include: Frankford Cooperage Company, Limited, Frankford, Ont., capital \$40,000; incorporators, G. B. Mott and E. J. Mott, both of Frankford, Ont.; G. A. Graham, H. W. Ackerman and W. S. Morden, all of Belleville, Ont. Trenton Cooperage Company, Limited, Toronto, Ont., capital \$40,000; incorporators, E. R. Lynch, J. D. Montgomery, both of Toronto, and others. Fraser Bryson Lumber Company, Limited, Ottawa, Ont., capital, \$40,000; incorporators, J. B. Fraser, W. A. Fraser, J. A. Storey and H. N. Fraser, all of Ottawa, Ont., and others. Rudd Paper Box Company, Limited, Toronto, Ont., capital \$60,000; incorporators, A. E. Rudd, T. H. Butler and others, all of Toronto. Bartram Bros., Limited, Ottawa, Ont., incorporated to manufacture lumber, capital \$20,000; incorporators, W. B. Bartram and A. B. Bartram, both of Ottawa; J. B. Bartram, C. B. Bartram and L. A. Neil, all of Toronto.

Eastern Provinces

The Dawson Lumber Company's mills at Yarmouth, N.S., have resumed operations.

The Lewis Miller Company will probably build a large sawmill at Jordan Falls, N.S.

A. W. Allen & Son recently added a barrel making plant to their woodworking factory at Middleton, N.S.

Lefaire & Taschereau have been appointed curators in the affairs of J. B. Rheault, lumber manufacturer, Lac Aux Sable, Que.

A carriage factory is being erected at Mahone Bay, N.S. There is stated to be an excellent opening for a woodworking plant at this place.

MacKay Bros., of Charlottetown, P.E.I., have bought the Nova Scotia Carriage Company's factory at Kentville, N.S., and are resuming operations.

C. Jobin & Company, St. Augustin, Que., have been incorporated to operate sawmills. Jos. Jobin and P. Rochette, of St. Augustin, Que., are members of the concern.

Rhodes, Curry & Company, Amherst, N.S., are buying large quantities of quartered oak lumber for interior finish from Virginian mills. It is being used for the finish in the new cars being built by the company for the Grand Trunk Pacific Railroad.

The Cobalt Island Company, Limited, Montreal, Que., has obtained a charter, with a capital of \$1,000,000, to carry on business as lumbermen and operators of saw and planing mills. The members of the concern include G. R. Lighthall, of Westmount, Que.

Joseph Brochu, an employee of J. P. Goulet's sawmill at St. Lazare, P.Q., attempted to replace a belt upon a wheel when his clothing became entangled and he was whirled round by the machinery several times before the engine could be stopped. He died shortly afterwards.

Montreal reports indicate that the cutting along the Ottawa and St. Maurice Rivers this winter will be larger than ever. The number of men in the woods is larger than for years. In the St. Maurice River section renewed activity is evident. The Laurentide Pulp & Paper Company will cut 1,800,000 logs; the Union Bag & Paper Company, 1,000,000, and the Belgo-Canadian Company, 1,000,000; others, smaller amounts. In this district over 5,000 men are at work.

H. J. Crowe, president of the Newfoundland Pine & Pulp Company, says that a big publishing house in London has already expended \$5,000,000 in the purchase of timber lands and the erecting of pulp and lumber mills. The Reeds English paper manufacturing concern, has expended almost an equal amount. A large mill has been erected at Point Leamington, which has already turned out over 2,000,000 feet of choice lumber. The Badger mill has also turned out over 1,000,000 feet of good pine.

The absence of snow in Nova Scotia is now becoming a serious matter, particularly with the lumbering interests. The lumbermen have gone into the woods as usual, but so far the ground in many localities is bare and the question is how are the cuts to be removed from the woods. Snow is needed badly in some localities and unless some comes soon but comparatively little lumber will be got out in those places. It is reported that in some lumber camps men are now

loading away time waiting for snow to come to help the work of moving the cuts.

According to advices received from St. John, N.B., Stetson, Cutler & Company's two mills at Indiantown and Pleasant Point are the only two in the city running at present. The "Big Mill" will close down soon for a month of repairs. The sawmill of A. Cushing & Company, Union Point, will resume operations early in March. Charles Miller's mill at Pokiok will be started late in March, if weather conditions are not too unfavorable. The mill of Miller Bros., Strait Shore, will probably not make a start before May, due to a scarcity of spruce logs until the up-river logs are available. Hilyard Brothers' plant will be under way as soon as the first up-river logs from Fredericton are available, between May 20 and June 1. Randolph & Baker's two-gang mill, at Randolph, will begin operations about the middle of April. The mill of J. R. Warner & Company, Strait Shore, will begin operations as soon as the ice has melted out of South Bay, where they have their logs stored. Murray & Gregory expect to begin sawing spruce and cedar about April 1. John E. Moore's mill at Pleasant Point will begin sawing operations between May 15 and 20. Randolph & Baker's two-gang mill, at Randolph, will begin operations about the middle of April, with every prospect of having a good year's sawing. The mill of J. R. Warner & Company, on Strait Shore, will begin operations as soon as the ice has melted out of South Bay, where they have their logs stored. This condition usually begins to exist between the 10th and 20th of April. Murray & Gregory expect to begin sawing spruce and cedar about April 1st and expect to continue without any cessation throughout the season. John E. Moore's mill, at Pleasant Point, will begin sawing operations from the 15th to the 20th of May, depending upon the quantities in which Mr. Moore's logs reach the city.

Western Canada

The Davidson-Ward Lumber Company are erecting a 20-machine shingle mill at Loughborough Inlet, B.C.

The West Pacific Shingle & Lumber Company, Victoria, B.C., has been incorporated with a capital of \$50,000.

C. A. McGilivray, of Bellingham Wash., has purchased a site on the corner of Stratheona and Boundary avenues, Vancouver, for the erection of a large sawmill.

C. H. Gillis Company, Limited, Vancouver, has been incorporated to take over C. H. Gillis' shingle business in that city, and to build sawmills, etc.

The Pugh & Livingstone Lumber Company, Limited, has been incorporated with a capital of \$75,000, to carry on business at Elkmouth, B.C., with head office at Okotoks, Alta.

L. A. Lewis, of the Brunette Saw Mills Company, has sold timber holdings on the Coquitlam River to Lamont Bros., of New Westminster, who will begin at once to get out shingle bolts.

The Kelowna Sawmill Company, Kelowna, B.C., are adding new machinery for the manufacture of fruit packing boxes. A new planer and a conveyor for handling slabs have been put in.

The Canadian Industrial Company will erect a large paper and pulp mill at a site on the Powell River, near Vancouver, B.C. Mr. A. Carmichael, hydraulic engineer and contractor, is now engaged upon plans.

John Hendry, president of the B. C. Mills Timber & Trading Company, has placed an order for a \$15,000 motor launch, which will be the finest in local waters. It will be of 80 tons register, 70 feet over all and 16 feet beam.

The Canadian Pacific Sulphite Pulp Company, which have a mill at Swanson Bay, have been awarded the contract by the Provincial Government for \$3,500,000 feet of spruce lumber, which will be used for street improvements at

The newly organized Western Canada Wood Pulp & Paper Company, Limited, will erect a large pulp and paper plant at Quatsino Sound, B.C. Mr. G. Kolts may be addressed. Prince Rupert.

Mr. Royal A. Jenney, a prominent business man of Ann Arbor, Mich., is in Vancouver awaiting the report of his timber cruiser, who is examining timber limits up the coast. If Mr. Jenney's expectations are realized he will invest about \$75,000.

The Sayward Lumber Company, Victoria, B.C., now have their plant in operation, though additions of machinery are still to be made which will bring the total capacity up to 250,000 feet per day. A concrete drying kiln is also being constructed.

The Independent Lumber Company, Limited, Regina, Sask., have been licensed under British Columbia laws to build and operate saw and shingle mills and sash and door factories in that province. Denis Murphy, of Ashcroft, is the company's representative.

The Swift interests, which were behind the purchase of the mill at Millside, now the Fraser River Lumber Company, have secured the tannery at New Westminster, in which the chief shareholders were W. S. Dwinell, of Minneapolis, and Captain Garland, of Vancouver.

R. A. Jennings, of Ann Arbor, Mich., representing a syndicate, in which are Junius E. Beale, Mr. Sheran, M. J. Fritz and others, is in British Columbia buying timber. Options have been secured and if the inspection is satisfactory deals will be carried through. It is understood the investments will reach \$200,000 or \$250,000.

Flood water in the Pitt and Fraser Rivers caused considerable trouble and expense to the Fraser River Lumber Mills. Millions of feet of logs, caught in the flow of ice and water, were swept down the Fraser River out into the Gulf of Georgia. The tugs at the mouth of the river were able to get most of the booms and the loss will be comparatively small.

A San Francisco dispatch states that the agitation for tariff reform is having a very disquieting effect there, as the leading lumber firms are heavily interested in American built steam schooners costing from \$100,000 to \$300,000 each. In addition to severely injuring the lumber dealers, the proposed reduction in the tariff, it is thought, would take tramp steamships there with British Columbia lumber and destroy the remnant of the American merchant marine in the Pacific.

S. J. Mackin, sales manager for the Fraser River Lumber Company, Limited, Fraser Mills, B.C., states that the last three months have shown a strengthening in the market greater than his most optimistic anticipations. The Fraser River Lumber Company does an extensive export business, as well as shipping by rail to the prairie provinces. Mr. Mackin says the demand for lumber in Australia and other foreign markets has been better than at any time during the last two years. Values, as a result, have strengthened and in view of the present log situation he believes that the top price for offshore contracts has not been reached.

HUTHER BROS. PATENT GROOVER OR DADO HEAD

For cutting any width groove from one quarter inch to 2 inches or over

Can be used on any Circular Saw Material. Will cut a perfect groove with or across the grain. This is the only Dado Head on the market that gives entire satisfaction on all classes of work. No screw adjustment. For different width grooves, simply remove or add inside cutters. Sold by builders and dealers of woodworking machinery in all parts of the United States. Will send on approval, in competition with any other make on the market; if not the best return at our expense.

Iron Frame "Simplex" Shingle Machine

IN this, our latest design of Shingle Machine, we have incorporated all the advantages contained in our wood frame "Simplex" and added several improvements.

The arbor has been made heavier and a third bearing added to support it outside the driving pulley. The method of putting lead in the saw arbor has been greatly improved. This is now done by swinging on a centre directly under the saw the whole frame which carries the arbor. Thus the alignment of the bearings is not in any way affected and there will be no danger of hot bearings after the lead has been changed. The change may be made while the machine is running and without stopping the carriage.

An improvement has also been made in the method of driving the edger. It is belted direct from a shaft running at right angles to the main arbor from which it is driven by means of a bevel friction. This makes a very neat compact drive and has proved satisfactory in the mill.

The rail on which the carriage travels is made of square steel and when worn can be renewed by simply turning upside down.

Over three hundred of our Upright Machines (wood and iron frames) are in use in British Columbia and Washington.

MANUFACTURED ONLY BY

Letson & Burpee, Limited, Vancouver, B. C.

Woodworking Machinery

For Every Requirement

Fast Feed Planer and Matcher M. 204

Fast Feed Planer and Matcher M. 227

Cowan's Fast Feed Planers and Matchers

are built for the manufacture of flooring and for general mill requirements.

These machines are adapted for working hard or soft wood and contain many new features of special advantage in modern mill practice.

THE WEDGE PLATEN provides for distributing the cut between the top and bottom heads as desired.

THE CUTTER HEAD ADJUSTMENTS compensate for wear of knives and insure better work.

THE GENERAL ACCESSIBILITY permits all adjustments to be made without loss of time or energy.

Gordon Hollow Blast Grate Company

Greenville - Michigan

Manufacturers of

The Old Reliable **Gordon Hollow Blast Grate** and
The "**Tower**" Line of Edgers and Trimmers

The Gordon Hollow Blast Grate
affords the best

FORCED DRAFT SYSTEM FOR SAW MILLS, ETC.,

on the market. It adds from
twenty-five to fifty per cent. to the
efficiency of boilers, many users
declaring that it

**MAKES TWO BOILERS DO
THE WORK OF THREE.**

It also enables the user to dis-
pose of all of his refuse, actually
converting into a SOURCE OF
CONSIDERABLE PROFIT what is usually a SOURCE OF EXPENSE.
In other words, it places him in a position to

**RUN HIS MILL WITH HIS REFUSE and
SELL HIS WOOD.**

Time and experience have conclusively demonstrated that it
GIVES AS GOOD RESULTS WITH WET, GREEN OR FROZEN
SAWDUST AS A DRAFT GRATE GIVES WITH DRY WOOD.

**NO EXPERIMENT.—20 YEARS ON THE MARKET.—OVER
6,000 SETS IN USE.—OVER 600 VOLUNTARY TESTIMONIALS.**

Saves labor in firing.—Lasts forever. Only expense first cost.—
Equally efficient in ordinary furnaces or Dutch ovens.—Adapted for any
number of boilers, from one up.—No change in construction necessary.
A hole must be made through each wall, for the pipe; aside from this,
not a brick need be disturbed.—The largest outfit can be installed
between quitting time Saturday and starting up time Monday morning.—
No difficulty about maintaining a fire at night, when the blower is idle,
and no objection to so doing.

Gordon Hollow Blast Grate Co.,

The Largest Manufacturer of Grates, Edgers and Trimmers in the World.

There are more DISSTON BRAND Band and Circular Saws used than any other make, and by a large majority.

WHY?

Because millmen and sawyers recognize by the use of the DISSTON SAWS they obtain the greatest results for the least cost.

WE MAKE THIS STATEMENT WITHOUT FEAR OF SUCCESSFUL CONTRADICTION.

POINTS OF MERIT

MATERIAL

FINEST
CRUCIBLE STEEL

HARDENING

AND
TEMPERING

DISSTON
METHOD

GRINDING

DISSTON
METHOD

TENSIONING

DISSTON
METHOD

UNIFORMITY.
TOUGHNESS.
GREATEST TENSILE STRENGTH AND ELASTICITY.

Being Manufacturers of our own steel, and thoroughly familiar with its makeup, we are able to absolutely adjust the hardening and tempering processes to the degree giving that perfect combination of hardness and toughness that produces the "edge, tension-holding and standing up qualities" for which the DISSTON SAWS are renowned.

By the DISSTON METHOD all Band Saws are ground perfectly flat and uniform in thickness, thus making possible a very close adjustment of the guides without creating any friction or heat when in operation at the highest rate of feed; and all Circular Saws, whether tapered or of even thickness, are perfectly flat ground on the surface, thus insuring in all saws perfect clearance and true balance.

The uniformity of the material, temper and grinding is a large factor in the proper adjustment of tension; and this, together with the Disston process of tensioning, is the reason why the DISSTON SAWS will manufacture more lumber, under the same conditions, than any other brand of saw.

In the DISSTON BRAND of SAWS you have the advantages of the product of a progressive, up-to-date saw factory, the LARGEST IN THE WORLD, and where saws are made throughout, from the making of the steel itself—the superiority of which has been demonstrated for the past fifty-three years—to the finishing operation, and each process is performed by mechanics of long experience and highest order of skill.

"THE DUNBAR"

New and Improved

STEAM LOGGING ENGINES

Best on the Market

This is the machine for which we claim all the good Qualities possessed by any other and a great many valuable improvements besides.

This time we wish to call your attention to one of many important points which prove conclusively the superiority of the **Dunbar Logging Engines**: that of the Hydraulic Apparatus for raising and lowering the Boiler, an invention of our Mr. Dunbar, Sr. (for which patents are pending). By this device all danger from rush of water to either end of the Boiler, caused by irregularities of the road, is avoided. One of the most serious drawbacks in other Engines is the fact that the Boiler is stationary on the frame, consequently a source of great anxiety because of the danger to both the Crown Sheet and the Tubes. You can readily understand that in going up or down hill either the Crown Sheet or the Tubes are bared, causing them to become so heated that they will leak badly, and after repetition for a time the Boiler will be practically ruined.

This improvement, which supersedes our previous method for raising or lowering the boiler, has been added since cut herewith shown was made.

Should you contemplate putting in a Logging Engine we shall be glad to take the matter up with you and give you all particulars.

Quotations for Logging Sleds furnished.

IT WILL PAY YOU TO INQUIRE INTO THE MERITS OF OUR

New Tie or Log Siding Machine

It slabs both sides of the logs accurately and rapidly at the one operation. Both saws movable to or from the centre simultaneously by means of a lever within the sawyer's easy reach, and the spacing indicated on a quadrant in plain sight. This machine will cut over 3,000 ties in ten hours. In any mill using a Gang, this machine, if used for preparing the cants, will increase the output 20%. It is a compact machine, strongly built, as the cut indicates, to withstand hard and continuous usage. It is without an equal, let alone a superior, in this line, because it meets the requirements perfectly. Let us have an opportunity of sending descriptive matter, and price.

Hand Feed Shingle Mill**

JOHN H. CRANE

Manufacturer of Lumber and Shingles

DELOACH MILL MFG. CO.,
BRIDGEPORT, ALA.

MONTEREY, ALA., JULY 2, 1907.

GENTLEMEN,—I purchased from you in 1905 a "Prince" hand feed shingle machine. I have operated it and find it all you claim for it. We cut at the rate of 30,000 shingles in 10 hours and made first class shingles. I consider your machine a very light running machine. If I wanted another hand machine I would certainly buy a DeLoach Prince.

With best wishes for your success, I am

Yours very truly,
JOHN H. CRANE.

**"Top-Saw"**

The accompanying cut represents our regular saw bench, light or heavy pattern, equipped with "Top Saw," which can be adapted to our ordinary carriages.

This Top Saw is especially made to cut large logs.

The frame of Top Saw is of solid cast iron. The Top Saw arbor slides from top to bottom, by means of screws, visible on cut, which allows using saws of different sizes. This Top Saw is equipped with a tightener, handy to the operator, to set in motion or stop the saw, at will.

Turbine water wheels of all sizes, Gasoline and steam engines, Circular Saw Mills, Double edgers, Shingle mills, Planer and matchers, Buzz planers, Shaping machines, Lath Machines, Band saws, Polishing machines, Trimmers of all Descriptions, Butter and Cheese factory outfits, Acetylene Gas Generators, Shafting, Hangers, Iron and wood pulleys, machinery of all descriptions for factories and saw mills.

A Helpful Tool

Is a Reliable Tool—one that is strong and safe—that saves time, labor and materials. Such a tool is THE SHIMER CUTTER HEAD

It is constructed to suit any matcher, moulder or tenoner. It is specially built to fit YOUR machine and cut YOUR patterns. It is easy to keep in order and produces the same shape of mould for all time.

One of the special features of the Shimer Cutter Head is the divided shearing or shave cut, which is produced by arranging the Bits into upper and lower series, and fixing them upon seats alternately arranged around the Head flange, the seats being inclined to give freedom of cut and clearance protection to all leading points.

All the fitting is saved by this tool, which reduces to plain work the otherwise difficult and tedious patterns. It, therefore, helps out the machine operator and also makes possible an increase of daily output.

Why not give them a trial for 30 days and compare with your present methods. They are made specially to your order and sent to reliable lumbermen anywhere returnable if not satisfactory. Address

Samuel J. Shimer & Sons,
Milton, Pennsylvania

HUSK FRAMES

Made in many different sizes ; so that we have one just to suit your requirements.
The frames are well designed and are all made of cast iron, and are strong enough to last for years.
We plane them all over—top and bottom, and line the boxes with a special babbitt we make ourselves.
The mandrels are of forged steel and have collar forged on.
We usually equip these frames with our famous Parkhurst steel guide.

We are Specialists in the design and erection of Sawmills and their Machinery.

WE BUILD Log Deck Machinery, Band Mills, Carriages, Steam Feeds, Steam Set Works, Edgers, Trimmers, Slashers, Gangs, Gang Circulars, Lath and Shingle Mill Machinery, Engines and Boilers.

They are all of the same good quality which has made "Peterboro Machinery" famous wherever lumber is made.

Don't forget to make use of our Supply Department when you want any Saws, Belting, Chain, Packing, etc. You can save money here.

A word to the Trade about Hot Air, 3,000,000 a day shingle advertisements

The FULL daily capacity of the 200 shingle machines in British Columbia is 4,000,000 shingles. On an average during the months of operation about ten per cent or more of these machines are idle; and it is also well within the truth to state that almost the WHOLE Shingle Industry of the Province is closed down tight from three to four months during every year; and the local consumption of shingles in the Coast cities and towns—about 300,000 per day, must be deducted from the rail shipping capacity; also as shingles are now being marketed, it is safe to state that fully one-third of the out-put will be sold by manufacturers DIRECT to the retail trade. The net result of the above is about 2,200,000 B.C. Shingles per day available for rail shipment, and to be divided amongst ALL the brokers and wholesalers in Canada and the United States who handle our shingles.

From the above facts, Lumber Dealers can judge for themselves as to how much truth there is in an advertisement which states a SHIPPING CAPACITY of 3,000,000 shingles daily.

We are the OLDEST established strictly Wholesale Lumber Dealers in British Columbia, and are in a position to supply the Trade with their lumber and shingle requirements.

Lumber and Saw Mill INSURANCE

FOR OVER THIRTY YEARS we have made a close and constant study of this specialty, embracing not only "The Best Protection at the Minimum Cost" in the sense of Policies in the Strongest Companies at the lowest possible rates, but the enhanced Protection of such Policies so worded as to Insure you under whatever form of sale or undertaking you may make with your customers, unaware as you may be of the application of the Canadian Insurance Law in such instances.

We invite inquiry as to the above and our "ADVICE SHEET" system which we originated several years ago for the special convenience of our Lumber Customers.

We personally inspect each of the plants we insure at least twice a year.

Canada, United States and Great Britain, \$2.00 per Year, in advance; other foreign countries embraced in the General Postal Union, \$3.00.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Special care is taken to secure for publication the latest and most trustworthy market quotations throughout the world, so as to afford to the trade at home and abroad information on which it can rely in its operations.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

No. 5

The Yellow Pine Competition Evil

The competition of southern yellow pine with Canadian white pine in the markets of Canada was a source of trouble to manufacturers during the period of trade depression through which they have recently passed. As a factor in intensifying the evil effect of the depression, the invasion of yellow pine into the Canadian markets weakened the already small demand for Canadian woods and reduced the price for the small amount of Canadian lumber which could be sold. Canadian lumber manufacturers had to face the competition of an almost unlimited supply of this product and they could not, with profit, quote equally advantageous prices. How it came that yellow pine could be shipped such a long distance by rail and still sell at so low a price as to injure the local trade was scarcely understood.

Much light is thrown upon the situation by an address which was delivered by Mr. N. W. McLeod at the meeting of the yellow pine manufacturers which was held recently at New Orleans. Mr. McLeod's address was upon the present methods of yellow pine accounting. He went minutely into the matter of stumpage cost, and showed that a manufacturer of yellow pine who invested in to-day a sufficient stumpage to keep his mill going for fifteen years (the average life of a mill), would have to obtain for his stumpage during the first year of operation \$9.48 per thousand. As the years progressed and the amount of the stumpage held decreased with the cutting, the stumpage cost to be counted in the cost of manufactured lumber would be reduced, until in the last of the fifteen years it would be down to \$5.07 per thousand. The average for the fifteen years would be \$7.28 per thousand. Inasmuch as the best price which is now being obtained for this lumber by the mill men is \$14 per thousand, it can be readily seen that, with an average cost of \$7 to

\$8 per thousand for manufacturing and marketing, there will be a loss during the first year of something like \$2 per thousand feet and that the manufacturer will not be obtaining more than \$2 per thousand for stumpage which ought to bring about \$3.50 at the current prices. As the years progress the chances of making a profit will improve and in the last few years of the operations there will probably be a small profit.

The bearing of these figures upon the competition of yellow pine in the Canadian markets is to be found in the fact that this method of accounting was not so common among the speculative manufacturers of the South as it should have been. Many of them bought large areas of stumpage in the expectation of an early increase in its value. The increase came about, to a certain extent, though it was greatly hampered by the financial depression which prevailed in 1908. With plenty of money behind them, speculative manufacturers would have stood to win handsomely in the long run, but many of them went into the operations with borrowed capital. They could not afford to hold the timber in the woods. It must be manufactured to pay the interest on the borrowed capital. The movement gained such proportions as to make it necessary to manufacture in large quantities. This was done. Mills were put in and a great quantity of lumber came out of the woods which had to find its way quickly into consumption. The local demand and that of the usual markets fell off in an alarming manner, and as the lumber had to be sold at any price which would enable the manufacturers to meet their interest indebtedness it was slaughtered. Canada afforded a good field for this, and yellow pine soon became the serious menace to the Canadian producer which it has now been for many months. The matter is aggravated by the economic fact that the more stumpage the manufacturers in the South had bought, and the more they had paid for it; the more they had to cut, and the more congested the market became. The prices which resulted could not be approached by Canadian producers with anything like a profit. They had to stand aside for a time and let the southern pine come in. Once having obtained a footing in a market it is natural that a product will remain there for a long time if not permanently, and this invasion of the southern product therefore is all the more to be regretted from the point of view of the manufacturer in Canada.

That the situation is viewed with some alarm in the South is also natural, as it involves a struggle among those who are now in the business which will result in the survival of only the very fittest. This aspect of the case is forcibly described in an article which recently appeared in the "Southern Lumberman," of Nashville. The article said in part:

"It is a condition that has operated for harm in both directions, to boom up the price of stumpage and the cost of lumber, and then to boom down the price at which the lumber must be sold, and creates the anomalous situation in which the concerns which, in any other line of manufacture, would constitute factors of safety and strength and conservatism, are the elements of greatest weakness—a condition of affairs that will, with recurring slight ameliorations, continue until such time as the diminution of stumpage reaches the point where it automatically curtails the output of lumber, despite this forced operation of the mills, below the actual demands of consumption, when will set in such a dizzy mounting of lumber prices as will make the doings of the most effective trust that was ever devised in any line of business seem but a butter-fingered sort of thing at best. It will be a great time for the manufacturer who is still in the ring with some timber to cut."

An Invention Badly Needed

According to a recent estimate based upon a canvass of the mills there are about five million cords of slabs destroyed in Canada and the United States each year, and the wood used for pulp last year amounted to about five million cords. It has been estimated that mills having an actual cut of 5,440,000,000 board feet had a final waste of 1,870,000 cords of slabs. It can be seen therefore that there is a crying need for inventors to establish the fact that this refuse can be used for the manufacture of pulp. We have been told that it can, but the fact has not been demonstrated. Iron furnace slag heaps have been seized upon by the brick maker, and the screening dumps of the coal mines have been a valuable source of raw material for the briquette maker. Just as good use can be made of the waste heaps of the mills if slabs and sawdust can be converted into pulp.

The Forest Resources of Ontario

Interesting Address by Mr. Aubrey White
before the Canadian Forestry Association.

One of the most practical and interesting addresses delivered at the recent special meeting of the Canadian Forestry Association was that by Mr. Aubrey White, Deputy Minister of Lands and Forests for Ontario, on "The Forest Resources of Ontario." Mr. White said in part:

"When Confederation took place, we found that 12,000 miles of Ontario's best pine timber, the easiest of access, had already been placed under license. 10,000 miles of this territory was disposed of at 50 cents a mile with no bonus, and 2,000 miles of it at 40 cents per mile with very small bonuses, the whole 2,000 miles bringing about \$100,000. The timber so disposed of was along the Ottawa River to the head of Lake Temiskaming, along and tributary to the Mississippi, the Bonnechere, the Madawaska, the Petawawa, the Mattawa and the Amable du Ford, all these streams being tributaries of the Ottawa River. In the centre of the province the timber on the Trent and its tributaries had been disposed of. In the west the timber on the Nottawasaga, the Severn, the Muskoka, the Moon, the Seguin and the Magnetawan River flowing into Georgian Bay had been placed under license. The timber on this immense area was subject only to Crown dues at 50 cents per thousand, payable as the timber was cut.

"Almost immediately after Confederation the Government of the Province of Ontario had to consider ways and means, and one of the first things it did was to pass regulations increasing the ground rent from 50 cents to \$2 a mile, and the Crown dues upon timber from 50 cents per thousand to 75 cents per thousand. It also passed new Crown timber regulations, which provided that all timber limits should for the future be sold by public auction."

Mr. White then reviewed the principles which had guided the department in its timber sales, commencing with the passage of the Free grants and Homesteads Act in 1868, under which the territory between the Ottawa River and the Georgian Bay was given to settlers, although the pine timber was reserved until the patent issued, except that the settler might take what he needed for building fencing, etc., and remove what was in the way of clearing his land. Settlement commenced to flow into Muskoka and it was found necessary to sell the timber out of the settlers' way. The first timber sale of the new territory was held in 1871, when 487 miles were offered for sale. A condition was imposed that no pine trees less than 13 inches in diameter on the stump should be cut. The Crown dues were raised to \$1.50 per thousand and on this sale a bonus of \$241 per mile was realized. In 1876, on account of the depression in the lumber trade, the dues were reduced to 75 cents. The diameter limit was never enforced because it was found that if the licensee left the small trees, the settler cut them or they were destroyed by fire. In 1872, 5,031 miles on the north shore of Lake Huron were sold and a number of other sales have been held since then. All the sales were held by public auction after due advertisement. The sale of 1872 covered an enormous area, almost one half what has been sold since Confederation. It was entirely in advance of the necessities of the time, as an enormous quantity of pine timber is still standing on the territory then sold. The dues and ground rent remained the same until 1887, when the Government increased the ground rent from \$2 to \$3 per mile and the dues from 75 cents to \$1 per thousand. In 1890 a sale was held of Rainy River region timber on which the dues were \$1, and pine timber only was sold, and for the first time it was provided that the timber cut on these limits should be sawn in Canada. In 1892 another large sale occurred, in which the dues were fixed at \$1.25 and the ground rent remained the same. A regulation was passed in 1897 which has since remained in force, that all logs cut on licensed lands of the Crown must be sawn in Canada. This condition has been extended to spruce and hemlock. In subsequent sales a time condition was inserted for the removal of the timber. At the last sale by public auction, in 1903, the ground rent was increased from \$3 to \$5 per mile and the dues to \$2 per thousand feet. The average bonus at this sale was considerably over \$4,000 a mile. Since then only small areas have been sold, and the condition has been applied that the bid must be by the thousand feet, so that the Government receives pay for all timber and the purchaser pays only for what he gets. Upon one berth which was sold in this way, the highest bid was \$10.52 per thousand feet bonus. Under these new regulations the department measures the timber.

"At the end of 41½ years, we find that we have sold in that period about 12,000 miles, or the same extent of territory that was under license when we took over the management of the timber. For that timber we have received in bonus, ground rent and timber dues about forty million and a quarter of dollars, nearly a million dollars a year. Now in that period of 41½ years we have cut and disposed of 24,000,000,000 feet of pine, or an average of 578,000,000 per annum. We hear a great deal about the rapid cutting away of our timber but there has

been no marked increase in quantity in the past ten or eleven years. In 1896 to 1907 inclusive, the average cut was only 673,000,000 per annum, and for the last two years the cut has been 710,000,000 per annum, or an increase of 37,000,000 over the average of the last eleven years, and this is largely attributable to railway construction in the West, and I may say that a very large percentage of it consisted of jackpine.

"I have taken considerable pains to ascertain what we still have on licensed territory, and as a result of that enquiry we estimate that there is about 7,000,000,000 feet B.M. of red and white pine, besides jackpine, hemlock and spruce, of which there are also large quantities. Hemlock has been called the "skim milk" of the forest. Well, when we cannot get cream or fresh milk we are glad to get skimmed milk, and it may be said of our hemlock that it is coming more and more into use for purposes for which pine is too expensive. Of the jackpine it may be said that it is rapidly increasing in value as its adaptability is admitted for railway purposes, especially ties. Millions of ties are now got out, consisting principally of jackpine timber. Spruce will soon be as valuable as pine."

Mr. White then dealt with the regulations for the prevention of destruction of timber by fire, explaining the measures taken by the Department of Crown Lands, and stating that last year on licensed lands there were 329 rangers, for which the Department's share of the wages and expenses was \$46,600, the licensees paying an equal amount. On the railways the Department had 147 rangers, costing \$53,235. The total fire ranging cost therefore, was \$146,478 for the Department exclusive of what was spent on forest reserves and unlicensed territory. In considering the question of the amount of timber on unlicensed territory in the province, Mr. White said that the policy of the Department in recent years had been to keep from settlement areas on which they knew there were considerable quantities of pine or spruce, and which were not deemed suitable for farming purposes. He subdivided the country for the sake of convenience into three sections, drawing a line from the town of Mattawa, up the Mattawa River, across Lake Nipissing and down the French River to Georgian Bay. The timber he referred to was all north of that line, which area he subdivided as follows: First, all territory east of Port Arthur and south of the height of land; second, all territory east of Port Arthur and north of the height of land; third, all property west of Port Arthur in the Thunder Bay and Rainy River Districts. In the first of these divisions the bulk of the white and red pine was located and the following reserves had been set aside: Temagami, area 5,900 square miles; Mississaga, area 3,000 square miles; Nipigon, area 7,300 square miles, and Thunder Cape, 80 square miles, a total of 16,280 square miles or 10,419,000 acres.

"The Temagami Reserve is a very important one, and contains a large quantity of pine timber, variously estimated at from three to four billions of feet B.M. of pine. A large percentage of this timber is of first class quality, and from its situation it will bring a large stumpage price per thousand feet. The timber will go partly down the Ottawa waters and partly down the Sturgeon to the Georgian Bay. I think we are safe in assuming that on this reserve there is about three and a half billions of white and red pine. We are surveying it into blocks, and estimating it from year to year, and shall know with some degree of closeness what the quantity of timber is."

"North of the Temagami Reserve, extending through to Abitibi, north and west of the Frederickhouse River, we have found some blocks of pine timber, not any large areas, but sufficient to warrant the opinion that we shall find in that region some 250,000,000 of feet. Then south of the Temagami Reserve are a number of townships still in the Crown, containing a large quantity of first class white pine timber. This timber will go down the Sturgeon River and its tributaries to Georgian Bay, or it can be manufactured on Lake Nipissing and have the timber shipped by rail. Having regard to the quality of this timber and its accessibility, it has as high a stumpage value as, perhaps even higher than, the Temagami timber. In this area the berths are surveyed, and we have estimators each year, and we shall soon have an accurate idea what the actual quantity there is. At present it is estimated at two billions of feet B.M. In territory north and west of Temagami Reserve, extending westerly towards Port Arthur, and covering Lake Nipigon and tributary waters, our explorers have come across blocks of pine here and there, some of it north of the height of land, and some of it south. I think we may fairly put the timber in that region at, say, a billion and three-quarters. There is no settlement as the region is far away from railway communication. We have not much information about this region beyond the reports of surveyors and our explorers, but we think we shall be within the mark in placing the quantity of pine that will be found there at a billion and three-quarters of feet B.M. In this division is situated

the Nepigon Forest Reserve, in which there is a considerable body of pine, notably up the Gull River. Thunder Cape Reserve is only 80 miles in extent and it was set apart to protect the timber on the promontory called Thunder Cape and to preserve it from destruction by fire.

"On the Mississauga River, which flows into the Georgian Bay, we have created a forest reserve with an area of 3,000 square miles, or 1,920,000 acres. On this we had last year a staff of 21 men, at a cost of \$7,600. A little timber was damaged by fire just at the close of the season, which we are now offering for sale. We have also surveyed this reserve into blocks and are carefully estimating the timber, but it will take some time to complete the estimate. The timber in this reserve is so close to Lake Huron and so easily lumbered that it should bring a very high stumpage. The quantity of pine on this territory has been estimated at from three to four billions of feet."

"In the territory west of Port Arthur, that is in the Thunder Bay and Rainy River Districts, we have a very large body of pine timber, much greater than we believed to be the case some years ago. One of our most expert men is now of opinion that south of the C. P. R. in the territory from Port Arthur to the western boundary we have probably two billions of feet B.M. of pine, and in the territory north of the C.P.R. in the same district, about three hundred millions of feet B.M. This timber, owing to its proximity to the prairie country and to the immense railway construction that has taken place, has also a very high stumpage value."

"I now come to the great region lying north of the height of land on waters flowing towards the Hudson Bay. Here in the not distant future will, in my opinion, be found our greatest timber asset. This northern slope is covered with a great growth of spruce timber, becoming smaller in diameter, of course, the further you go north, but all the timber there will come into use if we can preserve it from destruction. For my present purpose I will take only the best spruce area on that slope, commencing at the eastern boundary of the province and extending along the route of the Transcontinental four hundred miles, with an average width of 100 miles to the south and 50 miles to the north of the line. On this territory there is estimated to be 250,000,000 of cords of pulpwood. The best quality and size is found on the territory between Ogoke and Kenogami Rivers, and extending from one stream to the other. These pulpwood areas cover parts of the Districts of Nipissing, Sudbury, Algoma and Thunder Bay. West of Port Arthur, on waters flowing north, there is estimated to be 50,000,000 cords, so that here in this northern region we have an estimated quantity of 300,000,000 cords of pulpwood timber, which will in a short time have a considerable stumpage value. I suppose I am quite within the mark in putting its value now at 75 cents a cord, for a considerable percentage of the spruce and jackpine, probably 15 to 20 per cent., will make merchantable lumber. It may be said that this territory is not immediately available. That is so, but within the next few years the Transcontinental Railway will be constructed through it, and in my opinion that railway will be taxed to carry the enormous quantities of pulp, rather may I hope paper, that will be produced there. Consider the fact that there are seven or eight large rivers all flowing towards the railway line, down which will pour enormous quantities of sawlogs and pulpwood to feed the mills that will certainly be erected at points where these rivers cross the railway. I apprehend that in the not distant future, the Transcontinental will not be the only railway in that region, and one's imagination is not equal to picturing the possibilities there. 300,000,000 cords of pulpwood would mean about 150,000,000,000 feet B.M. How much of this would make merchantable lumber it is impossible at the present moment to state accurately, but the quantity will be much larger than some of our theoretical friends are willing to admit. Much of this timber is situated on what is called the "Clay Belt," through which the railway will run, and there will be no doubt a large influx of settlers in that country as soon as it is opened up. Then our responsibility will be increased

"The total area of the Province of Ontario, exclusive of the Great Lakes, is estimated to be 140,000,000 acres. Of this there are surveyed 46,000,000 acres, leaving an area unsurveyed of 94,000,000 acres. There have been alienated by sales, location, etc., 24,000,000 acres, leaving still in the Crown 116,000,000 acres. The situation may be summed up as follows:

Licensed before Confederation	miles	12,000
Licensed since Confederation, about	miles	12,000
Total	miles	24,000
Still subject to license, nearly		20,000 miles.
Total receipts from timber since 1867 to the end of 1908...		\$41,250,000
Total receipts from lands and mines from 1867 to end 1908		9,000,000
Total		\$50,250,000
Pine timber cut since 1867 to end of 1908	feet	24,000,000,000
Average cut from 1867 to 1908	feet per annum	578,000,000
Average cut from 1896 to end of 1907 ...	feet per annum	673,000,000
Average cut for last two years, 1907-8.....	feet per annum	710,000,000

Estimated quantity on licensed lands, still standing..feet 7,000,000,000
Timber still standing on unlicensed lands—

U. S. May Remove Duty on Ground Wood.

A reduction in the duty on newspaper print from \$6 a ton to \$2 a ton; the placing of ground wood on the free list; and the establishment of a duty of 1-12 per cent. per pound on mechanically ground wood pulp were recommended by the select committee on pulp and paper investigation, which made a report to the House of Representatives of the United States recently. The committee's report stated that it would seem that the production of newsprint paper or the other very cheap grades of paper are to-day dependent upon the continuation of cheap ground wood produced from spruce trees and that that condition is likely to prevail in the future. The amount of spruce consumed in the United States in 1907, according to the report, was about 1,260,000 cords for ground wood, about 1,420,000 cords for sulphite fibre, and about 3,450,000 cords for lumber. The amount of standing spruce is variously estimated, but is roughly guessed to be about 70,000,000 cords east of the Rockies. An appeal is made for the conservation of the forests.

The paragraph recommended for insertion in the tariff bill, placing a duty of 1-12 of a cent per pound on mechanically ground wood pulp, provides that this article shall be admitted free of duty from any country, dependency or other subdivision of a Government which does not forbid or restrict the exportation or does not impose an export duty on mechanically ground wood or pulp for use in the manufacture of wood pulp. The duties recommended for print paper are: On print paper valued at not over two and one-quarter cents per pound, 1-10 of a cent a pound; and on paper valued at over two and one-quarter cents a pound and not over two and one-half cents a pound, 2-10 of a cent per pound. It also recommended that the forest service investigate the question of the production of ground wood and sulphite fibre from other kinds of wood than those now used.

Wholesalers Want Greater Recognition.

It is a moot question in British Columbia whether wholesalers should attend mill men's conventions. Although they are not recognized officially as a necessary adjunct to the lumber business, the mills of British Columbia with few exceptions do some business both in the prairie provinces and elsewhere through the wholesaler. The wholesaler has come to be recognized, and before long he, or "the broker," as he is sometimes wrongly called, will probably have to be recognized officially. In the United States wholesalers are admitted to the deliberations of the mill men whenever the mutual interests make it advisable. The wholesalers in Vancouver think that the millmen and timber owners should recognize the legitimacy of their business by inviting them to attend their meetings. Before the wholesaler came into existence in British Columbia there was little or no transpacific business done from Vancouver, except by vessels chartered specially for that purpose. During the past few years there has scarcely been a tramp steamer or a freighter leaving Vancouver without a consignment of lumber or shingles. This is almost entirely due to the wholesaler. The wholesaler also claims that of late years he has been instrumental in maintaining prices. He admits that there are black sheep in his flock as in others, who will cut prices, but claims that the object of the legitimate wholesaler, as much as any one else, is to maintain prices.

The Board of Railway Commissioners for Canada have made an order, doing away with the stop-over charge of one cent a hundred pounds on lumber at Cartier, North Bay and Sarnia. Cars which arrive at these points are held over while a message is wired to Toronto for directions as to their further destination.

A Modern and Thoroughly Equipped Mill

**Nepisiguit Lumber Company's Plant at Bathurst,
N. B.—Description of its Organization and Facilities.**

The Nepisiguit Lumber Company, Limited, of Bathurst, N.B., was organized during the summer of 1907 and received its charter from the Dominion Government on October 23rd, 1907, the present officers being: President, Ralph W. Ellis; Vice-President, Charles D. Ordway; Treasurer, Fred S. Morse; Secretary, Alex. W. MacRae; Assistant Secretary, Edward A. Appleton. The company purchased all the cedar tim-

To enable the mill to run after freezing time in the fall, a Lidgerwood cableway piling rig was installed. With this the logs are taken out of the water and piled up in the mill yard; then with the same rig they are taken from the pile and landed on the haul-up at the mill. A Sturtevant blower system for heating the entire mill has been in operation all winter and has proved very successful; by this means the tem-

ber on 318,000 acres located along and near the Nepisiguit River, the purchase also including two mills, the large one at Bathurst and a smaller one on the Nigadoo River, ten miles north. The company immediately started operations in the woods and, although the fall was extremely wet and men were scarce, they succeeded in cutting a little over two million feet. An additional length of 35 feet was built on the Bathurst

perature is such that it makes the mill a pleasant warm place for the men to work in. Because of these up-to-date improvements the mill is able to run the year round, which enables the company to keep up a higher standard of organization, and the best men are attracted.

The management started with the direct purpose of manufacturing a shingle second to none. This they have accomplished, as all their customers testify. Besides doing this, they have also given special attention to the packing. Their shingles are therefore very closely packed, that is, with less open spaces than any other shingles. This means a great saving to the users of shingles, and cannot be overlooked by the dealers. The product has been sold right up to the saw on all grades ever since the company started, and if they had permitted, it could have been several million over-sold. Customers who have had these shingles are anxious to continue buying them, for their "gilt edge" and exacting trade. Outside of the local sales through the Maritime Provinces, the entire output is handled by the Fred S. Morse Lumber Company, of Springfield, Mass.

Mr. William G. White, the manager, besides being thoroughly familiar with the timber, logging operations, etc., of the company, is a practical mill man and takes great pride in looking after every detail necessary to the turning out of a high class product. The limits from which the cedar is taken are so located that practically all of it comes into and down the Nepisiguit River. The quality of the cedar from this section has always been considered second to none anywhere in Canada.

The logging operations for this season were begun early last September and pushed along so that the cutting and yarding were completed

mill, the entire floor raised two feet, two new boilers of 150 h.p. each installed, the engine and all machinery thoroughly overhauled, and, in fact, a new mill was practically made by the installation of every up-to-date system and appliance.

The mill, with eight Dunbar shingle machines, started up on June 23rd, and ran nearly every working day up to January 23rd, turning out

over 100,000 per day. This winter the small mill at Nigadoo has been taken down and moved to Bathurst, where it will be put up as an addition to the large one, on the foundations put in last fall. This will give the new mill an increased capacity of 50 per cent., making the daily product from 160,000 to 180,000. The improvements will be completed in May, whereas the main mill will start up in the early part of March.

before Christmas, and now the logs are all on the banks of the streams ready for the open water this spring. Some of these logs, on the far end of the limits, are 85 miles from Bathurst, which not only makes a long distance to drive them, but also is a long and tedious road to haul camp supplies over the portage. This road, however, is good in winter with sleds, but practically inaccessible in the summer with loaded waggons.

The British Columbia Trade

The Real Situation in Shingles.

The real situation in regard to the shingle business in British Columbia has been difficult to get at authoritatively. Now that the selling system has been discontinued, however, former members are more willing to talk. A prominent dealer who does a good deal of shipping to the United States, when discussing the matter, stated that although the two selling firms through which all the shingles for the open market were supposed to have been handled, were still carrying on business as brokers, the selling arrangement on which the association had been based was no longer in operation. He thought that the system had been a good one, but it had required absolute loyalty for its mainspring, and this mainspring was found to be defective.

When asked to be more specific he said: "Something over three years ago the shingle manufacturers decided that if something was not done to save the annual price slaughtering, many of them would be forced out of business. All sorts of schemes were evolved and I attended most of the meetings. Talk about high finance. I used to elaborate schemes in my sleep and was bordering upon a nervous collapse in my efforts to plan some proposition agreeable to all parties concerned, when the opposition factions which existed among the shingle makers finally came to terms, the agreement to last one year. The plan was a good one, and if it were in operation to-day, mills could have been asking a reasonable profit on their shingles instead of stuffing them off on the Canadian market at about cost. This would have been brought about not by bolstering up prices, but by preventing ruinous price cutting.

"Roughly speaking, the manufacturers agreed that all business offering should be done through two selling companies; that each mill should be allotted a percentage of the total sales made, and that this allotment should be on the basis of 26,000 shingles a day for every shingle machine installed. Thus all mills reported to the selling companies, which balanced their books every month, enabling them to keep the whole situation well in hand.

"The proposition was an ideal one for the industry and was fairly successful during the first year, although some murmurs were made by the smaller mills. It was then decided to enter on two more years with the same agreement, and many more small mills were included in the arrangement. It was understood, however, that, if at the end of the second year, less than 25 per cent. of the shingle mills wished to continue, the plan would be abandoned. During the third year there was a good deal of murmuring, and it was decided that mills should be allowed to sell direct to customers, with the understanding that they report back these sales, and not go over the limit of their allotment.

"This was the cause of the commencement of trouble. I am not prepared to state that some of the big mills deliberately sold over their allotment, in fact sold as many shingles as suited them, as some have said, and thus gave those of the shingle mills doing business in a small way the worst of it, but some of the little mills made this accusation, and asked for a committee of investigation. This committee did not materialize, so far as I know. A rather stormy meeting resulted in the discontinuance of the arrangements. There is an agitation now on foot to establish a shingle bureau similar to that in the State of Washington, but this has not proved a success over there, and would not here. After all, it comes down to the old solution of all price questions, supply and demand, and the supply in British Columbia is too heavy for the demand."

Hand Loggers Meeting Opposition.

The hand loggers of British Columbia will probably meet with some opposition in their application for the restoration of their licenses. Their privileges were curtailed a year ago, so as to apply only to logs handled north of Rivers Inlet. In the past the hand loggers reaped a rich harvest in taking the fringe off the Government timber along the water front. They were quite expert in their business and worked without the modern equipments. As they paid a stumpage rate to the Government they were encouraged. The Government holdings along the water front which were not under license, however, became scarce, and in many cases the hand loggers commenced to nibble off the fringes of the licensed holdings. To make matters worse, many of the larger hand loggers made a wrong interpretation of the Hand Logger's Act. They did not consider that it meant that they should operate by hand only, and many of them used horses and established plants to work the water front timber.

These plants necessitated the expenditure of large sums of money. When license holders complained of the aggressiveness of the hand logger the Government amended the Act so as to make it impossible for hand loggers to conduct their business. A large number of men were thrown out of employment and their plants became useless. They now wish to have the licenses operative under the old conditions and to this the license holders strongly object.

It is regrettable, however, that so many men have been obliged to

stop work. They were revenue producers and the majority of them no doubt adhered to the law, or what had become the general interpretation of the law. But it seemed necessary that men who were operating large tracts under license at large expense should be protected. Timber holders who had to work back from the water, considered the timber nearest the water a most valuable asset and could not afford to have it snipped off bit by bit. While it is true that these operations have been stopped, all the hand loggers can be absorbed in the woods, in operating licensed timber. It would seem, taking all things into consideration, that the day of the hand logger had passed, and that the Government should stand by its decision to allow hand loggers to operate only in sections where they may not interfere with the operations of license holders.

The Western Canada Pulp & Paper Company have acquired the entire pulp limits, foreshore rights and water privileges of the Quatsino Power & Pulp Company. An area of 55,000 acres of timber lands thus changes hands. The company will erect a large mill at Marble Bay.

Short Lengths from British Columbia.

H. W. Petrie, Limited, Toronto, Montreal and Vancouver, have favored the "Canada Lumberman" with a copy of their machinery stock list for February, 1909. The list includes an exceptionally wide range of machinery and will well repay perusal.

The Heaps Timber Company, Limited, of Vancouver, B.C., are opening up their Narrows Arm camp of Sechelt Inlet and will continue to operate it in addition to the Jarvis Inlet and Hardy Island camps which have been running steadily all winter with the exception of the period during the recent cold spell. The company is about to start work on the construction of a new seven-mile logging railway at Ruskin, B.C.

The first general meeting of the British Canadian Wood Pulp & Paper Company was held recently. According to the secretary's report the property and assets of the company amount in value to \$232,000. The plant of the company is almost ready for operation and will, it is claimed, be the first large industrial enterprise in Western Canada ever starting operations without owing a dollar. The capacity of the present plant is 150,000 pounds of fibre paper per week. The plant will be started in a few weeks.

The British Columbia Government is being criticized in several quarters, noticeably by the "Victoria Week," upon its pulp concession policy. The claim is made that these concessions have been frequently abused. It is further asserted that parties to whom the concessions are granted on condition that they erect pulp mills within a stated period often break the agreement and obtain extensions of time so that they may be able to dispose of their limits at a profit. A result of this condition of affairs, it is claimed, is that large tracts of timber lands are continually tied up. Such a condition of affairs ought to be carefully watched, and measures taken to prevent it.

Messrs. A. S. Brake, of Vancouver, B.C., representing the Joseph Peace & Sons Saw Works, of Sheffield, England, have recently secured several good trial orders for the English saws from the following American firms: The Canyon Lumber Company, at Everett, Wash.; the Wyerhaeuser Lumber Company, at Everett, Wash.; the Claw-Hartly Shingle Company, at Everett, Wash.; the Puget Sound Lumber Company, at Bellingham, Wash., and the E. K. Woods Lumber Company, of Bellingham. These orders, Messrs. Brake state, are significant as demonstrating the good qualities and lower prices of English saws in comparison with the American, in that they are able to lay down old country saws in Washington territory at lower prices than those of local manufacture.

Mr. J. M. Patullo, of Vancouver, in addressing the recent joint meeting of the City Council and the railway representatives, regarding the alleged high price of his property in False Creek Basin, Vancouver, where the railways desired to make terminals, said that he was carrying on a box factory there and used nothing but spruce, that he was able with his two lots, valued at \$30,000 by him, and containing fifty feet front, to make from ten to twelve per cent. for his company. He said that he was confident that the duty on lumber would be removed and conditions would then improve very much. At the same conference Mr. W. T. Gillman, assistant to the president of the Northern Pacific, stated that the Great Northern and Northern Pacific desired to establish terminals in Vancouver and enlarge their facilities to secure a portion of the growing trade, particularly lumber carriage. He said that those who could read the signs of the time were sure that the tariff would be taken off American lumber, and that meant opening up great markets in the prairie sections of the States for the Canadian mills. They anticipated a great activity in lumber on that account and wished to prepare for it.

Canadian Forestry Association Convention

The Canadian Forestry Association held a special meeting at the Convocation Hall of the University of Toronto on February 11th and 12th. The meeting was well attended and was especially fortunate in being patronized by his Excellency, Earl Grey, Governor-General of Canada who officiated at the opening of the convention. On Thursday, the first day, the chair was taken by the president, Hon. W. B. Snowball, Lieutenant-Governor of New Brunswick. His Excellency, Earl Grey, in opening the proceedings, said that it was hardly necessary to comment on the extreme importance of forestry. He pointed out as a proof of this the fact that the President of the United States had recently called the attention of the people of that country to the reckless misuse of their forests. He urged that the forests should be managed under careful and well conducted regulations and upon lines which would increase the public revenues, and at the same time steadily advance their capital value.

Hon. J. M. Gibson, Lieutenant-Governor of Ontario, who followed his Excellency, alluded to the steps which had been taken when he was Minister of Crown Lands to set aside and develop forest reserves, notably those of Algonquin Park and Temagami.

Hon. Sydney Fisher, Minister of Agriculture for the Dominion of Canada, also spoke, and laid stress upon the necessity for conservation of the forests, which he said was the basis of the conservation of all other resources.

Mr. Watson, president of the Toronto Board of Trade, spoke along similar lines and was followed by Hon. W. C. H. Grimmer, Surveyor-General of New Brunswick; Mr. Frank Hawkins, secretary of the Canadian Lumbermen's Association; Prof. McClement, of Queen's University, Kingston, Ont.; R. Bergerin, Quebec; J. Kelly Evans, Toronto; J. B. Laidlaw, of the Canadian Fire Underwriters' Association, and Dr. B. E. Fernow, Dean of the Faculty of Forestry of the University of Toronto.

President Snowball, in his annual address, referred to the establishment of a faculty of forestry at the University of Toronto, and a department of forestry at the University of New Brunswick. He thought that each province should have the whole of its wooded area carefully surveyed and mapped, so as to show the class and quantity of timber on each block, the nature of the soil and its suitability or unsuitability for farming. This was work which forestry students could do more satisfactorily than anyone else. He proposed that at the head waters of all the principal streams there should be forest reserves for the regular water supply. Referring to the export of small spruce and balsam for Christmas trees, he said that the question which arose in his mind was, why they should prohibit this, and allow trees of a larger size to go out of the country instead of manufacturing them into pulpwood and paper here, so as to leave hundreds and thousands of dollars in the hands of our own people, and why they should permit the cutting of small logs off the public domain if they would grow larger. In conclusion, Hon. Mr. Snowball dealt at some length with the question of the preservation of the forests, and with the attitude taken by the public in the United States, many of whom are calling for a reduction of the duty on lumber so that Canadian lumber may go into the country and thereby release the drain upon the forests of the United States.

A paper prepared by Mr. A. T. Drummond on the forestry question was read by his secretary. He dealt principally with the question of fire in the destruction of timber, and suggested that a Bureau of Forestry be established in connection with the Provinces of Ontario and Quebec similar to the Bureau at Washington.

President Falconer, of the University of Toronto, delivered an address to the delegates and commended the services of the faculty of forestry in the University.

An excellent paper was read by Mr. Aubrey White, Deputy Minister of Lands and Forests of the Province of Ontario, upon "The Forest Resources of Ontario." This paper is published in detail elsewhere in this issue.

Mr. F. C. Whitman, president of the Western Nova Scotia Lumbermen's Association, delivered an address upon "Forestry Conditions in Nova Scotia," in which he dealt with the method under which the land is held, the system of fire protection, the forestry services which are needed, and the difficulties encountered. His paper was brief and to the point.

Mr. R. B. Miller, M.A., M.F., of the Department of Forestry of the University of New Brunswick, read an instructive paper upon general forestry conditions and forestry education. Mr. Miller urged strongly that the most effective method for preserving the forests was by means of education. He illustrated this by showing the advance which had been made in the United States, and the advances which have been obtained by the steps which have already been taken in Canada.

Dr. B. E. Fernow, Dean of the Faculty of Forestry of the University of Toronto, delivered an address entitled "What We Want." Dr. Fernow's main point was that the Governments of the Dominion and the provinces should make radical changes in their attitude towards the forest resources of the country, the present attitude of the Governments he characterized as "The devil take the hindmost," or, "What has posterity done for us?" The Government should be brought to realize that a rational, properly directed technical management would secure all the value of the forests without reducing the capacity for further production. No simple provisions, such as setting a diameter limit in cutting the timber, would suffice. Dr. Fernow dealt at some length with the importance of preventing destruction by fire. He thought that a great deal of the failure of present day methods of forestry management was due to the lack of definiteness in the propositions for reform. The existing methods of disposing of timber, which benefit an influential class of citizens (the timber limit holders), who would naturally battle for their continuance, were a serious influence against practical reform. He suggested the creation of provincial legislative committees, composed of influential members of the Forestry Association, who would study local conditions and urge necessary reforms upon the Government.

Mr. Abraham Knechtel, Inspector of Dominion Forest Reserves, delivered an address upon "The Dominion Forest Reserves." Other interesting addresses were, "Waste Land Planting," by E. J. Zavitz, of the Ontario Agricultural College; "The Interest of the Paper Manufacturers in Conservative Forestry," by Carl Riordan, of the Riordan Paper Mills Company, and addresses by J. B. Miller, vice-president of the Canadian Lumbermen's Association, and Elwood Wilson, of the Laurentide Paper Company.

A number of resolutions were adopted during the meeting, among them being the following:

Commending the Dominion Government for its proposal to appoint a Parliamentary committee to investigate the whole subject of the forest wealth of Canada and the methods of forest conservation.

That the Provincial Governments controlling Crown lands be requested to withdraw from location all townships under timber license at present open for settlement, which are found to contain less than 50 per cent. of arable land, and that in the case of townships now under license which are found to contain more than 50 per cent. of land suitable for agriculture, the licensee be given a reasonable time to remove the merchantable timber before the land is opened for settlement.

That the Provincial Governments be urged to place in permanent forest reserves all non-agricultural lands at the head waters of streams.

That a text book of forestry be compiled from the reports and other literature published by the association, and be distributed for use in schools and colleges.

Cheaper Labor in the United States.

So much discussion of the tariff question has appeared in the United States press that practically every point of view has found its adherents. There seems, however, to have been a unanimity of opinion to the effect that lumber could be manufactured more cheaply in Canada than in the United States. Many reasons were given for this, chief among them being that Oriental labor was used in Canada and was cheaper than the white labor used in the United States, and also that stumpage was much cheaper in Canada than in the United States. It is interesting therefore to have the views of a Canadian wholesale dealer on these matters.

The head of a prominent wholesale firm in British Columbia when asked whether lumber could be manufactured more cheaply in the United States than in Canada was very decided in declaring that it could. A good proof of this was afforded by the fact that his firm had been buying lumber in the State of Washington and shipping it to the Northwest at less than it could be handled for from British Columbia. This included all grades above "rough." The profit on all grades of British Columbia lumber between "rough" and "clear finish" was hardly a living one. The Washington mills were able to sell more cheaply because the first cost of their machinery was less. Moreover they could obtain competent white labor at \$1.50, and one white man could do as much as three Orientals. These conditions indeed were not unusual. They prevailed generally throughout the year. He did not believe that the removal of the duty from Canadian lumber would improve matters.

An important reason which was having a strong influence against the removal of the duty was the fact that, with one exception, all the members of the delegation of American lumbermen who went from the West to Washington to ask for the removal of the tariff, owned timber in British Columbia. The chairman of the Ways and Means Committee at Washington drew their attention to this and said that evidently they had strong personal reasons for desiring the removal of the tariff. This led the committee to the belief that these men voiced their own opinions rather than those of the mill and timber owners generally. The wholesaler referred to above, said finally that so far as he could gather from the mill owners of British Columbia they were indifferent as to whether the tariff was to be removed or not. He himself would prefer to see things remain as they are.

In the Courts - An Important Case

Free Grants and License Holders.—The case of Mr. John W. Martin, of Barry's Bay (license holder), against John Romleskie and several other free grant settlers in the township of Sherwood was mentioned in our number of 15th January last. No appeal was taken from the judgment and it therefore stands as the established law of the province.

All questions of title which could possibly be raised were raised and argued and determined in that case, and we publish for the benefit of license holders and free grant settlers a summary of the actual formal judgment which has been issued by the High Court of Justice.

(1) This court doth declare that the plaintiffs (the license holders) have been and are entitled under and by virtue of the Crown timber license to all the pine trees growing or being on the lots in the township of Sherwood which are included in the letters patent issued to the several defendants (the free grant settlers), inclusive of the fallen pine trees and parts of pine trees cut by the plaintiffs (the license holders) on the lots in the course of the cutting and removal of pine timber, and left on the lots; subject to the rights of the several defendants (the free grant settlers) (1) to cut and use such pine trees and parts of pine trees on the lots as may be necessary for the purpose of buildings and fences on the lots; and (2) to cut and dispose of such pine trees and parts of pine trees which require to be removed by the several defendants (the free grant settlers) in the actual clearing of their lots for cultivation; but subject to the condition that no pine trees or parts of pine trees except for the necessary buildings and fences shall be cut beyond the limit of such actual clearing.

(2) And this court doth order and adjudge that it shall be referred to the Local Master at Pembroke to take all necessary accounts and make all necessary inquiries and report the pine trees and parts of pine trees which have been cut and removed by the several defendants (the free grant settlers) from the several lots, and the lumber and other product thereof, and the proportion which was necessary for the purpose of buildings and fences or which was required to be removed in the course of the actual clearing of the land for cultivation.

(3) And this court doth further order and adjudge that the injunction restraining the defendants (the free grant settlers) from cutting or removing any pine timber or trees, or parts of pine trees, growing, standing or being on the several lots, and from selling, offering for sale, dealing with or disposing of any of the pine lumber, lath, shingles or other product of the logs cut and removed by the defendants (the free grant settlers) from the lots, except the proportion thereof which has been manufactured from logs cut and removed in good faith for necessary buildings and fences or in the course of actual clearing of the land for cultivation—be and the same is hereby continued.

The reference under this judgment was proceeded with at Pembroke, and the value of the lumber and other product from the logs which were wrongfully cut and removed in violation of the principles of ownership declared by this judgment, was arrived at and ascertained. This lumber and other product which had been wrongfully cut and removed, belong to the plaintiff, and he might under the judgment have taken possession of it and removed it, but at that stage a settlement was arrived at between the license holder and the free grant settlers, and he sold the lumber to them at a valuation.

We publish this judgment because it establishes on clear and definite principles the lawful rights between the license holders and the free grant settlers, and proves that no one can get any title to pine trees or parts of pine trees cut and removed in violation of the rights of a license holder, and that no one can ever get any title to lumber or other product of the logs wrongfully taken or removed. The logs, and all the lumber and other product from them, belong in law to the license holder, and he is not even liable to compensate a free grant settler or any other person for the wrongful cutting and removal of logs or the manufacture of them into lumber. The lumber and product belong to the license holder wherever they can be found, and if they cannot be found the person wrongfully cutting and removing them is liable to pay the value of them.

In this case the defendants were Polish settlers, and two of them had sawmills in full operation, and were more timber and lumber dealers than free grant settlers, but having become good British subjects they have been obedient to the law and have bought and paid for the lumber from the logs which they had wrongfully taken from the license holder.

A petition for reciprocal demurrage was introduced before the Railway Commission at Winnipeg on behalf of the local government by Attorney-General Campbell. The petition asked that the railway companies in Manitoba be required to pay a demurrage in all cases where they fail to furnish cars within one week after being ordered, the demurrage to be at the same rate as is charged when a car is not loaded or unloaded in a given time. The case was laid over for argument.

Publications and Reports.

A pamphlet entitled "Forestry, the New Profession, and its Openings for Young Men," written by Robert B. Miller, M.F., head of the new forestry department of the University of New Brunswick, has just been published by the university, which has favored the "Canada Lumberman" with a copy. The pamphlet is quite brief and states in a forcible manner the arguments in favor of the adoption of this profession by young men.

A practical and convenient handbook which should prove invaluable to woodsmen has just been published by Harvard University. The author, Professor Austin Cary, is an experienced woodsman himself, and he has brought together in this book the information which he found most useful in his work. The best quality of canvas has been used for the binding with a folding flap to protect the edges of the pages. The book contains a mass of useful information in the shape of tables, diagrams, etc., together with a clear statement of the methods employed and the principles involved in the survey and valuation of logs, standing timber and forest land. Land surveyors, scalers, cruisers, and others will find in it information which they need to have with them when at work in the woods. Students of forestry in schools and colleges will find the book particularly valuable for its clear, practical descriptions of the best methods now in use. Although much of the material is general and may be applied anywhere, all the special problems taken up are, as the title indicates, those of the region north of Maryland and east of the Dakotas, including Canada. The work is divided into five parts, which deal with land surveying, map making, log measurement, estimating standing timber, etc.

The first figures of the inventory of the forests of the United States which the National Conservation Commission has made were presented to the conference recently by Senator Reed Smoot, of Utah, chairman of the section of forests of the commission.

The report in part is as follows.

The forests of the United States now cover 550,000,000 acres, or about one-fourth of the country. The original forests covered not less than 850,000,000 acres, or nearly one-half. Forests publicly owned cover one-fourth of the total forest area, and contain one-fifth of all timber standing. Forests privately owned cover three-fourths of the area and contain four-fifths of the standing timber. The timber privately owned is not only four times that publicly owned, but it is generally more valuable. The yearly growth of wood does not average more than twelve cubic feet per acre. This gives a total yearly growth of less than 7,000,000,000 cubic feet. There is taken yearly, including waste in logging and in manufacture, 23,000,000,000 cubic feet of wood from the forests.

The consumption each year includes 100,000,000 cords of firewood, 40,000,000,000 feet of lumber, more than 1,000,000,000 posts, poles and fence rails, 118,000,000 hewn ties, 150,000,000,000 staves, over 133,000,000 sets of heading, nearly 500,000,000 barrel hoops, 3,000,000 cords of native pulpwood, 165,000,000 cubic feet of round mine timbers, and 125,000,000 cords of wood for distillation. Only 320 feet of lumber are used for each 1,000 feet which stood in the forest.

The lumber cut has increased less than 15 per cent. in the last seven years. But the average price of all kinds of lumber at the mill has risen 49 per cent., and the rise will continue.

Trade Enquiries.

The Dominion Government Trade and Commerce reports contain the following trade enquiries. Readers of the "Canada Lumberman" may obtain the names of enquirers by writing us, enclosing stamped envelope and stating number of enquiry:

50 Staves.—A north of England firm dealing largely in sundries and supplies used in the fishing trades, asks for lowest c.i.f. prices to Hull or Manchester from Canadian shippers of staves suitable for herring barrels.

65. Wood pulp.—An Italian firm claiming to have a good connection among paper manufacturers wishes to secure the agency of Canadian manufacturers of wood pulp.

81. Newspaper.—A South African firm of wholesale suppliers to printers desire to be placed in communication with Canadian exporters of newspaper, white and tinted, in reams.

89. Plywood.—A firm of manufacturers are buyers of plywood for trouser stretchers and desire prices for c.i.f. shipments to Manchester (500 boards at a time). Sizes: 28-inch x 28-inch x 9-16-inch thick; the latter divided into five equal plys, the outside ply being both of oak or one oak and the other birch.

109. Lumber. A London firm is desirous of being placed in communication with Canadian lumber exporters.

The Northern Electric & Manufacturing Company, Limited, have been awarded the contract for a Western Electric 260 k.w., 2,200-volt, 60-cycle, polyphase alternator and switchboard for the town of Macleod, Alberta.

THE WOODWORKER

Better Designing Needed in Wood-working Machinery.

Manufacturers of machinery will tell you that every machine they make is modern and up-to-date in every detail, yet the very parts of these tools that should be handy to the operator and of easy and rapid manipulation are not given enough consideration in the designing, says R. Johnson in "Wood Craft." I am now referring to woodworking tools and machinery. One maker gives as his reason: "This class of tools must be made very cheaply, consequently every additional detail that is not required adds to the cost of manufacture." True. But why should this be the rule when designing and making woodworking tools and just the opposite when making ironworking tools?

We have in the shop one of the best band saws that money can buy, yet the belt shifter on this machine has in the past two years been the cause of more profanity than all the other tools put together. It is almost impossible to move this shifter back and forth, and the reason for this condition is "faulty design." There is no provision whatever for oiling the sliding rod as the bracket that carries this rod is located directly under the centre of the small table.

After struggling with this shifter two years the boss finally concluded to drill through the table and slide bracket and insert a piece of

him try just a little on it and learn what a big difference it makes. I have provided a self-oiling device which is simple yet it answers the purpose. I fitted a wood block under the sliding rods and in it bored holes which I filled with waste saturated with oil; this block was made fast to the bottom of the bench so that the oily waste pressed up against the bottom of rods. In this way the rods were lubricated and yet the oil did not come in contact with the work held in the vise. This lubricating feature can be put on by the manufacturer without adding one penny to the cost.

The Term "Mill Run" a Misnomer.

The term mill run as applied to cooperage stock, which has been the subject of quite a lot of discussion at the slack cooperage association meetings, is really in this day and time a misfit, a misnomer or whatever term you want to call that which is out of date and should have passed away with the history of bygone days. The origin of the term in the lumber industry came years ago when nothing but good timber was used, nothing really but the cream of the forest. To make what was then considered a good clean up in the disposition of the product of the tree, sales were frequently made to include along with the clear stock whatever defective pieces were found in the same logs, provided they were good enough to be useful. In other words, the manufacturer liked to have the consumer take, when he could, the run of the logs in stock, so that he could simply sort out the worst part and ship the balance without grading out the absolutely clear stock. The cooper would take a lot of mill run stock, use the clearest of it for high grade barrels and that which was sorted out, as not being quite up to the standard, would be used for lime and cement barrels, apple and produce barrels, etc., where it was not necessary to have the same high order of quality as flour and sugar.

At that time the term log run was a fit one, and not only that, but it harmonized with early business methods. They made contracts in those days off-hand, or rather in an open-handed manner, and what might be termed close business practice was never thought of. There was no sharp pencil figuring, no trimming of small margins, no sand papering of spare ribs to get a little meat, and everything was done on broad, liberal lines and it was through this method of business that only the cream of the forest was used for lumber, and mill run stock was both practical and fitting.

Time has brought changes; changes in both the timber supply and the method of doing business. There is timber used for slack staves now that would not have been thought of 20 years ago, and some stock that is now classed as mill run would have been classed as culls by some of the old timers. The scarcity of timber alone, to say nothing of the multiplicity of defects in the scrap leavings from which lots of cooperage stock is made, is enough to make necessary the doing away with of the general term "mill run," and the introduction of accurate specifications of grades so that there need be no room for misunderstanding.

But this is not the only factor which argues for the discontinuance of the term mill run. Business methods themselves have changed so that people figure more closely now and look after small things that were never thought of in the earlier days, that would have been even considered picayunish, but the tendency to look after and take advantage of the little details connected with business makes it necessary to have specifications now covering the stock complete in all its small details to avoid leaving openings for unscrupulous people to take advantage of or to avoid misunderstandings between people who are scrupulous enough to look at matters in a different light.

The difficulty of defining mill run stock furnishes evidence of the impracticability of it, but it doesn't matter, even if the trade should get to the point of specifying how much No. 1 and how much No. 2 should be included in the mill run and the culls to be thrown out, there is so much difference in timber and the manner of cutting it that the mill run stock from one lot may look worse than No. 2 from another, while that from some other may look almost as good as some in No. 1. So apparently the only thing to do to avoid trouble is to set forth clearly each grade, by whatever name you desire, No. 1, No. 2, No. 3. It might be said that the term mill run could be perpetuated and used to designate a grade, but there is an objection to it in that the term itself would likely be more or less misleading, no matter how clearly specifications are set forth, because it naturally suggests everything made in the mill.

Then, entirely aside from the matter of indefiniteness, and the confusion attached to the term mill run, it carries with it the perpetual temptation for the mill man to take out the high grade stock and then sell the balance as mill run. This applies to both lumber and cooperage stock, and while in the lumber world there is still some business done in what is termed log or mill run stock it is frequently so unsatisfactory that the chances are decidedly in favor of the term either being aban-

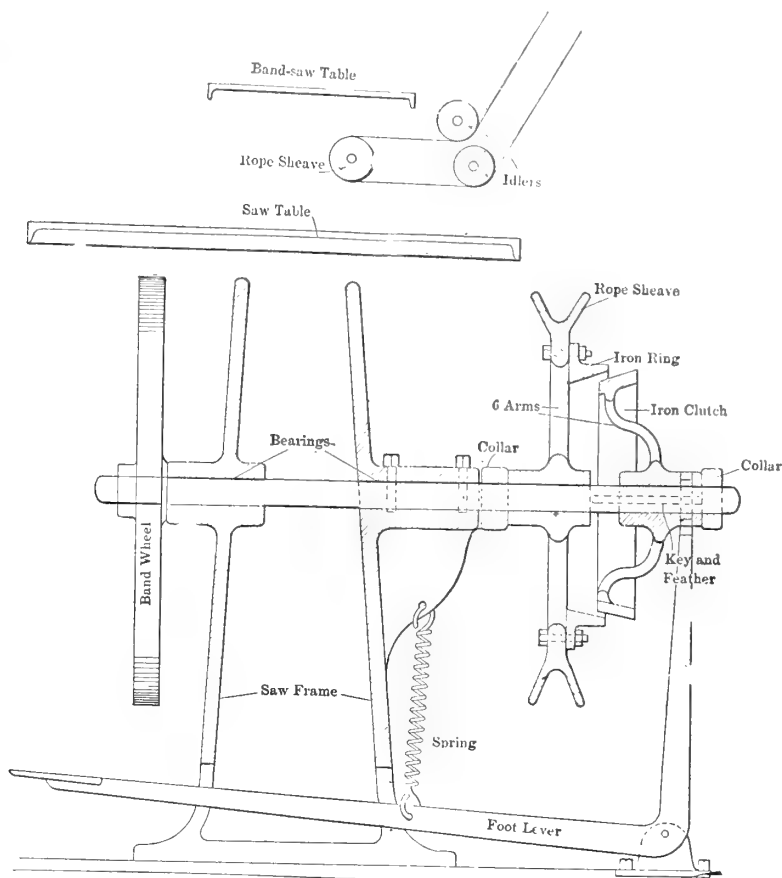

Diagram and Details of a Rope Drive for the Band-saw.

brass tubing through which the oil is fed to the sliding or shifting rod. But why should this be left to the purchaser to attend to? To my way of thinking this should be one of the important details in the designing.

In this one department are employed eleven workmen. There is not a moment in the day that this saw is not being used by some one of these men.

Now, let us suppose that the belt-shifter was designed to be operated by power instead of by hand and that the designer neglected to provide a means for oiling the sliding parts, would there not a mighty howl go up about the designer or maker of the machine?

No change that I know of has been made in the belt drive in the last thirty years. Of what use is a wide space between saw and frame if the belt runs either vertically or at an angle in the path of the work at the back of the saw?

Herewith is a sketch of a band saw which was supplied with a rope drive and friction clutch and has been in constant use for seven years. This change was made by the proprietor of a shop in Chicago and at a very small cost. The rope is out of the way and the clutch is operated by a foot-lever.

Another tool that is often overlooked by the workman in this respect is the vise—either wood or metal worker's. I have one of these modern woodworker's vises which has two round rods sliding in four lugs secured to the bottom of the bench. If the reader has never oiled his vise, let

done entirely or discontinued by a part of the trade at least. To get an idea of how it works in the lumber world, one of the most prominent box manufacturers in the country when offered mill run stock said he would prefer buying straight No. 1 common. When it was suggested to him that by buying the mill run stock he had the chance to get some high grade stock that would cost him lots of money, if bought on grade, he said, yes, he would get a little of it but only a very little, and on the other hand he would have to take in such a large percentage of No. 2 and other low grade stock and there would really be no gain. Anyway, his business required a certain grade of lumber and the only way to get that grade was to buy it, and it didn't pay to buy some other grade that didn't fit his work, even though he could get it cheaper. This is the way it is when it comes to slack staves. When a man has a specified kind of barrel to make it requires specified stuff to make that barrel, and it is a matter of buying a pig in a poke and then not being sure of anything but the squeal. What the trade seems to need more of is thoroughly specified grades to eliminate misunderstandings and to furnish positive bases for prices, and then there won't be so much need for all this argument about what should and should not constitute mill run stock.

When the jointer knows his stock is mill run he doesn't take so much pains with it and then, in the end, they pick out some of the best No. 1 when it gets to the cooper, but it will frequently be found so poorly jointed that it will have to be re-jointed before it can be used for flour barrels, and this adds materially to the expense. There is very little excuse for poor jointing, but it is a well known fact that jointers will not take as much pains with low grade staves as they will with the high grade ones and, if staves are carefully sorted as to grades instead of being bunched together in mill run, the jointer will be inspired thereby to at least take more pains with the jointing of the No. 1 stock and, if he is going to shirk his duty, he will do it on the lower grades. To sum the whole thing up in a nutshell, it looks as if there is really not much advantage in buying or selling mill run stock and not much to be gained in keeping the term "mill run" in use, and inasmuch as it furnishes a bone of contention, it looks as if it might be a good idea to eliminate the term entirely and in its place put a straight set of specifications covering definitely the different grades of staves in common use.—Packages.

Planer and Cutter-Head Knives Should be Well Trued.

Harder knives, better grinding and more accurate setting have all had a share in improving the product of the planer and increasing the output. But their effect is slight compared with that of truing the knives while in motion so that each does its full share of the work. Carefully conducted experiments have proved that no matter how accurately the edges may be jointed while at rest, the different knives will always show unequal work when run up to speed. Undoubtedly this is due to distortion under the influence of centrifugal force and to some extent to the lack of even structure of the material. It can only be overcome by truing the knives while running, so that allowance is made for distortion. Experience shows that when the knives are trued in this way the rate of feed may be considerably increased and that the finish is finer and more even. Logically it makes possible the maintenance of the same or better grade of finish at from 50 to 100 per cent. higher feed.

You buy the best planer. You give it floor space, belt it up, provide power and—then what? Do you get out of it every ounce of work, every foot of lumber that it is capable of turning out? Ten to one—experienced manager though you are—there's reserve capacity in the machine that could be gotten out if you only did one thing. And that "one thing" is to set the knives accurately and to keep them trued so perfectly that not every other one or a single one does the burden of the work—but that every one cuts an equal amount of stock. When you have done this you have brought the knife marks two to four times closer at the same feed. And what does this mean?—simply that you can feed faster and get the same finish as you usually get when only one or two knives cut.

The cutter-head sets the pace for the rest of the machine. If only one knife in a four-knife head does practically all or even an undue share of the cutting, it stands to reason that it won't do to feed the stock as fast as though every knife did its duty. But when each knife does its equal share it's up to the machine behind the cutter-head and to the man behind the machine. With accurately set and perfectly jointed knives the stock may be fed faster than most people dream. The first step is to set the knives themselves with the greatest possible accuracy, which can only be done by measuring from the shaft itself. This step is only preliminary to that of truing up the edges while running, refining the work of setting, overcoming possible distortion due to centrifugal force and giving final and absolute accuracy.

Compression couplings that can be attached without keys are convenient for small powers, but for larger sizes of shafting these should be pinned and keyed, thus affording all the convenience of adjustment of the smaller sizes. When made this way they may be easily removed whenever repairs or changes are necessary, a thing that is usually very difficult in the case of a flange coupling.

Improving The Planer.

A short time ago I was employed in a general jobbing shop. From five to ten were employed in this shop nearly all of the time. Everything moved along swimmingly until one day the boss took a job of dressing two sides of one-inch mahogany, about 3,000 feet in all.

After working up about 500 feet, trouble began with the workmen owing to the dust that came from the planer. The trouble was not confined to this shop alone but to the one next door. Something must be done, and that at once, or the workmen would quit. A dust collector was just then out of the question. The next best thing was a hood which was made from sheet metal. This was made the width of the planer, secured to the pressure bar with machine screws and extending back to hinge A and down the sides as indicated by dotted lines. This scheme only served to shoot the dust out from the back of the machine owing to the agitation of the air caused by the revolving cutter-head. To overcome this, an extension was made from hinge A and back 9 inches from the table top, the sides overlapping as shown. The top rounding down about 3½ inches left about 3 inches between top of table and bottom of this rounded edge. Through the top was cut an opening about 6 by 14 inches and in this was fastened a piece of mica such as is used for

The Planer as Equipped for Working Mahogany.

automobile shields; this made it possible to see the work as it came through the planer.

After this hood was put on you could not notice the dust six feet from the planer. When so desired, the back section can be folded up on top of front.—P. Hand, in "Woodcraft."

Hints on Band Saw Work.

Many beginners will be stuck when they are to mark off a pattern for a step-scroll when the band saw kerfs are too fine to get a pencil in. Lay the pattern on the outside pencil marks and then pour a little band saw dust through the fine cuts, remove the pattern and mark with pencil where the dust lies.

When band sawing yellow pine that is full of pitch and which naturally gums up the saw so that it won't cut well, if you will tie a piece of turpentine-saturated waste on a small stick and now and then let it rub the saw your trouble will be over.

In slabbing off the corners of circle work on the band saw before it goes to the shaper, take a piece of stuff, about 2x3 inches, and cut a notch in the centre for the edge of the circle stuff to run in. Clamp on the band saw and push through.

If the man, whether he be the turner or not, who is cutting off the 5x5, 6x6, or 8x8 squares on the band saw for turned tops in lengths of 10 or 12 inches long, will centre them while he has them in his hand, it will save time. To do this, run them with one corner in the slot between the two sides of the table, making but a scratch with the saw; next place another corner in the slot and you have the centre.

In cutting rake brackets, don't tilt the table top, but build a rack to lay the block in. Have it the proper pitch of the roof, then all the cuts can be made O.K.—but not by the tilted table.

Throwing off the belts every night, or at least every Saturday, not only relieves the strain on the belting, but also on the shafting; a rest for both is good.

The death occurred on Feb. 7th, at his residence, of Mr. James H. West, secretary of the Estabrook-Skeele Lumber Company, of Chicago.

Will Seek a Duty against American Lumber.

The Board of Trade of Nelson, B.C., met recently to discuss the necessity for a duty on lumber coming into Canada. The following resolution was unanimously adopted:

"Whereas, the lumber industries of British Columbia and western Canada are still suffering from the unfair competition of rough lumber coming into Canada free of duty; and

"Whereas, railway companies are still placing large orders for lumber on the American side, such railway companies having been heavily subsidized by the Canadian people, of which subsidies British Columbia has to pay her proportion; and

"Whereas, large quantities of lumber are waiting sale and mills are idle, which lumber was produced with protected machinery, and protected supplies; and

"Whereas, the manufacturers of western Canada have to-day in stock as much lumber as they have ever marketed in the best year heretofore experienced, and have increased their manufacturing capacity to such an extent that they are now able to supply a market at least three times greater in any one year than sold in the best year so far experienced, viz., 1906; and

"Whereas Hon. Mr. Fielding assured the lumber manufacturers of this district some years ago that the dumping clause would give us ample protection from American labor; which is not the case for the reason that during the past 18 months the American markets have been so demoralized that their mills have been selling lumber for less than two-thirds of its cost, and consequently exporters to Canada are willing to make affidavits that the price at which they are dumping lumber into this country is the "fair market value if sold for home consumption"; and

"Whereas, owing to the excessive capacity to produce lumber it is important to preserve to Canadian mills our entire market; and

"Whereas, the produce of the mountain mills is from 75 to 85 per cent. of common lumber the unfairness should be manifest of allowing American mills to dump into Canada their surplus low grade material, which represents by far the larger portion of our output; and

"Whereas, the most vital industry in the welfare of this province is the only great industry on the American continent which is not afforded reasonable protection, and as there seems to be no just grounds to continue to sacrifice our interest:

"It is therefore resolved, that the Dominion Government be urged to give this matter prompt investigation for the purpose of verifying the claims advanced in this petition, and to place a duty of \$2 per thousand on rough fir, cedar, spruce, larch and pine lumber and of 30 cents per thousand on shingles at the earliest possible date."

Trade Notes.

The A. J. Burton Saw Company, Limited, of Vancouver, B.C., report several good orders of recent date, amongst them a complete outfit of belting, comprising the Balata waterproof leather and rubber belting, also a large quantity of link belting for conveyor sprockets for the entire re-equipment of the Revelstoke Company's plant at Revelstoke; complete outfit of 20-inch conveyor chains and of band resaws, gang saws, slasher saws and trimmer saws to the Arrow Lakes Lumber Company, at Arrow Head, B.C.; a complete new outfit of 24 shingle saws to Woods & Spicer, Vancouver; the same to the Erie Shingle Mill, of Blain, Wash.; and a smaller supply to Robert McNair Shingle Company, Vancouver; the Hastings Shingle Manufacturing Company, for their No. 2 mill, Vancouver, and the full equipment of shingle saws for two Simplex shingle machines installed at the Cedar Cove Lumber Company's plant just east of Vancouver, B.C. The latter company has been purchased by Mr. T. T. Gadd from its former owners, Messrs. T. F. Paterson and associates.

Fred Wood & Son, of 162 Adelaide street west, Toronto, are well known as manufacturers of saws and planer knives. Mr. Wood has a wide acquaintance in the saw trade. He was for many years foreman for the James Robertson Company, Toronto and Montreal, and also occupied a similar position with the Canada Saw Company, Montreal.

The DuBois Iron Works, DuBois, Pa., have issued a new 1909 catalogue of their gas engines and producer plants. The catalogue is attractively prepared and well illustrated. It will prove useful to those interested in this class of product.

"Money is so easy now," says a Montreal paper, "that bankers are beginning to protest when brokers pay off their loans.

"The other day a broker paid off a large loan with a bank, and the banker called him up over the 'phone:

"'Why are you paying us off?' asked the banker.

"'Because I don't need the money,' replied the broker.

"'Well, keep our money and pay off somebody else,' said the banker.'"

A wealthy syndicate has decided to spend half a million dollars on a lumber mill on Esquimaux Harbor. Property has been secured to the value of \$300,000. It is said that the mill will employ 300 hands.

Simplifying the Inventory.

In a recent address at Detroit upon "The Inventory," Mr. F. D. Jenks said: "The word inventory means to find out, to make a list, in other words, to make a detailed statement of property to determine its value. The value of any property may be placed at its cost price, its selling price, or its worth to the owner for a particular purpose, but in our business our stock in trade is on sale every business day of the year and therefore its value is what we can get for it. If this is conceded it follows that the starting point in an inventory of merchandise is the selling price, not necessarily the asking price in every instance, but in the case of some lots of stock the price will have to be made in order to sell it. The inventory, then, being made up on this basis is a true and correct statement of the selling value of the stock at the time it is taken.

"I think we have all graduated from the practice that was current in the days of cheap lumber, of adding so much a thousand to our cost price to make the selling price, and have joined other successful merchants by the adoption of the percentage plan, and have now a certain per cent. that we must average on our stock to cover cost of handling, rent, interest and other expenses, as well as our expected profit. As, of course, this percentage varies in different places under different conditions of conducting the business, we will assume for the purpose of easy figuring that we have found 25 per cent. to be the amount above cost that we must obtain. Therefore, if we take the selling value inventory and deduct therefrom 20 per cent. the balance will be the true cash value of our stock at the time taken and the amount that determines our actual profit or loss.

"This method is simpler and quicker than others, as we all know what our stock will bring, while it is often a difficult question to determine the cost of some lots from invoices, if the price has varied in each purchase, and its accuracy and fairness can not, I think, be questioned. In case of loss by fire this basis gives at once the true cash value and simplifies much the making up of proofs of loss. This, of course, applies to our stock of merchandise only, and in regard to sheds, horses, wagons, etc., it is probably best to deduct from cost a percentage based upon the condition and probable life of usefulness.

"It might be suggested against this plan that our stock on hand should be charged a certain amount of unloading and piling, rent, interest, insurance, etc., but as these are regular costs of doing business and with most of us our stock does not vary materially in value at inventory time from year to year, these items may well be eliminated. If, as some do, we figure a different percentage on different classes of stock, this method will still give the fairest results by merely dividing the inventory into groups and figuring each at its own percentage.

"I do not see why we should be bound by our invoices at inventory time, as I think we are entitled to show as a profit at the end of the year any increase of value on our stock in our local market as well as the result of careful and profitable purchases, and, on the other hand, if our market goes against us, or our purchases have not been wise, or we have had to take on some emergency stock at an unprofitable figure, it seems to me that we should not delude ourselves, but should at inventory time mark off our loss and hope for "better luck next time."

Canadian Talc Deposits May Be Developed.

Talc is imported into Canada in extensive quantities for various purposes. A chief use is that in connection with the manufacture of paper. It is used to add strength and weight. Other uses are in connection with chalkstone, china, clay, sulphate of lime, talcum powder, whiting, etc. A deposit of talc in Canada was found some time ago which, according to the analysis obtained, is of excellent quality. It has not yet been placed on the market, though preparations to this end are being made. According to returns from the Customs Department the importations of talc and its products for one month are valued at about \$7,000. There should therefore be a fair inducement for the development of the Canadian product, as Canadian paper manufacturers and others would surely give preference to a Canadian product which is equal in quality to the imported.

Lumber Convention at Calgary, March 23.

A date has been fixed for the proposed convention of those who are interested in lumber business in Western Canada which is to be held in Calgary. March 23rd has been selected, and it is expected that the convention will be attended by representatives of the lumber industry from Port Arthur to the Pacific Coast. All sorts of questions will be brought up for discussion. Among the interesting subjects, which will be taken up, are those of trade ethics, car supply, the requirements of the coming season, freight rates, etc.

The tariff committee of the Canadian Manufacturers' Association will urge the Dominion Government to impose an import duty of \$2 a thousand on certain specified grades of rough lumber similar to those produced in British Columbia. Mr. Charles S. Meek, a well known Toronto man who is on a visit to the coast, is authority for this statement and says further that continued exemption of duty of certain hardwoods used in the manufacture of carriages will also be sought.

CAMP DEPARTMENT

The Elaborate Duties of the Camp Cook.

Within ten or fifteen years the camp fare furnished hands in the logging operations of the old pine states has notably improved, says the "American Lumberman." Time was when salt pork, salt beef, beans, potatoes, bread, coffee and tea were considered a sufficiently elaborate menu for the camp. As years passed a change was gradually evolved in this particular. The increase of operations, the rising wealth of lumbermen, the competition between operators to secure sufficient crews, the clamor of the men for better board, combined gradually to improve the bill of fare at camp tables.

The motives that actuate operators in general in making up their food supplies for the camps are well expressed by a leading operator. He says: "We find it necessary to take good care of our employees in the woods, as in that way we secure the better class of help and less of the floating population. We find that it costs about \$3 a week for each man for supplies furnished the cook's shanty, and we can not expect to get good results from our men unless we take care of them. I am unable to call to mind many articles we do not use, but you will see by the accompanying list that we do not use any mutton, chickens, turkeys or fresh tropical fruits. These we would consider a little too expensive. In taking meals at these camps I have noted with curiosity the fact that there are always several kinds of bread and cake on the table, and generally pie twice a day. I have not attempted to make a bill of fare, but one can judge as to what such fare could be made by the skillful use of the articles in the following list:

Meats.

Bacon.	Fresh pork.	Salt codfish.
Smoked ham.	Salt beef.	Fresh fish.
Fresh beef.	Salt pork.	Eggs.
Oysters on Christmas.		

Other Supplies.

Granulated sugar.	Canned corn.	Cabbage.
"C" sugar.	Canned lima beans.	Parsnips.
Baking powder.	Canned peas.	'Bagas.
Lard.	Cheese.	Green corn.
Coffee.	Pickles.	Evaporated apples.
Beans.	Potatoes.	Dried peaches.
Canned tomatoes.	Beets.	Dried prunes.
Dried apricots.	Flour for bread.	Crackers.
Raisins.	Flour for pastry.	Extract of vanilla.
English currants.	Buckwheat flour.	Extract of lemon.
Canned apples.	Graham flour.	Corn starch.
Canned pumpkin.	Bolted meal.	Mincemeat.
Jelly.	Rolled oats.	Catsup.
Canned string beans.	Rice.	Onions.
New Orleans molasses.		Nutmegs and all kinds of seasonings.
Oleomargarine.		Dried peas for soup.

This is a list of food goods elaborate enough with which to start a grocery and provision store. A lumberjack who would complain of a bill of fare made up of so many and such a variety of edibles would kick at the menu of a first-class hotel. The life of the camp hand is one that induces a keen and enormous appetite, and a digestion that would successfully tackle a bootleg steak. The task of feeding such a gastronomical capacity with a toothsome list like the foregoing would be a herculean one.

Queer Frequenters of the Tote Road,

Woodsmen in the forest regions disappear "over the edge of things" into the big north woods during a long and cold winter, and most of the world forgets them. There are some folks, however, who make thoroughfares of the "tote roads" between the scattered camps. "In one camp I was in last winter," says Holman Day, author of "King Spruce," "there was hardly a day when we didn't have a visitor. There were men with watches and cheap jewelry. There were photographers to take group pictures of the crew—and one would be surprised to know how eagerly the men welcome photographers. There were men who doctored horses and filed their teeth. There were peddlers of all kinds of trinkets—and these always drive good trades, for all payments are made in orders on the firm, and that doesn't seem like spending real money.

"One day an old man came into camp, avant-courier of one of the biggest snowstorms of the season. He stayed a week, snowbound. He announced himself as an evangelist and held services every evening in the cookhouse. As he sang hymns with a deal of gusto the men tended out on the meetings, and when the week was up contributed a liberal collection. They were encouraged in this by the boss, who had discovered that

the old man was as good an eater as he was singer—and hospitality is without price in lumber camps. The boss reckoned that a good fistful of cash would encourage the old man to move on—and the boss cashed the men's orders and passed the money over. Thereupon the delighted preacher, wishing to show his gratitude and earn the money, said that it had been revealed to him that he ought to stay another week and make a still more earnest try for the souls of men who had been so good to him. Then the boss could only sigh and let him stay."

The Supper Horn in Camp.

When it comes to likin' music, then I figure in my breast
Thet I've got a soul fer music thet's as soulful as the rest.
I appreciate a fiddle tunin' up on "Money Musk,"
Fer it brings a smell of perfume floatin' softly in the dusk.
I kin even git some pleasure from a Swede's accordion
In the han's of a performer like our Ole Peterson.
But for music, purty music, ever heard since I was born
There is nothin' quite as tuneful as that good, old supper horn.

Susie's ban' may be a dandy, beat ail other ban's a block,
But there isn't any ditty in the whole of Susie's stock
Like thet trumpet call to supper windin' gladly up the hills,
Like that merry invitation for the men to feed their gills.
Not an artist with a trombone ner no fellah with cornet
Ever gurgled any music thet was equal to it yet,
Thet was equal to the music from that old, tin trumpet torn
By the sour-dough jest at twilight when he toots the supper horn.

It is busted an' it's battered, it is twisted an' it's bent,
But he blows a fine selection on that simple instrument.
Other men with flutes er fiddles bring you visions from the sky,
Angel ban's together singin', soldiers brave a-marchin' by,
But the cook he plays his solo an' you know jest what he means—
Brings you thoughts of steamin' coffee, brings you visions then of beans,
Bread an' pie an' cake an' sinkers, fried potatoes, stews of corn,
Are the visions he awakens with that rusty supper horn.

I kin live without the music thet great Susie makes to come
From a battery of bugles an' the trombones an' the drum,
I kin live without the fiddles scrapin' dances square an' round,
But I'd hate to think I'd never hear ag'in that pleasant sound
When the cook upon the doorstep puts that trumpet to his lip
An' from that piece of tinware lets his pleasant message slip.
I fergit about my troubles an' my heart's no more forlorn
When I hear the cook start tootin' on his blessed supper horn.

—"The American Lumberman."

The Language of the Forest.

The language of the forest—not as the term is usually construed, however—was heard in all its native complexity at a Michigan hospital the other day when a lumberjack toploader painfully explained how it happened that he was laid up with a broken leg. After it had been set and the patient made reasonably comfortable, one of the nurses attempted to get an account of the accident for a waiting newspaper man. The big woodsman was ready to be "interviewed," but the nurse with a puzzled expression informed the reporter that he would have to get the account first-hand, and this is the way the lumberjack put it:

"You see, mister, I'm what they call a 'sky-hooker.' Well, we were shy a grounder that morning, when a gazaboo blew up the tote road from somewhere, and the main squeeze hired him on the representation that impersonatin' a grounder was his long suit. Well, the first thing he sent up to me was a blue butt, and I yelled back at him to throw her a Saginaw, and instead of that he gave her a liner, and she came up and caught my stef and snapped it just as you see it, and here I be."

"I—I don't quite understand—" began the reporter.

"Neither do I," exclaimed the woodsman, eagerly, "a geezer with no more judgment than that must be either bughouse or has bats in his belfry."

The Canadian Manufacturers' Association, at the request of the National Union of Conservative and Constitutional Associations (London), will make a collection of photographs showing the methods of producing, packing and forwarding domestic articles suitable for consumption in the United Kingdom, the object being to prepare lantern slides and show by means of comparisons that Canada under a preferential tariff can supply better articles than those from Germany.

WANTED & FOR SALE DEPARTMENT

PUBLISHERS' NOTICE

Advertisements other than "Employment Wanted" will be inserted in this department at the rate of 15 cents per line each insertion, on the basis of 14 lines to an inch, payable in advance. When four or more consecutive insertions are ordered a discount of 25 per cent. will be allowed.

Advertisements of "Employment Wanted" will be inserted at the rate of one cent a word, net. Cash must accompany order.

Advertisements must be received not later than the 10th and 26th of each month to insure insertion in the subsequent issue.

7,000 ACRES OF DEEDED LAND FOR
sale in N.B. on the line of the
C.P.R., six miles from a prosperous town, on it there
is over 30,000,000 feet of standing, mixed, timber
consisting of Maple, Birch, Ash, Spruce and Hem-
lock. The land will make good farms when the
timber is cut-off. This is a splendid opportunity for
the right man as the price is exceedingly reasonable,
or the formation of a company to operate the prop-
erty would be considered. MARK ARMSTRONG, Mark-
dale, Ont.

For Sale

OVER 1000 ACRES OF TIMBER LAND,
with about 100 acres of clearing on all lots,
and some buildings, and lots of cedar, hemlock,
birch, maple, oak, pine, and other merchantable
timber, including a good mill site on Thessalon
river close to a railway with good shipping facilities.
Lots all patented and most cover the mining rights.
Splendid chance to move a good saw-mill, as other
timber can be had also. Price only \$3,000. Apply
to P.O. Box 100 Bruce Mines, Ont.

Saw Mill and Billion and a Half Feet Timber Limits For Sale

TO CLOSE AN ESTATE A COMPLETE
sawmill plant and timber limits are offered for
sale. Situated on Pacific Coast, British Columbia.
Limits estimated to contain one and a half billion
feet of red and yellow cedar, spruce, fir, larch and
hemlock, all within 3 miles of tide water. Plant
consists of saw and planing mills, dry kilns, box
and sash and door factories, etc., large vessels can
load direct from yard. For price and terms address
—F. E. LEUSHNER, 75 Yonge St., Toronto, Ontario.

Engleman Spruce

Engleman spruce is a compara-
tively small tree of rather slow
growth whose range is on the high
slopes of the interior mountain sys-
tem from British Columbia south-
ward to Arizona and New Mexico.
Within this range it is used to some
extent for lumber, mining timbers,
ties and general construction, but
it has not been considered a very
valuable lumber tree, and it is em-
ployed only because of lack of bet-
ter material. No estimate of the
total amount of standing timber is
available, but reports of stands
show more than one and one-half
billion board feet as occurring on
four of the National Forests, and
this is probably only a small part
of the actual quantity standing.
Throughout its entire range there
is much material in the form of
dead and mature timber.

The existence of such quantities
of a wood of seemingly little value
has induced the United States For-
est Service to undertake experi-
ments to determine whether this
wood can be used for making paper

pulp. Samples have been received
from the National Forests of Wy-
oming, Colorado and Utah. These
have been treated by the sulphite
process, and a pulp has been ob-
tained which, unbleached, is in
color nearly as good as pulp made
from Eastern spruce under similar
conditions, and in strength clean-
liness, and other qualities seems to
be fully as good. The results of
preliminary trials on seasoned wood
show that it cooks without difficulty
and gives a yield of fibre nearly
equal in volume to that from its
eastern relative. The amount of
screenings is very small, being be-
tween two and three per cent.
Tests made on the fibre show that
it bleaches quite easily, the amount
of bleach varying with different
cooks, but in general it may be said
to require about the same quanti-
ties as fibre produced from eastern
spruce.

A few cooks have been made on
green wood, cooked within two
months of the time the trees were
cut, and the indications are that it
will require a little higher tem-
perature than the seasoned wood.
The fibre produced from green
wood, however, seems to be fully
equal to that from seasoned wood,
and is superior to it in color.

The fibre of Engelman spruce
seems to be slightly shorter than
that from eastern spruce, but is of
sufficient length to be used for the
latter in nearly all of the manu-
factured products, and there is ap-
parently no reason why it should
not be so used, provided the other
conditions of manufacture and
transportation are favorable.

Exports of Timber

Canadian exports of undressed
timber to Australia during 1907
were valued at \$21,990, against
\$27,970 in 1906 and \$31,355 in
1905. These figures are from the
Australian statistics, which say
that the importations of timber are
almost wholly of undressed Ore-
gon from British Columbia, though
in it are included laths, shingles
and staves. The trade is very
considerably more than is credited
to Canada in the returns, but
nevertheless, the total imports
stated to have come from Canada
in 1907 were not much more than
one-half of the amount which the
Canadian returns showed to have
been exported from Canada in nine
months of the year ending March,

A report of the Government
Trade and Commerce Department
shows that Canada bought only
\$2,000,000 worth of lumber, tim-
ber, planks, boards, etc., from the
United States during the six
months between April and Septem-
ber last. The imports for the cor-
responding period of 1907 amount-
ed to \$5,000,000, and the year be-
fore \$2,500,000. This lumber was
all free of duty, the dutiable lum-
ber amounting to only a few thou-
sand dollars each year.

This Government report shows
also a falling off in the lumber
sales of Canada to the United
States, although the difference is
less. In 1906 the value of planks
and boards sold in the six months
ending with September was \$9,-
000,000; in 1907, \$8,750,000, and
in 1908 \$7,500,000. The next big-
gest item—shingles—fell from \$1,
500,000 in the six months of 1907
to about \$1,330,000 in the six
months ending with September
last. The sales of lath, palings
and pickets dropped from \$1,000,-
000 to \$750,000 last summer.

**Reliable Veterinary Remedies**

No logging outfit is complete without a
supply of reliable veterinary remedies.
Getting the wrong kind means the loss
of the use of your horses when time is
valuable.

Johnson's Veterinary Remedies
are guaranteed never to fail when used
as directed. You get your money back if
they ever do.

They are
Johnson's Horse Liniment No. 1.
A penetrating Alcoholic Liniment.
Put up in one gallon jugs, with full
directions, per imperial gal. \$4.50
Johnson's Horse Liniment No. 2.
A combination of the best oils used
as liniments, imp. gallon . \$3.00
Johnson's Horse Colic Remedy.
A sure and speedy cure for colic
Imperial gallon \$5.00
Johnson's Veterinary Healing Oint-
ment.

Positively the best all-round healing
ointment made. In use by the larg-
est owners of horse flesh in Canada.
Put up in 2 lb tins, each . . \$2.25
or in 1/4 lb tins, per dozen . . \$3.50

Johnson's Condition Powders. (Con-
centrated).

Put up in bulk, per lb . . . 30c.
These goods being put up in bulk are
more economical than others, as cost of
bottling, etc., is saved.

CAMP REMEDIES.

In addition to our Veterinary Rem-
edies we make a line of medicines for lum-
bermen, including a strong, penetrating
liniment, healing ointment, cholera cure,
liver pills, cough syrup, in fact anything
in the form of Camp Drug Supplies. We
know that there are no better remedies
made than those we offer. There may be
others nearly as good, but they lack our
guarantee. Satisfaction or money back.
A trade discount of 10% allowed off all
orders amounting to \$100.

Send postal for printed matter.

Review of Current Trade Conditions

Ontario.

There is so little business being done in lumber in Ontario that it is impossible to mention any important features. With the exception of spruce, prices are unchanged. Spruce mill run is about \$1 higher, selling in car lots at Toronto at from \$18.50 to \$20. This is the result of a better demand from Boston and New York. There is more spruce being used now in Ontario also than formerly. In Toronto it is used more largely in flooring than at any time in its history, having usurped the place of pine for this purpose. There are quite a number of enquiries for various lines, but they result in nothing, as a rule. The cause for this seems to be that retailers are waiting to see how the building season will open. Retail stocks throughout the country are light but are not being replenished. There is apparently no incentive to buy, but there is more than a probability that when the building season does open there will be an unusually brisk trade. In the larger cities and towns in western Ontario, such as Hamilton, Stratford and London, trade is at a standstill. Lath are scarce now, and consequently good prices prevail. No. 1 4-foot pine 1½-inch sells at \$4.25 in Toronto, and No. 1 4-foot hemlock 1½-inch at \$3.50. At Ottawa the indications are that an improvement will soon occur in the market for thin lumber. This will result probably in a smaller cut of deal than was expected. Better conditions seem to be coming into existence in England now and prices of woods which compete with those from Canada are becoming firmer. In fact, one-inch lumber is in better demand from all quarters.

Western Canada.

Vancouver reports state that the shingle market is in fairly good condition. Many of the United States mills have shut down, and will so continue for some time to come. This is causing an improvement in the British Columbia business, as the market there is regulated almost entirely by conditions on the United States side. The XXX shingle is now selling at \$1.85 in the United States and Canadian dealers who buy in British Columbia must pay this price, as Canadian shingles can easily be sold at this figure across the line, and British Columbia mill men cannot make a profit at the prices which formerly prevailed. An indication of the condition of the trade is afforded by the fact that the government scale of logs on the British Columbia coast for the month of January showed 16,833,288 feet. This is a decided falling off as compared with the month previous, and it is expected that a further decrease will have occurred during February. The enquiries for timber are quite numerous, and if the tariff upon lumber going into the United States should be reduced the value of standing timber will be much increased. Many Americans, counting upon a reduction of the tariff, have purchased large tracts with the apparent intention of holding them indefinitely. It is now believed in British Columbia that in spite of the fact that 80 per cent. of the consumers of the United States are in favor of free lumber, the campaign of the manufacturers and the labor unions will result in the duty being retained.

Eastern Canada.

The demand for spruce from New York is quite dull. New York State spruce mills have done very little logging this year on account of bad weather, the condition of the market, however, is quite strong. At Boston the market is still firm and some dealers are asking \$26 for spruce frames, but are not obtaining much business. Sales are more often made at \$25 and some have changed at \$24. The demand for shingles at Boston is inactive. The best spruce extras are held at \$4, but sales

have been made at \$3.90. Clears are quiet at \$3.40 to \$3.50. Lath are in poor demand at \$3.90 to \$4 for 1¼-inch and \$3.50 for 1½-inch. There has been rather an unusual dullness in the lumber trade in New Brunswick during the past fortnight. The quantity of deals being shipped by winter liners is quite light. It is expected that on account of the small stocks of deals and the fact that sawing operations will not commence until late in the spring, better prices will be in vogue by early summer at latest. The winter has been a favorable one for getting out logs, and this condition still prevails. St. John lumbermen have cut very few cedar logs this season. The short season for shingle manufacturing in 1908 resulted in many cedar logs being kept for the winter. St. John dealers are rapidly getting rid of their stocks of short lumber, and cedar shingles have practically disappeared. There are not more than 2,500,000 spruce laths on the St. John wharves. It is almost certain, however, that the best lines of cedar shingles will show no decline in prices. At present they are bringing from \$3 to \$3.10 for dutiable "extras," and \$2.50 to \$2.60 for dutiable "clears." There are indications of a good demand for "second clears" for export. They are selling at present at about \$1.90 to \$2.10.

United States.

There has been a decided improvement in the tone of the lumber market at Chicago. Retail yards and the railroad companies have both increased their enquiries and many orders for rolling stock have been let. Hemlock and white pine are reported scarce and the demand for hemlock and white pine is strong. There is a steady demand for cedar posts at Chicago. The upper grades of hardwoods are in fair demand, particularly red and white oak. Hemlock stocks are badly broken. There is little change in the fir situation. The demand for western spruce continues stiff. Shingles and lath are steady. Cooperage business is very dull. Northern pine at New York is only in light demand, awaiting for an improvement in the building demand. There is much room for improvement in the demand for hardwoods at New York. Hemlock is in fair demand and prices are firm. At Buffalo white pine is reported to be in good demand. Prices are firm and are about \$1 more than they were at this time last year. Hardwoods are in better demand than they were a fortnight ago and it is expected that normal business conditions will soon have returned. Hemlock is falling off a little on account of bad weather conditions, which have delayed building operations.

Great Britain

The lumber trade in London is practically stationary. No improvement in the demand has occurred and buying is almost entirely of a hand to mouth character. Deliveries are still lower than last year, when they were very unsatisfactory. Reports indicate that there is no probability of any improvement in the immediate future. There is a fair amount of f.o.b. business going on, and speculation is to a certain extent still under way. Stocks throughout the country are believed to be much lower than normal. This is the one redeeming feature of the present situation. The market for pine deals continues to drag, although whatever is sold obtains high prices. The supply and the demand both appear to be shrinking at about the same rate. Spruce prices during January were quite firm. The dock stock in London, and the consumptions were decidedly low. Oak, elm, ash and yellow pine have been dull. Birch is in better demand at slightly improved prices. The trade at Liverpool has been quite dull. The demand for spruce shows no change and prices are continuing firm with small arrivals. At Manchester there are few

signs of improvement. The trade at Bristol is about stationary with a quiet demand, although there is a feeling of confidence as to the future. At Southampton there has been a slight improvement recently, enquiries having increased to a small extent. At Glasgow trade has been rather quiet. Imports are very small. A small shipment of spruce deals arrived recently from St. John and were disposed of on ex-quay terms. Prices are very firm, and are not expected to go much higher, as it is believed that large arrivals will shortly be on hand. There is some enquiry for birch planks, both Quebec and Lower Port, as the shippers, in first hands are exhausted. Contracts with Quebec shippers for delivery at Glasgow are growing scarcer, the local firms being content to take their chance of obtaining supplies from consignments.

Market Correspondence

Good Logging Conditions in New Brunswick.

St. John, N.B., Feb. 22.—The week has been productive of little apparent activity in local lumber trade circles in this direction. Shipments of spruce deals by the winter liners have been light, in fact this condition has been singularly true of the entire season. Such a condition is due to the fact that, as it will be quite late in the spring before sawing operations are, generally speaking, under way, local people are in no hurry to hurry their holdings of deals onto the market, preferring apparently to wait in the expectation that the late spring or early summer will be productive of more favorable values than are at present prevalent.

A feature of the industry at present is the continued favorable conditions governing the getting out of the logs. The season has been a remarkable one in this respect. During the yarding season, which ended about Feb. 1st, there was from one and a half to two feet of snow in the most important lumbering sections. Since the finish of the yarding and the beginning of the hauling from off the yards, there has been from a foot or one and a half feet more snow, which makes ideal hauling conditions. The falls of snow have taken place sufficiently far apart to allow the hauling roads to be thoroughly broken out after each fall. The conditions described refer more particularly to the lumbering sections situated along the up-river districts of the St. John, but may be taken as indications of the province in general.

A feature of the logging season is the lightness of the cut of cedar logs for local lumbermen. Owing to the shortness of the shingle manufacturing season of 1908 (due to a protracted strike among the shingle workers) large quantities of cedar logs were wintered by local manufacturers and these wintered stocks will be sufficient, in nearly every case, to provide their owners with raw material throughout the season.

At present writing the two plants of Stetson, Cutler & Company are the only ones running in this section. Few, if any, of the other mills will begin operations before the last week of March or during the first week in April.

The time is rapidly approaching when local dealers and manufacturers will be practically out of the short lumber market until the first of the new stock is ready to be shipped. The local holdings of cedar shingles are practically cleaned up now and the quantity of spruce lath on the local wharves would not total to more than two and one-half millions.

Judging from present indications it will be well on toward the first of May before the first cargo of the highest grades of cedar shingles will be available. The feeling among local people in regard to the market for this line of goods leads to the conclusion that no weakening of prices is looked for; on the contrary it would seem as if the belief is that cedar shingles will at least hold their own during the months of spring. An enquiry for cedar shingles at the present time would no doubt bring quotations of from \$3 to \$3.10 on dutiable "Extras" and \$2.50 to \$2.60 on dutiable "clears," i.e. schooner or cars at St. John.

It is expected that the export business in "2nd clear" cedar shingles will be much greater in volume during the present year than has been the case for a decade. Ten years ago the "2nd clear" would usually figure very prominently in shipments from local mills, but during that period the demand seemed to diminish and die out. Last year there was considerable indication that this phase of the trade would grow and thrive again and it is expected that the present year will bear out these expectations. The present local value of dutiable "2nd clears" is from \$1.90 to \$2.10, with none available for shipment until mid-April.

Freight rates by schooner to United States ports have shown no change, the figures prevalent at present being 60 cents per thousand on lath to New York and 25 cents per thousand on shingles to Boston.

Better Demand for Thin Lumber at Ottawa.

Ottawa, Feb. 26.—The market for thin lumber promises to improve as soon as any change in present trade conditions takes place. Manufacturers are counting therefore upon a continuance of current prices and improved sales. Owners of mills west of Ottawa who earlier this season had decided to cut a large quantity of deal at the expense of thin

lumber, have abandoned this idea and the coming season will witness operations carried on by them in the usual way. J. R. Booth, W. C. Edwards Company and the Hawkesbury Lumber Company, having contracted for the sale of their 1909 cut of deal to British buyers, are obliged to produce a considerable quantity, but the improving signs with regard to other sorts of lumber may have much to do with the course to be pursued by others. If the two dollar per thousand duty on Canadian lumber is abolished by the United States, as is proposed, a large market will be opened for the low grade of pine sawn in the Ottawa valley. During the last year boxboard has been a drag on the market and there is a large quantity being carried over. The existing tariff adds ten per cent. to this lumber when delivered in the United States, and consequently the tax is a great deterrent when the market is dull. Good pine sidings, strips and shorts, ranging in price from \$35 to \$45 per thousand, can better stand the tariff of \$2 per thousand, and manufacturers do not figure on seeing trade in these lines benefit so much by the proposed new arrangement. Ottawa Valley manufacturers find encouragement also in reports from England showing that the prices which come into competition with those of Canada are becoming firmer. Much heavier sales of lumber have been made for local consumption in Montreal than Ottawa dealers were able to make in the corresponding months of January and February last year. J. R. Booth reports the market conditions steady so far as large transactions are concerned. The export to South America is considerably better than last year and from all quarters there is evidence of brisk trade in one-inch lumber.

Lumbering operations on the Lievre River, Que., are being carried on briskly, although more sawn lumber is held over in Buckingham than for many years past. The James MacLaren Company heads the list, taking out about 15,000,000 feet board measure. Shearer, Brown & Wills are taking out 50,000 pieces to be sawn in their mill in Buckingham, and Gillies Bros. have 30,000 logs for W. H. Kelly and 20,000 of their own almost ready for the drive. Repairs are being made on the Government locks at Poupore and the coming season promises to be active on the Lievre. A large quantity of the logs have been delivered by jobbers, whose prices are 10 per cent. lower than last year.

The Upper Ottawa Improvement Company, including most of the Ottawa Valley lumber men, met on Feb. 24th and decided to purchase a new steel tug to operate on Chats Lake. The new tug will replace a wooden one that has been in service many years. To meet the cost of this and other improvements the company will raise debentures for \$80,000 covering 15 years.

Lumber for building in the mining district of Gowganda is costing \$90 per thousand since the closing of a sawmill that had been operating there. The mill, being on a forest reserve of the Ontario Government, was running without a permit and upon being discovered by the authorities an order went forth closing it and declaring that trespassers' dues should be paid on all the timber cut. Since the mill was closed lumber can be brought into the camp only by hauling a distance of 40 miles from the railway. This has practically doubled the cost.

The heaviest snow in many winters is reported from the Temiskaming district. There has not, however, been enough snow to delay operations in the woods and, in fact, lumbermen are glad that generous spring floods are promised. If the water is high the drive can be conducted at a moderate cost and there will be less danger from a repetition of the set-back to manufacture caused by low water in the summer of 1908.

The Ottawa River has risen sufficiently for the last month to supply almost all the needed power for the pulp mills of the E. B. Eddy Company and J. R. Booth. Conditions are better now in this respect than on any previous occasion since August last. J. R. Booth is running two-thirds of his pulp grinders and part of his sawmill making dimension paper.

S. P. Musson, Son & Company, Barbados, report under date of Jan. 30th, as follows:

Lumberstuff.—Arrivals during the fortnight consist of the trn. schooner "Georgeina Roop," with a deckload of 193m. feet white pine, which was sold at \$29 per thousand for merchantable, and \$20.50 per thousand for second quality, and the schooner "Kestrel," from Shelburne, N.S., to selves, with 83m. feet white pine, which we placed at \$29.25 and \$20.75 for merchantage and second quality respectively, and our market is now fairly supplied with this description of lumber. Spruce is still in good supply, and the demand for crop requirements, is at present light owing to the backwardness of the crop. Pitch pine—No arrivals to report, but a cargo which has been sold to arrive is now about due. Shingles—There have been no receipts of any description and stocks of long cedar are getting exhausted, so that next arrivals should do fairly well. Cedar laying are still in fair supply, but there should be some enquiry for these in a short time. Shooks—No receipts, but a cargo of Portland is about due, which, owing to the heavy stocks already in market, will have to be held over until next season. Wood hoops—No arrivals to note, and demand is not brisk, owing to lateness of crop. Lotting rates \$22 per thousand for long, and \$19 per thousand for short.

EDGINGS

Ontario

Oscar Rusk, of Cache Bay, Ont., will shortly erect a sawmill at Sturgeon Falls, Ont.

Tenders addressed to W. H. Elliott, Town Clerk, Fort Frances, Ont., will be received until March 1st for supply of 275 cedar poles.

J. R. Booth is building a power house at the Chaudiere, on the site of the first sawmill burned there fifty years ago. This building is also for a boxwood factory.

An action for recovery of property involving some \$6,000, has been started by Henry Philps, of the Low Lumber Company, Low township, against Oran Elsworth, of the Brockville Lumber Company.

The Parry Sound Furniture Staples Company, Limited, Parry Sound, Ont., will establish a basket and box factory in the district of St. Catharines, Ont. They are now offering for sale 30,000 of their capital stock for the purpose.

The McBurney Lumber Company, with a capital of \$50,000 and head office at Toronto, has been incorporated. The directors are James McBurney, who has been doing business in Collingwood for several years; H. H. Shaver and John Grey.

A large number of logs taken out in the Ottawa Valley by J. R. Booth on the Madawaska River have been brought by train to his sawmill and will be sawn early in the spring. Mr. Booth has nearly a whole season's cut of logs ahead all the time.

There was recently issued an order for the winding up of the Weller-Sills Company, Limited, of Colborne, Ont., formerly of Belleville. The company was incorporated in 1905, to trade in and manufacture all kinds of wood, timber and lumber, with nominal capital of \$20,000.

It is stated that all the machinery is on the ground for the new lumber mill of the Fischer Lumber Company, Wabigoon, Ont., on the line of the Transcontinental Railway near Good Lake. This mill will take the place of a temporary affair, and is expected to be in commission in the early summer.

Thomas Jackson, of Trenton, Ont., was operating a portable saw last month when he became entangled in the runway. Before he could be released his arm was torn off. He was so terribly injured in other ways that he died soon afterwards. He was about fifty years old and leaves a widow and eight children.

The Durham Furniture Company, Flesherton, Ont., have purchased the Rockvale mills and timber limits. The property is situated four miles east of the village, and consists of saw and veneer mills, with stables, shops and houses, nine acres of land, and 800 acres of timber, of which 700 acres are uncultured. The price is said to be \$28,000.

Activity is indicated in the Ottawa Valley. Many logs are being shipped to local mills. From western Ontario or within a distance of about 145 miles the Grand Trunk Railroad is conveying thirty carloads daily, chiefly from the Georgian Bay district, to Booth's mill and will continue to do so until the approach of spring renders work in the bush impossible.

Manley Chew, of Midland, Ont., has been given judgment against Caswell & Company for \$5,962.30. The bank financed Caswell & Company, for whom Chew contracted to saw logs. While the sawn timber was in Chew's yards at Sturgeon Bay it was burned. Chew sued for the work already done. In giving judgment, Mr. Justice Riddell said that it would be an unfortunate result if the bank were to be allowed, by reason of the fire, to take the benefit of plaintiff's work without paying for it.

Eastern Provinces

David M. and David S. Hiltz, New Ross, N.S., have gone into partnership to manufacture lumber.

George Othmer & Sons, of West Derry, are building a new sawmill at Buckingham, Que., to replace the one destroyed by fire a year ago. The new mill will be larger than the old one, with a 50 horse-power boiler to furnish steam to a 30 horse-power engine, providing a sawing capacity of 15,000 feet a day. They expect to begin sawing in May, having acquired a nearby limit well wooded.

The Quebec Government has decided to take stringent measures to prevent undue waste in lumbering. It has decided to levy stumpage dues on all stumps over one foot in height, measuring from the beginning of the roots; all timber above six inches in diameter left in the tops; all merchantable timber used for skids and not hauled; all lodged trees; all merchantable timber used for building bridges or making corduroy roads; all logs left in the woods. A circular has been issued notifying lumbermen of these regulations. The first account for dues imposed for the above causes was recently filed and amounted to \$167.30. This was for one river valley and covered the cutting for fifteen days only.

Murray & Gregory, St. John, N.B., are optimistic regarding spring business. Originally this firm manufactured only rough lumber in their sawmill for export to foreign markets. About three years ago they added to their plant an up-to-date wood working factory. Since then they have added to their office staff a competent architect, and now they have added a department for the manufacture of art glass, bevelled plates, etc. They claim that no firm in New Brunswick is in a better position to supply house building materials than they are as they cut the logs in the forest, prepare plans and furnish all the woodwork for buildings, and their latest department now provides the art glass necessary. They propose still further developments as their trade increases.

Several important lumber deals are reported from Weymouth, N.S. The largest, probably, was that by Emile Stehelin, Jr., who, acting, it is said, for Bridgetown parties, has purchased the extensive holdings of his father, Emile Stehelin, at New France and other sections of the country. The Campbell Lumber Company have purchased a large quantity of pulpwood from the Blackdars, which will be rafted down to their mill as soon as the river opens. G. O. Hankinson, of Weymouth, has purchased the Charles Doucette property, in New Tusket, and the Stehelins have secured the contract for sawing the timber. This, says our correspondent, taken in conjunction with the fact that Dickie & McGrath have had their representatives over almost every foot of the ground between Meteghan and Bear River, would indicate that the lumber market is looking up and that the operators are leaving no stone unturned in the way of securing new holdings.

Western Canada

The Faust Lumber Company, of Moose Jaw, Sask., have purchased the Independent Lumber Company's business at Regina and 24 branch yards, which gives them control of a large part of the lumber business of the province.

One hundred and forty thousand acres of timber land were disposed of last month by an English syndicate to Vancouver capitalists for a figure in the vicinity of \$800,000. The plans are for the erection of pulpwood and sawmills on the property situated on the east coast of Vancouver Island, one hundred miles north of Vancouver.

An important convention is to be held in Calgary this month. Representatives of the leading firms from the Atlantic to the Pacific are expected to be present. It will be one of the most important gatherings of those interested in lumber ever held in Canada, and the occasion will undoubtedly be seized upon to discuss all matters of general interest, with a view of minimizing the possibility of future friction.

The Michigan Pacific Lumber Company has been formed in Grand Rapids, with a capital of \$1,500,000. Most of the stock is held by Michigan men. The company undertakes to log and market 2,557,000,000 feet of pine, spruce, cedar and north-western hemlock, covering 51 square miles, in the virgin forests of Vancouver. A logging road, tugs, docks, buildings and a complete lumbering equipment are being installed in the district, which lies 30 miles west of Vancouver.

During the last week or two a number of lumber buyers from the American side have been in Vancouver purchasing for the United States market the higher grade lumber and shingles, the prices being on the basis of the American list. All of the orders call for delivery as soon as the lumber can be manufactured. The demand for British Columbia shingles on the other side of the boundary line is good at present and recent sales of clears have been at the rate of \$1.85 to \$1.90 a thousand.

A timber deal involving nearly a million dollars has been completed by which a syndicate of United States capitalists has acquired the timber lands about Cowichan Lake, formerly held by the C.P.R. as a part of the E. & N. land grant. The sale of the timber, it is said, is conditional upon the early construction of the Cowichan Lake branch of the railway. The company have about completed the location of the line, which will reach the E. & N. main line a few miles out of the centre of Duncan. The timber will be brought over this line to salt water probably, where it will be manufactured into lumber for shipment.

An interesting case, Nichols v. Hunter, is being heard by Chief Justice Hunter in the B. C. courts. The plaintiff and defendant were the original stakers of the Big Central mine, near Central Lake on Vancouver Island. They had prospected together and discovered the mine. When it was bonded the proceeds were divided. While the plaintiff remained in Victoria to look after the bonding of the property under a power of attorney given him by the defendant, the latter staked timber near Bear River. The plaintiff claims a half interest in that also, and contends that the mine was bonded to get money to stake the timber. The defendant disputes the claim.

A deputation of prominent B. C. lumbermen interviewed the Provincial Government last month on the policy to be adopted in regard to the timber legislation. The principal request was that the 21-year licenses now granted be made perpetual, thus assuring certainty of tenure. The deputation was introduced by A. H. B. Macgowan, Vancouver, supported by Osborne Plunkett. The deputation consisted of R. F. Taylor, manager of the Merchants' Bank of Victoria; Mr. Beach, manager of the Royal Bank; N. S. Logan, J. M. McMillan, W. N. Garland and W. J. Paterson, Vancouver; R. H. Buckland, New Westminster; M. J. Scanlan and W. S. Dwinell, Minneapolis, who have large timber holdings in that province. The matter remains in abeyance.

Tenders for spruce lumber, required by the Edmonton, Alta., City Council during the year, were recently opened by the commissioners. The tenders were based on the amount of spruce used last year, which totalled 828,000 feet. For the different sizes the tenders were: Edmonton Lumber Company, \$20.40, \$21.25, \$20.40, \$21.25; D. R. Fraser & Company, \$20, \$21, \$20; John Walter, \$20.40, \$21.25, \$20.40, \$21.25; McInnes Lumber Company—on cars, \$18.50, \$19.50, \$18.50, \$18.50; delivered from yards, \$19.50, \$20.50, \$19.50, \$19.50; Cushing Bros., Company, \$19, \$20, \$21, \$21; W. H. Clarke & Company, \$20.40, \$21.25, \$20.40, \$21.25; Alberta Lumber Company, \$20, \$21 to \$23, \$22, \$21.50 to \$23. The commissioners recommend the acceptance of the Cushing Brothers Company, Limited, tender, the McInnes Company having made certain stipulations with which the board could not comply.

Forty-eight square miles of timber limits in the Harrison Lake district, estimated to contain eight hundred million feet of standing timber, have been acquired by purchase by C. S. Battle, a well known timber operator of Vancouver. The vendors were Davidson Bros., John A. Tees and John R. Brown, of Vancouver. Mr. Battle has disposed of a portion of his interest to A. F. Sutherland, also of Vancouver. Although both parties to the deal decline to give figures, rumor has it that the selling price was \$175,000. No plans have yet been made by the new owners. If they decide to operate the limits, a large sawmill may be erected on Harrison Lake, along the line of the Canadian Pacific Railway, or else a plant at Vancouver or New Westminster. If the latter alternative is adopted the logs will have to be floated down the Fraser River. The limits are located at the north end of Harrison Lake, Fire Creek, Fire Lake and the Lillooet River. Mr. Battle is credited with being one of the most extensive owners of timber limits in British Columbia. His holdings are said to considerably exceed one and a half billion feet.

At Victoria, B.C., last month the T. N. Hibben Company exhibited an extensive group of large pictures of the British Canadian Wood Pulp and Paper Company, showing the progress of their big plant now under course of erection, at Port Mellon, near Vancouver. Much interest was manifested in this plant owing to the fact that there are a large number of local stockholders and that this is the pioneer pulp and paper mill of British Columbia. The photographs gave a good interior view of the plant, showing the four-drier paper machine, cylinders, beating engines, etc., already installed. One of the views showed the huge digesters being swung into place by heavy cranes. These digesters are capable of treating five tons of wood per charge, and were manufactured by the Pusey-Jones Company, Wilmington, Del. The machinery is being rapidly installed and the big plant should be in operation in six weeks' time. The paper machine already installed is capable of turning out about 150,000 pounds of book, ledger and fibre paper per week. The erection of this plant marks an epoch in the development of the wood pulp and paper industry of British Columbia, and the opening of the plant is being looked forward to with great anticipation as it not only will employ a vast number of men, but will be the means of further developing the industry.

Highest Efficiency is what you look for in your plant and what you get when you install Western Electric Generators

HIGHEST Efficiency day-in and day-out—under heavy loads or light ones.

That's what the Western Electric Generators will give you.

Thirty years of constant working to improve is back of every machine.

\$230,000,000 worth of apparatus put into service in the past five years—that is the Western Electric Company's record—figures that must prove to you, better than anything else we could say, that Western Electric Generators give the highest satisfaction.

Those parts in which heat is developed are so generously and so well ventilated that the heating is kept at a minimum.

Perfect regulation is obtained by so proportioning the parts as to reduce to the lowest possible value the quantities which tend most strongly to prevent good regulation.

You who own a plant should know more about Western Electric Apparatus. Our Bulletin No. 510 shows you all the details and we will gladly send you a copy. Write for it to-day.

WE OFFER

6% Timber Bonds

First and Refunding Mortgage Gold Bonds

of

The Long Bell Lumber Company of Kansas City, Mo.

(Capital and Surplus, \$15,632,203)

Bonds dated 1st May, 1907. Due serially on 1st May and November from 1913 to 1922, inclusive. In denominations of \$1,000 each. Interest payable 1st May and November at the Central Trust Company of Illinois, Chicago, and the Canadian Bank of Commerce, Toronto. Bonds may be registered.

Trustee: GENERAL TRUST COMPANY OF ILLINIOS, CHICAGO

The Bonds are secured by about 375,000 acres of Long and Short Leaf Yellow Pine Timber Lands, OWNED IN FEE SIMPLE, located in Louisiana and Texas, containing over FOUR BILLION FIVE HUNDRED MILLION (4,500,000,000) feet, log scale, of merchantable pine timber and seven large lumber manufacturing plants (including at each plant, saw mill, planing mill, brick dry kilns, machine shop, water works and electric light plants, logging equipment, houses and other buildings necessary for a modern plant) with a daily capacity of one million (1,000,000) feet per day.

The net earnings (profits) of the Long Bell Lumber Company for the year ending January 1, 1907, (after crediting stumpage account and charging profit and loss account \$4.00 per thousand feet), were \$2,330,488.25, over two and one-half times the largest annual payment of principal and interest. The average net earnings (profits) of the Long Bell Lumber Company for the past three years were \$1,629,679.03, over three times the interest charge on this bond issue.

The total assets of the Long Bell Lumber Company, according to official statement, exceed \$25,000,000; it possesses the highest credit and has successfully conducted a large lumber business for over thirty years under the same management.

Timber located in the Southern States has never been destroyed by fire. This statement will be verified by lumbermen and other persons familiar with Southern Timber. Any serious damage by fire is practically impossible because of the absence of undergrowth and the height of the trees. This is one of the most important facts in connection with this security.

DeLoach "Prince" Hand Feed Shingle Mill

JOHN H. CRANE
Manufacturer of Lumber and Shingles

DELOACH MILL MFG. CO.,
BRIDGEPORT, ALA. MONTEREY, ALA., JULY 2, 1907.

GENTLEMEN,—I purchased from you in 1905 a "Prince" hand feed shingle machine. I have operated it and find it all you claim for it. We cut at the rate of 30,000 shingles in 10 hours and made first class shingles. I consider your machine a very light running machine. If I wanted another hand machine I would certainly buy a DeLoach Prince.

With best wishes for your success, I am

Yours very truly,
JOHN H. CRANE.

Georgian Bay Engineering Works

P. O. BOX 425

Midland - Ontario

A Guaranteed 1,200% Investment

There is no safer or more profitable place to invest your money than in your own business.

A forced draft system would increase the efficiency of your entire plant, without making it necessary to add another name to your pay roll.

In no other way could you add so much to your output, and, therefore, to your profits, with so little outlay.

The Gordon Hollow Blast Grate ("The grate with the reputation") increases the steaming capacity of a boiler 25 to 50.

It makes it easy to run the mill with nothing but sawdust, if desired.

It renders you independent of the weather.

It enables you to control your fires as perfectly as though you were burning gas.

It greatly lightens the labor of firing.

It is so extremely durable that in the end it is far cheaper than any draft grate.

Wouldn't you like to have all the steam you wanted all the time?

Wouldn't it be worth considerable to you to be able to burn any kind of mill refuse, in any condition?

Wouldn't it increase your profits if you could save your edgings and slabs and sell them?

Most mill owners answer these questions in the affirmative, and when they install the Gordon Hollow Blast Grate affirm that it pays for itself EVERY THIRTY DAYS, which of course, means A PROFIT OF 1200% A YEAR.

We don't ask you to take any risk, nor to accept our statements as conclusive.

We are perfectly willing to ship you an outfit and let you test it as severely as you please for thirty days, with the understanding that you are under no obligation to keep it unless it proves satisfactory, and that, if you see fit to return the outfit, we will pay the freight on it BOTH WAYS.

Gordon Hollow Blast Grate Company

Greenville - Michigan

"THE DUNBAR"

New and Improved

STEAM LOGGING ENGINES

Best on the Market

This is the machine for which we claim all the good Qualities possessed by any other and a great many valuable improvements besides.

This time we wish to call your attention to one of many important points which prove conclusively the superiority of the **Dunbar Logging Engines**: that of the Hydraulic Apparatus for raising and lowering the Boiler, an invention of our Mr. Dunbar, Sr. (for which patents are pending). By this device all danger from rush of water to either end of the Boiler, caused by irregularities of the road, is avoided. One of the most serious drawbacks in other Engines is the fact that the Boiler is stationary on the frame, consequently a source of great anxiety because of the danger to both the Crown Sheet and the Tubes. You can readily understand that in going up or down hill either the Crown Sheet or the Tubes are bared, causing them to become so heated that they will leak badly, and after repetition for a time the Boiler will be practically ruined.

This improvement, which supersedes our previous method for raising or lowering the boiler, has been added since cut herewith shown was made.

Should you contemplate putting in a Logging Engine we shall be glad to take the matter up with you and give you all particulars.

Quotations for Logging Sleds furnished.

There are more DISSTON BRAND Band and Circular Saws used than any other make, and by a large majority.

WHY?

Because millmen and sawyers recognize by the use of the DISSTON SAWS they obtain the greatest results for the least cost.

WE MAKE THIS STATEMENT WITHOUT FEAR OF SUCCESSFUL CONTRADICTION.

POINTS OF MERIT

MATERIAL

FINEST
CRUCIBLE STEEL

HARDENING

AND
TEMPERING

DISSTON
METHOD

GRINDING

DISSTON
METHOD

TENSIONING

DISSTON
METHOD

UNIFORMITY.
TOUGHNESS.
GREATEST TENSILE STRENGTH AND ELASTICITY.

Being Manufacturers of our own steel, and thoroughly familiar with its makeup, we are able to absolutely adjust the hardening and tempering processes to the degree giving that perfect combination of hardness and toughness that produces the "edge, tension-holding and standing up qualities" for which the DISSTON SAWS are renowned.

By the DISSTON METHOD all Band Saws are ground perfectly flat and uniform in thickness, thus making possible a very close adjustment of the guides without creating any friction or heat when in operation at the highest rate of feed; and all Circular Saws, whether tapered or of even thickness, are perfectly flat ground on the surface, thus insuring in all saws perfect clearance and true balance.

The uniformity of the material, temper and grinding is a large factor in the proper adjustment of tension; and this, together with the Disston process of tensioning, is the reason why the DISSTON SAWS will manufacture more lumber, under the same conditions, than any other brand of saw.

In the DISSTON BRAND of SAWS you have the advantages of the product of a progressive, up-to-date saw factory, the LARGEST IN THE WORLD, and where saws are made throughout, from the making of the steel itself—the superiority of which has been demonstrated for the past fifty-three years—to the finishing operation, and each process is performed by mechanics of long experience and highest order of skill.

We Make All Kinds of Machinery and Tools for the Care of Saws

"Hanchett" Circular Swage Shaper

A very useful machine in every filing room is the "Hanchett" Circular Swage Shaper. It combines all the necessary qualities for the giving of a perfect finish to the work of the saw swage. By its use every tooth is pressed into perfect shape, as in a mold, widest on face, widest at extreme points, tapering downward from the points and backward from the face. In this manner a perfect shape and a perfect clearance is obtained and the shape of all the teeth is absolutely uniform.

The "Hanchett" Circular Swage Shaper is adapted for side dressing log, shingle and small circular saws, and makes the successful cutting of good smooth lumber possible. The shaper is easily adjusted to the circular saw. When the saw swage has done its work, it is removed from the pin and the shaper is substituted. Simplicity and speed are distinctive qualities of the shaper. From 30 to 40 teeth per minute can be dressed with it.

"Hanchett" Adjustable Circular Saw Swage

That filers everywhere appreciate a good machine, has been demonstrated to us by the phenomenal success of our swages. The "Hanchett" Circular Saw Swage is easily the most desirable in the market. The special points of excellence that are combined in this machine are: Simplicity of Construction, Great Speed, Ease of Operation, Perfect Adjustment, Remarkable Durability.

LET US SEND YOU OUR NEW CATALOG NO. 6. LARGE, UP-TO-DATE, INTERESTING. TELLS ALL ABOUT MODERN FILING ROOM EQUIPMENT.

Because of the trouble arising through the manufacture of imperfect parts by outside parties, we have adopted as a trade-mark the name "Hanchett," so that our customers can prevent themselves from being imposed upon by being supplied with inferior parts, and hereafter all our dies, clamp screws and anvils will be stamped with this name "Hanchett," and if any of our customers receive these parts without our name stamped upon them, they may know at once that they are not genuine, and they should be returned and the proper parts secured from us.

We absolutely guarantee our swages and all swage parts, and any part furnished by us which fails to be perfect in every respect, both in workmanship and material, will be promptly replaced by us without charge.

This Saw Stands Without a Rival

AND IS THE

FASTEST CUTTING SAW IN THE WORLD!

Its Superiority consists in its Excellent Temper. It is made of "Razor Steel," which is the finest ever used in the manufacture of Saws. We have the sole control of this steel. It is tempered by our secret process, which process gives a keener cutting edge and a toughness to the steel which no other process can approach.

Maple Leaf Saw Set

MANUFACTURED BY

SHURLY & DIETRICH, Galt, Ont.

Directions.—Place the set on the point of tooth, as shown in the accompanying cut, and strike a very light blow with a tack hammer. If you require more set, file the tooth with more bevel.

If you follow directions you cannot make a mistake. Be sure and not strike too hard a blow, and it will set the hardest saw. On receipt of 40 cents we will send one by mail.

We are the only manufacturers in the world who export Saws in large quantities to the United States.

We Manufacture

HIGH GRADE BAND SAWS

Of All Widths and Lengths.

These Saws are made of Refined Razor Steel, and tempered by our Secret Process; for Fine Finish and Temper are not excelled.

Price of 3—0 x 7—0	\$6.25	\$6.75

These Doors are stocked in the above sizes only and are 1 1/4" thick. These prices are f.o.b., West Toronto. If required to be crated add 15 cents per door.

Are You Getting the Door Trade?

Retail lumber dealers should be getting a share of the Door trade in their communities. If you stock or handle **Batts' Doors** you can do a nice door business at a good profit. We manufacture veneered doors in all the cabinet woods. They are well made and sell easily.

Staved Columns

Have you given us a trial order on **Staved Columns**. This is a line you should be pushing. Our **Columns** are giving satisfaction everywhere. Write for prices.

WILLIAM HAMILTON CO. LIMITED

PETERBORO ONTARIO.

The

“Grand Triumph” Shingle Machine

has a minimum capacity of 30,000 shingles per day, and many operators have cut over 60,000 shingles in ten hours using this machine.

The frame is all of heavy cast iron, and all parts are securely bolted together.

It does not require much power to drive it, and it is an economical machine to operate.

Let us send you the name of some one near you using this machine ; so you can easily see it operating.

We Build Everything that Manufactures Lumber Economically

Our

Combined Lath Mill and Bolter

has a capacity up to 60,000 lath in ten hours.

It can be adapted for cutting pickets.

All the feed rolls are driven from a countershaft, which is incorporated in the machine.

Its frame is all iron, and it will stand up to the hardest kind of service.

Our catalogues are all interesting—send for them

A Suggestion — To the Trade!

We believe that the Lumber Trade in the Prairie Provinces and Ontario will make a mistake by not stocking up as heavily as possible with British Columbia Lumber and Shingles at present prices—which are **very low**: in fact lower prices with \$9.00 to \$10.00 logs, and \$5.00 shingle bolts, are an impossibility.

A **word** to the **wise** should be sufficient. Send us your order.

SIMONDS

Crescent-Ground Cross-Cut Saws

This is the identical Crescent-Ground Cross-Cut Saw which has for years been recognized as the best made or used in the United States. Since beginning the manufacture of these saws at our Canadian factories, we have found and are supplying a greatly increased demand throughout the Dominion. The Saws are made of Simonds Steel, and Simonds Steel is the best saw steel made. They run easy, cut fast and give good results. Sold by the hardware trade or direct from our offices.

Every Saw Covered by an Absolute Guarantee

We are Specialists on Lumber and Saw Mill INSURANCE

FOR OVER THIRTY YEARS we have made a close and constant study of this specialty, embracing not only "The Best Protection at the Minimum Cost" in the sense of Policies in the Strongest Companies at the lowest possible rates, but the enhanced Protection of such Policies so worded as to Insure you under whatever form of sale or undertaking you may make with your customers, unaware as you may be of the application of the Canadian Insurance Law in such instances.

We invite inquiry as to the above and our "ADVICE SHEET" system which we originated several years ago for the special convenience of our Lumber Customers.

We personally inspect each of the plants we insure at least twice a year.

Canada, United States and Great Britain, \$2.00 per Year, in advance; other foreign countries embraced in the General Postal Union, \$3.00.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Special care is taken to secure for publication the latest and most trustworthy market quotations throughout the world, so as to afford to the trade at home and abroad information on which it can rely in its operations.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

No. 6

The Scalpers a Serious Menace

The present dulness in the lumber business throughout Canada is accompanied by many difficulties which render the lot of the lumber dealer unpleasant. Low prices and small demand are bad enough in their way, but when they are accompanied by unbusinesslike and unfair methods of obtaining trade, they result in evils which have no compensating benefit for anyone concerned. This is the state of affairs at present, and one of its most pernicious manifestations is the appearance in the retail field of a number of so-called lumber merchants who have neither the experience nor the capital to carry them through. When times are good, such men might hope to be able to do a profitable business if they would content themselves with reputable methods, but their whole stock in trade is a readiness to cut into the business of others in the hope that after establishing themselves temporarily by means of a few sales, they may be able to make a big haul in an underhand manner and, if necessary, clear out. If not obliged to clear out they are so much the better off and continue their operations.

The method by which these "scalpers" proceed is a simple one, but it has been worked so often that the trade should be warned that at this particular time there are more of them operating than usual. By watching the market closely for a time they obtain information as to the requirements of a few consumers of lumber and approach them with offers of lumber at prices which cannot be duplicated by anyone who is carrying on a legitimate business. Then they look about for the stock to supply these orders and probably meet with no success. If they have contracted to supply the lumber at some future date they are able in the meanwhile to make a great deal of trouble for the trade. Firms which are doing business on businesslike methods will probably seek to obtain orders from the same parties as the "scalpers" have approached,

and will be told that they can obtain the lumber at a cheaper price. The "scalpers" may be able to avoid the necessity for making immediate delivery and to keep their would-be customers in suspense. Until the customer finally realizes that he will not obtain the lumber, the business in general suffers on account of the reports which gain extensive currency that prices have been reduced. Possibly the "scalper" in one or two instances will obtain the necessary stock by some peculiar proceedings and be able to make delivery. His ability to injure the trade is thereby greatly increased and unless his operations are quickly stopped the result is very serious. If they succeed once or twice the chances are that they will impose upon the trade and obtain lumber stocks for which they will only pay when closely pressed, and possibly never at all.

If these "scalpers" were simply endeavoring to sell their own stocks in the face of the general competition of the trade, there would be little which are doing business on businesslike methods will probably seek to depress prices by spreading reports of fictitious orders, which does the damage. They strive to obtain stock at less than manufacturing prices and to sell them at anything they can obtain which will afford a profit, however small. In some cases the more unscrupulous of their tribe are content to take orders and postpone delivery and, if possible, obtain a deposit upon the promise of delivery, and then, retaining the money, never supply the lumber. They can operate with a great deal of impunity because they have no capital to risk and no stock whatever in the trade. Being wholly irresponsible in a monetary sense, they are not amenable to court proceedings and can do very much as they please so long as they do not over-step the boundary of criminal law. Several of this class of operators have recently been working throughout Ontario. Some of them have been turned down by the trade, but they have succeeded in causing a great deal of trouble before being forced out. It would be a boon to the lumber industry at large if some concerted measure could be taken to eliminate them and to prevent them from preying upon the public in future.

Tariff Campaign Growing Hotter

The reports which have recently come from Washington in regard to the matter of the tariff on lumber have been of great interest to Canadians. The campaign in favor of the reduction of the duty on lumber has been going on for many months, and has developed rather into a campaign against the proposed reduction. Every interest which could possibly be affected by a change has been heard from, and those who have made the most stir in the public press are the opponents of the reduction. They feared that a complete removal of the duty, which had first been suggested, would ruin their business, as it would open the markets of the United States to Canadian lumber, and the lower grades of Canadian lumber, which cannot now compete in those markets, would be able to find a good sale across the border. This objection has apparently had a strong influence upon the members of the Ways and Means Committee of the House of Representatives, as it is reported now that they have reached an agreement and decided in favor of reducing the duty from \$2 per thousand feet on rough lumber to \$1.50 per thousand feet. This would be a certain amount of solace to those who desire cheaper lumber—those for whom lumber is a raw material of manufacture—and if the lower grades of lumber which are mostly feared by American lumber producers, there will be little to cause them anxiety, if the duty is left as high as 1.50 per thousand feet. The generally expressed opinion is that \$1.50 per thousand feet will suffice to keep out the low grades.

To American manufacturers of lumber a reduction to \$1.50 per thousand feet will in a measure be a satisfactory solution of the situation, as it will relieve them, possibly for a long time, of any further anxiety in regard to the permanence of their markets. It is reported that the change as proposed will receive the support of the Republicans and of a large number of the Democrats. If this report is correct the reduction will probably be brought about. There is, however, an element of doubt about the whole affair, inasmuch as reports have also come from Washington quite recently to the effect that the reduction will amount to one-half of the duty, which would mean a duty of \$1 per thousand feet on rough lumber instead of \$2. A duty of \$1 would probably open the markets of the United States to a large class of Canadian lumber and, so far as the Canadian producer is concerned, this would be to some extent

a temporary benefit, although it is to be feared that any material reduction in the duty would have the effect of encouraging too rapid a destruction of Canadian timber resources.

This whole question of the protection of the timber resources of Canada and the United States has come so prominently before the public of late that it cannot be overlooked. Canadians have a forcible lesson before them in the history of the United States lumber industry. Many forest reserves in the States have been completely destroyed and serious injury caused to a large section of the country by the disappearance of the forests, which act as a restraining force in preserving the regular flow of water in the large rivers and streams. The question of conservation has occupied an important position in the tariff campaign of the United States, though it is to be suspected that those who were most

active had less thought of forest preservation than of profit preservation, and desired more particularly to retain control of their markets. This is borne out by the fact that those Americans who are interested in Canadian timber resources have not scrupled to call loudly for a reduction of the tariff.

Up to the present the campaign has been waged wholly in the open, i.e., in the press and at public meetings. From now on it will centre at Washington and will be all the more intense. If the report, however, is correct that the Ways and Means Committee have come to a definite conclusion of the question, the speeches and other measures taken from now on will be largely for the purpose of placing those concerned on record, as the will of the Ways and Means Committee will probably be made law in the end.

Licenses Should Be Renewable in British Columbia

There is little reason to doubt that it would be more advantageous to the Province of British Columbia if, after the expiration of twenty-one years the timber licenses were renewable from year to year. Timber owners with one accord are in favor of it, and the mill men also desire it. The mill men, however, pay the royalties, and would oppose any arrangement with the Government for increasing the royalties in consideration of the renewal of the concession. The matter should be settled on a purely business basis. At present a licensee pays \$140 for a license west of the Rockies, which entitles him to one square mile of the timber which he has located. The rental and royalty, or both, are subject to increase. At the end of twenty-one years, when the license is nearly run out, the ground will probably have changed hands several times, and the owner may have paid a large sum for the holding. If the original licensee is the holder of the ground he will have paid \$2,940.

The greater part of the areas now under license cannot possibly be logged off in their twenty-one years. Moreover, in the public interest it is desirable they should not be logged off. The most important consideration, however, is the value of the timber land which has not been touched during the twenty-one years, for a licensee would not wish to renew his license on land which has not been logged off. An exchange deals with the question in this way: "The first consideration that will occur to most people is that such land would revert to the Crown to be again disposed of, and at first sight this seems a reasonable proposition. Nevertheless certain objections to it suggest themselves. First, what advantage would it be to the people to have the lands revert to the

Crown? The natural answer to this is that lands will be worth more when the license terms elapse than they are now, a proposition that cannot be disputed. But under the law the Government can require the holder of the license to pay the increased value either by increasing the rental, or royalty, or both. Therefore, so far as the revenue derived from the land is concerned, the Government would have just as much power to increase it, if the licenses were made indefinitely renewable from year to year, as it would have if they must lapse at the end of twenty-one years.

"But it will be said if the timber lands are put up for competition at a date from fifteen to twenty years from the present, there will be keen competition for them and the Government will get in very many cases substantial bonuses in addition to the rental. This would, no doubt be the case. But the Government should conserve the forest wealth, and act in the best interests of the province at large. If the licensee knows that his tenure is permanent as long as he chooses to pay what rent the Government may demand, his policy will be to conserve his timber so as to increase the value of his holdings. This would be of distinct value to the province. It would insure that in logging off his sections a logger would proceed systematically, so as to save as much of the timber as possible for the years to come. It would also mean that the holder of every license would have a direct personal interest in the prevention of forest fires. It would also make possible the introduction of an intelligent system of reforestation, or at least the adoption of regulations whereby the smaller timber could be preserved."

United States Takes Curious Stand on Pulp Question

Apropos of the campaign for the reduction of the duty upon lumber and other wood products entering into the United States, it is interesting to note what has occurred in regard to the proposal for a reduction of the duty on pulp and paper. A select committee of the House of Representatives took up this question and travelled through every section of the United States and Canada where pulp and paper are produced. They have reported to the House of Representatives in favor of certain reductions and have accompanied the report with a number of provisos which are of much interest to Canadians. The report states that about 5,280,000 cords of spruce were consumed in the United States east of the Rocky Mountains in 1907, and that 924,491 cords were imported from Canada in the fiscal year ending June 30, 1908. The amount of standing spruce in the United States east of the Rocky Mountains is estimated roughly at an amount equal to seventy million cords, and the annual production at 1,540,000 cords. "It is quite evident," says the report, "that there is not to-day enough spruce forest standing in the United States to furnish a future constant supply based upon the present methods of manufacture.

The recommendations which this special committee have made are based upon a policy of encouraging the importation from Canada, of ground wood pulp and spruce wood. It is proposed to admit mechanically ground wood pulp free, from any country or Province which does not impose an export duty, or any duty or fee levied with the same object, upon pulpwood. If such a duty be imposed the tax will be one-twelfth

of one per cent. per pound, dry weight. The duty on chemical wood pulp unbleached is to be one-sixth of one per cent. per pound dry weight, and on bleached one-fourth of one per cent. per pound dry weight, provided no export duty or similar charge is imposed. If it be imposed the amount is to be added to the duty on the chemical pulp. The duty on newsprint paper is to be reduced to about \$2 per ton, equivalent to five per cent. ad valorem, unless the paper comes from a country which imposes an export duty. In the latter case the amount of the export duty and an additional duty of two-tenths of one cent per pound are to be added.

The provision relating to export duties is one which will not meet with much approval in Canada. It might, without injuring the proposed arrangements have been left out entirely. Canadians wish to export the products of their spruce forests in the form of paper instead of in the form of wood. American manufacturers of paper are entirely welcome to Canadian spruce if they will come into Canada and establish mills for the manufacture of paper, instead of shipping raw material to the United States to be turned into paper there. Any export duty which may be imposed by Canada will be for the sole object of encouraging the manufacture of paper in Canada and discouraging the export of raw material. The position taken by the special committee is one which should not recommend itself to the House of Representatives. It is based upon a wrong assumption as to the situation so far as it has an international bearing. It is based upon the assumption that Canadian paper and pulp are seeking to displace the American articles, whereas the real situation

is that there is an imperative demand in the United States for more paper than can be produced in the country itself. Under such circumstances the United States are not the parties to dictate terms. Canada has the natural resources which are needed for producing paper to supply the American demand, and it is for Canada to say under what conditions

these resources shall be allowed to cross the border. Any amount of legislative enactment on the part of the United States cannot alter the situation, and no considerations should be allowed to persuade Canada to permit of raw material, such as spruce, leaving Canada without being worked up into a manufactured article.

A Proposed New Car-Stake Order

The Dominion Board of Railway Commissioners have published the following draft of an order which they propose to issue in connection with the proper safeguards for the handling of lumber shipments:

"That every railway company subject to the legislative authority of the Parliament of Canada operating a railway by steam power, adopt the following rules and regulations to govern the loading of lumber and logs:—

"That cars be so loaded that one hand brake shall be accessible and operative; and that there be at least six (6) inches between the brake wheel and the lading.

"That all stakes, clamping pieces, bearing pieces, and braces be sound, straight-grained lumber (hardwood preferred), and free from knots that would materially impair their strength. (Hemlock must never be used.) Care must be taken to keep the stakes from spreading at the top while cars are being loaded, and in no case must the load exceed the width of the car. Unless otherwise specified, stakes must not be less than four inches wide by five inches deep, or saplings five inches in diameter at the centre, tapered at the ends to fit accurately, extend through and completely fill the stake pockets, which should not be less than three and one-half inches wide by five inches deep.

"That opposite stakes be always fastened together. When the specified fastening is by means of boards, there must be two boards not

less than one by six inches in dimension, unless otherwise specified, and fastened at each end by not less than three ten-penny wire nails. (Hemlock must never be used.) When the specified fastening is by means of wire, the wire used, unless otherwise specified, must be equal to six strands or three wrappings of No. 8 telegraph wire (or wire of equal strength), and the wire must be secured, to prevent it from slipping.

"That shippers and the railway companies and their operators and employees shall see that all open and flat cars are loaded, and the loads protected in accordance with the terms of this order.

"That every such railway company shall be liable to a penalty not exceeding fifty dollars for every failure to comply with the foregoing regulations.

"That every employee of such railway company, and every shipper, shall be liable to a penalty of a sum not exceeding twenty-five dollars for every failure to comply with the foregoing regulations."

The matter will be taken up and gone into at the sittings of the Board to be held at Ottawa on the first Tuesday in April, 1909.

If these regulations should be put in force an additional expense would be incurred, which, although not specifically placed upon the shipper, is made binding upon all. Shippers should be safeguarded in this matter, so that any additional expense will not fall upon them and thereby upon the public.

New Lumber Organization in British Columbia

A new organization, known as the British Columbia Lumber, Logging and Forestry Association, with which is amalgamated the British Columbia Chamber of Commerce and the Forestry Association, has been formed in Victoria by prominent lumbermen, representative of the different provincial sections. Several meetings have been held, and all were largely attended. The objects of the body, according to the announcements made, are varied, but the principal ones are to secure stable titles to timber lands, to support legislation for the protection and in the interests, generally, of the industry, and to endorse and assist in carrying to fruition, plans for the conservation of British Columbia's forest wealth.

Following are the officers of the association: President, A. D. McRae, president and manager of the Fraser River Saw Mills, Limited, New Westminster; 1st Vice-President, Otto Lachmund, president of the Mountain Mills Association; 2nd Vice-President, M. S. Logan, of Logan & Stinson, Vancouver; 3rd Vice-President, Peter Lund, general manager of the Paterson Lumber Company, of Wardner, B.C.

Executive and advisory committees also have been appointed. The former consists of seven and the latter of forty-two members. On the executive are two Victorians, namely, A. C. Flumerfelt and Michael Carlin. The other five represent the coast and mountain districts as follows: Capt. M. N. Garland, president and general manager of the Nimkish Lake Logging Company; J. McRae, managing director of the

Rat Portage Lumber Company, of Vancouver; George Small, president and general manager of the Small & Bucklin Lumber Company, New Westminster; Ottis Staples and T. Kilpatrick, of the Kootenays. The association has two secretaries, Dr. Judson Clark, secretary-treasurer of the B. C. Chamber of Commerce and Forestry, which amalgamates with the new organization, and Mr. W. A. Anstie, secretary of the Mountain Mills Association.

Mr. W. A. Anstie is one of the most capable men in lumber circles in the province. He will retain his former connection with the Mountain Association.

Mr. Judson F. Clark, B.S.A., Ph.D., is one of the most widely known foresters on the continent, having been associated with Mr. Pinchot, of the United States Department of Agriculture, at one time professor of forestry in Cornell University and late forester of the Ontario Government, who has been secretary of the British Columbia Chamber of Commerce and Forestry. Dr. Clark's duties in connection with the eastern people he represents in this province would not permit of him giving his full time to the work of the new association, but the executive have been fortunate in securing his services in the capacity of advising forester. Dr. Clark has, since going to the coast, delivered some of the ablest addresses on the subject of forestry that have been heard, and his services will be invaluable to the Government, as well as to the lumbermen of the province.

Lumbermen in Spokane and throughout the United States inland empire believe that business will be better this spring and summer than at any time in the history of the western country, for the reason that there is every indication of great activity in building, not only in the cities and towns, but also in the country and more especially in the new towns recently opened along the line of the Chicago, Milwaukee & Puget Sound Railway Company in Washington, Idaho and Montana. Work on the North Coast Railroad, between Spokane and the coast, of which Robert E. Strahorn, of Spokane, is president, and the building of the Big Bend Transit Company's line from Spokane into the Big Bend

wheat belt, by Frederick E. Goodall, president of the Spokane Chamber of Commerce, and his associates, and the line in the Okanagan country, projected by Colonel Albert M. Dewey, of Spokane, will mean much for this part of the Northwest. The farmers and orchardists have had a good season and many of them will make improvements in the way of residences and barns and storehouses, and there is a more than usual influx of settlers into the newly opened irrigation districts.

A newly imported wood, used for high-class cabinet and piano work, is the Tasmanian myrtle. It is of a rich pink color, hard and very close-grained.

Use of Norway Pine for Door Making

Interesting Opinions Pro and Con by Manufacturers — Methods of Working Followed

A question which has frequently been asked of the "Canada Lumberman" is whether good doors can be made of Norway pine. Correspondents often state that they have trouble with it on account of its tendency to warp. They therefore use other woods such as white pine, southern pine or cypress. With a view to obtaining the ideas of those who have had experience upon the question, enquiries were made of a number of door manufacturing companies, and some useful information was received in the replies. It appears from these that there is a strong objection to the use of Norway pine for the reasons stated, in some quarters, but that others who have studied the matter closely have come to the conclusion that a good door can be made from this wood if it is properly handled. Stress is laid more often than anything else upon the importance of having the wood thoroughly kiln dried. Several manufacturers in the Southern States are loud in their praise of red cypress for doors and believe that it gives more satisfactory results than any other. A number of the replies received in connection with this subject are published herewith and will make interesting reading.

In Favor of Using Norway Pine for Doors.

Those who believe Norway pine can be used successfully for doors write as follows:

The Bryan Manufacturing Company, dealers in lumber, lath, shingles, doors, etc., Collingwood, Ont., say:

"We have made large quantities of doors of Norway pine and have had no complaints of same warping and do not think they are nearly as liable to warp as doors made from Southern or Georgia pine, and if they are properly manufactured we think there will be little trouble from this cause.

"Our process of manufacture is to thoroughly dry-kiln material in the rough, then to rip it up and cut it to sizes and plane it out of wind on the buzz planer or jointer. This insures the door being straight and out of wind when leaving the factory, and, after that, if it is given the ordinary care that any panel door should have and not put into a damp building, we do not think it is any more liable to warp than a door made from white pine. We think you will find in a good many cases where people have had trouble with warping, that the doors have either been made from stock not thoroughly kiln dried or else it is not dressed out of wind in manufacture, in which case the door would be warped before leaving the factory. In our case we do not mortise and tenon our doors but put them together with hardwood dowels, which, we claim, makes a superior job and does not weaken the stile of the door nearly as much, and therefore it is not nearly so liable to warp, as if it was mortised and tenoned."

The G. W. Murray Company, Limited, Winnipeg, say:

"We have never attempted to manufacture doors out of Norway pine. At the same time, we think that the material can be made to answer the purpose if properly treated in the kiln-drying. British Columbia fir at present takes the place of most of the materials which would be used for natural finish, the Norway fir is consequently not a factor in the door business in this western country."

John Piggott & Sons, Windsor, Ont., say:

"We have made quite a lot of doors out of Norway pine and have always been very particular about selecting the stuff. When we get good material and dry, we do not find that it warps much more than any other wood, and if it comes out of good large logs we think that it will stand as well, if not better than, Southern pine."

Siemon Brothers, Limited, Warton, say:

"Our experience in this has been limited, but a firm which the writer worked for, made the doors out of cheap material glued up, and veneered them with Norway or Georgia pine, in fact anything, and that way makes the best door."

John Harrison & Sons' Company, Limited, lumber lath and shingle dealers, Owen Sound, Ont., say:

"We get some very nice Norway or red pine here, which we find very suitable for inside doors. It is not nearly so hard or liable to warp as Southern pine."

Some Reasons Against Norway Pine Doors.

Those who do not favor the use of Norway pine for doors write as follows:

Ed. C. Nicholson & Son., contractors and builders, St. Catharines, Ont., say:

"We have never made or used a door made of Norway pine material, as it is not satisfactory to work. It is too heavy. The fibre is too dense. It is too easily splintered and warps and twists. It will not stay straight after sawing. For instance: take a 2-inch plank 8 x 10 inches wide. Saw through the centre. It will either go convex or concave. It is given to checking and has too much sap, which discolors and turns green. We have made some sash with Norway, but they were not satisfactory. Norway is all right for framing in buildings, where it is covered up, such as timber jointing, sheeting, etc., but not for finishing. It does not take the paint very well. The paint is apt to peel off. We have used it for flooring, but if left bare and washed frequently it soon gets very dirty and begins to peel."

The Gilmour Door Company, Limited, Trenton, Ont., say:

"Neither Norway nor yellow pine makes a satisfactory solid door, because both of these materials warp badly. White pine holds its shape better. We never make any solid Norway doors, but sometimes use Norway panels and yellow pine panels in white pine framing. These panels are held straight in the grooves of the framing. We make a great many solid yellow pine doors, but in most cases persuade our customers to permit us to build the framing up in three parts, which construction gives it a less tendency to change its shape. The only way to overcome the twisting or warping of lumber is to make it up with glue in two or more parts, i.e., the principle of the veneered door, and even then they will sometimes change their shape under very trying conditions."

The M. Brennen & Sons Manufacturing Company, Limited, wholesale dealers in lumber, lath and shingles, Hamilton, Ont., say:

"In our opinion neither Southern pine nor Norway pine is suitable for making doors, excepting for the panels. We use both the Southern and Norway pine for the panels, some people prefer the Southern pine to the Norway pine for panels. We find that the Southern pine for panels is more liable to twist and split than Norway."

"We do not think either Norway or Southern pine would be suitable for stiles or rails of doors, and we have not attempted to use either of these except on one or two occasions some time ago, when they gave very poor satisfaction."

The Schultz Brothers Company, Limited, contractors and builders, Brantford, Ont., say:

"We make nothing but a No. 1 door, and in our experience soft white pine is about the only thing that can be relied upon for rails and stiles, not to spring or warp, except cypress or cedar, which is sometimes used with very good results."

"Norway would make a very poor material for doors on account of it being so hard in nature, and the same might be said of Georgia or Southern pine. Where Georgia pine or any other particular finish is wanted, it is customary for us to veneer on a white pine core."

The S. Hadley Lumber Company, Limited, Chatham, Ont., say:

"We are unable to give you any information from personal experience, as we have never made any doors from Norway pine, believing that it would not be satisfactory, and consequently we have never experimented with it."

W. C. Edwards & Company, Limited, Rockland, Ont., say:

"We never before heard of manufacturing doors from red pine. We use white pine altogether for doors, excepting where we use oak or some of the hardwoods."

Red Cypress Favored in the Southern States.

Among those who advocate red cypress for doors are the following:

The Standard Millwork Company, Norwood, Ohio, say:

"We cut up a considerable quantity of Louisiana red cypress every year in the manufacture of doors, sash and blinds. We make various other items in the millwork line of cypress. We regard cypress as the nearest wood in all respects to the old Michigan and Wisconsin white pine, of any wood now in general use. It will hold its place and remains straight in doors. It will take a natural finish easily, and makes a fine finish. It will paint equally as well as any wood, and there is no doubt that it is more durable than any wood in use. Regarding the Southern yellow pine for millwork, we manufacture a great many doors from the short-leaf yellow pine. It makes an elegant door finish in the natural, is beautiful, has a fine grain, stands well, and is but a little heavier than cypress or white pine. Consumers who have used these yellow pine doors and are able to secure well manufactured doors, continue to use them."

The Louisiana Red Cypress Company, of New Orleans, La., say:

"We do not manufacture anything but Louisiana red cypress lumber, which is exceptionally well adapted to the manufacture of sash, doors and blinds. It is being used to-day where white pine was used in the past, and will make the very best doors on the market, not only on account of their durability, but because of the beautiful grain of the wood, and also on account of its character, as it does not warp."

The Huttig Sash & Door Company, St. Louis, Mo., say:

"We have been using cypress lumber largely for the past fifteen years and are using same more and more each year, which takes the place of the old Wisconsin white pine. The fact is, that during the last five years we have been using from four to six million feet of cypress lumber each year and believe that it is coming more and more into the general use."

The Baltimore Sash & Door Company, Baltimore, Md., say:

"We consider cypress one of the best substitutes there is for Northern pine. As to our method of treating the lumber, would say it may be treated no different from white pine, the main object is to have the lumber dry and when it is properly dried it makes excellent material."

As a result of the Alberta elections being called for March 22nd, the convention of lumber manufacturers and retailers between the great lakes and the Pacific coast, which was to have been held at Calgary on March 23rd, has been postponed until April 13th.

The British Columbia Trade

Some Reforms which are Much Needed.

There is a considerable difference of opinion as to the outcome of the requests which have been made by numerous delegations on behalf of the lumber and timber industries to the Provincial Government. A prominent dealer in discussing the subject recently said that he did not think the delegations would have much effect. The Government had a settled policy upon the question, which he believed was sound, and which they would not change upon the request of any delegations. Continuing, he said: "I believe more effective work could be done with the Government, by employers of labor asking for redress under the Employer's Compensation Act and the Boiler Inspection Act, respectively. I do not see why the unfortunate employer should imperil his position commercially by being mulcted in heavy damages for unavoidable accident occurring to the workman, when the whole province shares in the benefit accruing from the manufacture. In regard to the boiler inspection, British Columbia is the only province in which manufacturers have to pay for Government boiler inspection and the insurance of the boiler as well. By paying for Government boiler inspection the manufacturer gets nothing out of it. If the boiler exploded next day, the manufacturer would have to settle for the damages. I think that the inspection of the insurance company should be sufficient. In the latter case, when boilers explode, the insurance company must pay the damage. It seems then, very unjust that double it should be paid by the British Columbia manufacturer.

An official who is closely in touch with the Government gives it as his opinion that the Government would have much difficulty in changing the tenure of annual licenses and at the same time establishing an equitable rental. If an equitable rental were established, an increased tenure would not improve conditions materially as conditions were bound to change in the near future and licenses would become more valuable than leases. When the term of a lease was about to expire the Government would probably increase the rental of the lease, but the license rental, if some of the timber men had their own way, would continue the same from 21 to 42 years. The Government would find it difficult to legislate in such a way as to decrease the value of leases and increase the value of licenses.

Washington and Minnesota Dealers Purchase Vancouver Limits.

Some 32,000 acres of timber land on the Jordan River, Vancouver Island, have been purchased from J. A. Sayward, of Victoria, by the Michigan-Pacific Lumber Company. Seattle lumber dealers who are operating in British Columbia are heavily interested in the newly formed company, which was organized at Grand Rapids, Mich., with a capital stock of \$1,500,000. Another big timber deal has also been recorded, 30,000 acres of timber lands having been purchased from a Vancouver syndicate of capitalists by J. M. Tuller, manager in British Columbia for F. R. Pendleton, H. S. Gilkie & Company, a United States syndicate, the members of which reside in Minnesota and Wisconsin. The lands are situated 200 miles north of Vancouver and include a valuable tract of cedar. It is the intention of the owners to erect lumber and shingle mills on the property. They will also construct several miles of railway this summer. This is the second large tract of land in British Columbia, which has passed into the possession of Messrs. Pendleton & Gilkie, a purchase of a considerable acreage of fir timber having been made by them some months ago. The property, which was taken over last year, and which lies about 70 miles to the north of Vancouver, will also be developed this summer.

It is estimated that there are about 350,000,000 feet of timber on both the tracts just purchased and on the property which the company took over last summer.

It is stated that the company have also under consideration the purchase of several other timber tracts in different parts of British Columbia.

B. C. Lumber Invading California Market.

Much speculation has been caused by the recent loading of a vessel at the Fraser River mills, near New Westminster, B.C., with a cargo of fir lumber for California. Owing to the duty of \$2 a thousand feet on lumber, it is thought hardly possible to make a profit on this shipment. It is understood that the vessel will take a cargo of clears, and while this grade of lumber is known to be somewhat scarce at the mills on Puget Sound, the only solution millmen can offer for this shipment being made from British Columbia is that it is sold very cheaply. This quality of lumber is quoted by Puget Sound mills at about \$23, and if the sale of this cargo is based on that figure, it might prove an expensive shipment when the duty is added. The cargo consists of about 1,500,000

feet. The trade with California in this class of lumber has for years been held by Puget Sound, Gray's Harbor and Oregon ports. According to shipping authorities this cargo will create a precedent. Much interest will be taken in the outcome of the transaction, as it will cast an interesting sidelight upon the tariff issue, which occupies so prominent a position in lumber circles at present.

Interesting B. C. Short Lengths.

The Elk Lumber Company, of Fernie, B.C., have purchased a Stetson-Ross Ready-Sizer, size 10 x 30, with shiplap attachment.

J. D. McArthur, of Winnipeg, says that he regards British Columbia timber as one of the safest possible investments. He has purchased 60 square miles of timber limits in the Kitimaat Valley, B.C., which he acquired simply as an investment.

The mill of the Fairview Cedar Lumber Company, owned by John Hanbury, of Brandon, on the south shore of False Creek near Granville street bridge, Vancouver, has been destroyed by fire. It has been partly dismantled in preparation for removal to another site, and there was not much machinery inside. The damage was about \$5,000.

A number of Victoria and New York capitalists have purchased from the Prince Rupert Tie & Timber Company 50 square miles of timber lands, situated on Vancouver Island, for \$275,000. The Prince Rupert Tie & Timber Company is composed of Vancouver and Ottawa men, and has its headquarters in Vancouver.

An amendment to the Bush Fire Act, introduced by the Chief Commissioner of Lands and Works, has been passed. It sets forth that no person shall light fires in any fire district for the purpose of clearing land or for other purposes, between May and October, without a written permit from the Fire Warden, Assistant Fire Warden; Timber Inspector; Government Agent; Gold Commissioner; Forest Ranger; Mining Recorder; Provincial Police Officer, or Constable.

By an Act of the Legislature at Victoria, the law against exporting logs to the United States from British Columbia has been extended to take in the whole province. When the law was originally passed it only applied to the coast, the Legislature deeming that it would be impossible for logs to be exported east of the Cascades. Of late, however, a great deal of timber had been taken out from the Kootenays and manufactured in Idaho. The new law will not go into force until July.

Mr. Alan M. Stewart, secretary-treasurer of the Western Retail Lumbermen's Association, in a letter to the "Canada Lumberman" says: "We have just passed through one of the worst years in the history of the lumber business and I am glad to see that all prospects are looking like better times. I think that by the end of this year the lumber business will get on to a living basis, which it certainly has not been for the last two years."

Walter Thomas, of Vancouver, formerly manager of the Vancouver Gas Company, claims to have solved the secret of manufacturing gas out of mill refuse. He is demonstrating his system daily by a 40 horsepower engine, and says he can sell illuminating gas at 50 cents a thousand and make a large profit, besides utilizing valuable sub-refuse. The hundreds who have seen the engine operating say that Thomas has either nothing or something very big in possibilities. The small engine turns out very fine illuminating gas, and several by-products.

In the case of the purchase of the Harrison River Mills Timber & Trading Company, by Douglas Cameron, of Winnipeg, there appear to have been certain deficiencies in the estimates of the assets as submitted, and as the agreement of sale called for arbitration proceedings, the question was submitted to F. C. Wade, J. H. Senkler and H. O. Alexander for arbitration. Messrs. Senkler and Alexander found the value of the deficiency to be \$9,842, but Mr. Wade disagreed, and as all three did not find alike the judge has set aside the award of Messrs. Senkler and Alexander.

Under the supervision of Cecil M. Bryant, A.R.S.M., A.I.M.M., an experimental plant has been operating at Vancouver for making turpentine from pitch wood, the patent being issued to F. T. Snyder. It is now claimed that the result of these experiments is that a method has been discovered for extracting, with little expense, chemically pure turpentine, tar oil, resin, charcoal and pitch, from a cord of pitchy wood purchased at \$5, the entire value of the products being \$24.70. The total expense is \$12.50, and it is claimed that a thousand cords of wood can be treated daily by a comparatively inexpensive plant.

An idea of the slaughter of timber annually in the Canadian woods may be gleaned from the fact that 12,000,000 acres of timber lands is required to furnish Canada's annual export of pulpwood, and something like 8,000,000 acres to supply Canada's railways annually with ties.

Court Decisions Affecting Lumber

Dispute Regarding Payments from a Sale of Logs.—In the case of *Joliffe v. Ash et al.*, which recently came before Judge Morrison at Vancouver, judgment was given in the following terms:

"This is in reality a case of a claim by two rival trading concerns up coast for the payment of their respective accounts for merchandise out of the proceeds of a certain boom of logs belonging to the defendants, Ash, Brown & Bartlett.

"The plaintiff undertook to go good for supplies to be furnished to those defendants, whereupon they signed the following memorandum: 'In consideration of J. Joliffe going security, with W. H. Galley, of Harbledown Island, for our supplies for Harbledown on Vancouver Island, we, Claude Ash, Thomas Bartlett and D. Brown, do agree to allow J. Joliffe to sell our boom and handle the proceeds of same for the purpose of paying W. H. Galley for supplies and any money or goods supplied by himself.'

"The goods were supplied by one Galley and paid for by the plaintiff pursuant to this memorandum. The logs were cut and bound and the defendants, Ash, et al., notified the plaintiff of the fact. He, however, did not succeed in selling them and gave as his reason that the market was against him. They allege that after the lapse of a sufficient period they told him that they intended trying to dispose of the boom themselves and straightway sold them to the defendants, Merrifield & Lloyd, to whom they owed a bill for the amount of the purchase money. I do not think the plaintiff assented to the defendant's selling the logs or even understood the purpose of the conversation, assuming it took place. The plaintiff alleges that he notified the purchasers of his charge on the logs as above set out, and that with such knowledge they made the said purchase in question. From the best consideration I can give the evidence after seeing and hearing the witnesses and closely reading the transcript of the proceedings at the trial, I find that Merrifield was notified by the plaintiff of the claim he had against this boom of logs. I do not accept Merrifield's evidence in denial, mainly from his demeanor in giving evidence and from the inherent probabilities of the surrounding circumstances. Having regard to the locality in which the parties carried on their work and business and the few traders there and their methods of trading, it is a fair inference, that apart from the plaintiff's evidence, Merrifield & Lloyd were put fairly upon inquiry and that they knew that the plaintiff had an adverse interest in the property. I do not think that they have shown that they are bona fide purchasers without notice. In coming to this conclusion I am assisted by the case of *Forest v. Smith, et al.*, a decision of the full court delivered December 11, 1908, and not yet reported.

"There will be judgment against Ash, Bartlett & Brown for the amount of the plaintiff's bill, \$484, and a declaration (1) that the logs in question were bought by the defendants, Merrifield & Lloyd, with the notice of the plaintiff's interest therein; (2) that the logs be sold and the proceeds of such sale be paid forthwith thereafter into court; and (3) that the plaintiff be paid the amount of his claim and costs out of the amount so paid in."

"Aids to Shippers" is the title of a 72-page book containing a quantity of information of value to all engaged in the export or import trade. The book is issued by Oelrichs & Company, of New York, for more than forty years the American representatives of the North German Lloyd Steamship Company, who by reason of long experience are qualified to advise. The table of foreign moneys with United States equivalents, together with weights, measurements, tariffs, Customs requirements, etc., will be found of great value. "Aids to Shippers" will be sent, postpaid, on request to Oelrichs & Company, forwarding department, 5 Greenwich street, New York.

Interpretation of an Agreement to Cut.—The case of the *Laurentide Paper Company v. Baptist* came up on appeal recently in the Supreme Court, and Chief Justice Sir Charles Fitzpatrick delivered an interesting judgment. The point to be determined, he said, was the right acquired under a deed passed between two private individuals conveying the right to cut timber. The appellants on January 25th, 1887, through their agent, Forman, bought from one Reynar, "the right of cutting all soft wood, which is to be found" on the lots in question, "with the right to make all necessary roads and buildings for such purpose (to wit, said cutting) on all the aforesaid lots; for the said Forman to have and cause the said cutting during the period of twenty years from the date of these presents."

Subsequently, said the Chief Justice, Reynar sold the lots to one Vallieres, under whose title the respondent holds. The question at issue is: What is the character of the title given by Reynar to Forman? Did the purchaser, Forman, now represented by the appellant, acquire or take a title in the land or merely a license to cut, not all the standing timber, but the trees or soft wood to be found on the lots mentioned, which when cut and removed became his property? In other words, can it be gathered from the words of the contract that the vendor intended to sell growing timber which might remain on the land, drawing nutriment

therefrom for the benefit of the purchaser during twenty years, or did he acquire a right or license to cut a certain portion of the timber then standing, which right was to be exercised at any time during twenty years? After referring to the evidence and to the precedents applicable to the case the Chief Justice concluded by dismissing the appeal with costs. This judgment showed the Court of Appeal to be in accord with the judgment of Mr. Justice Bosse in the court below, who was of opinion that the right in question was a mere personal obligation.

Membership in a Lumber Company Being Wound Up.—Judge Latchford recently gave judgment in the case of *re Nipissing Planing Mills, Limited, Rankin's case*. This was an appeal by a liquidator of the company in course of winding-up, from an order or report of the local master at North Bay, refusing to place R. Rankin on the list of contributories of the company. Rankin was not one of the applicants for incorporation, and did not sign the memorandum of agreement executed in duplicate, which was filed with the Provincial Secretary, although he signed a memorandum in the same form, under which it was agreed that he made application for shares in the company. Judge Latchford held that although probably Rankin intended to apply for shares, the memorandum which he signed was only an agreement to become incorporated and to take certain shares. It was not an agreement with the company. If it had been followed by allotment of shares and acceptance of stock, Rankin would not have been able to deny that he was a shareholder. But there had not been such an agreement and accordingly Judge Latchford upheld the order of the Master at North Bay in refusing to place Rankin on the list of contributories.

English Imports for 1908 and 1907,

The imports of hewn and sawn timber at the twelve principal ports of the United Kingdom for the years ending 31st December, 1908 and 1907, were as follows:

	To end of Dec. 1908.	To end of Dec. 1907.
London	1,446,626	1,580,658
Cardiff	1,268,773	1,101,114
Hull	820,231	829,378
Liverpool	591,858	640,879
West Hartlepool	567,533	559,011
Manchester (including Runcorn)	515,043	497,932
Newport, Mon.	379,616	330,435
Grimsby	306,956	306,050
Grangemouth	285,315	261,273
Borrowstounness	224,387	190,531
Swansea	196,945	161,738
Gloucester	188,088	178,453

Trade Enquiries.

The Dominion Government Trade and Commerce reports contain the following trade enquiries. Readers of the "Canada Lumberman" may obtain the names of enquirers by writing us, enclosing stamped envelope and stating number of enquiry:

134. Soft birch.—A Manchester firm desires to correspond with Canadian shippers of soft birch.

140. Veneer.—A Manchester firm asks for prices of 3-ply wood veneer from Canadian manufacturers.

143. Pine deals.—A Manchester firm asks for prices of pine deals from Canadian exporters of same.

146. Oak spokes.—A Manchester firm now buying in the United States asks for description and prices of oak spokes from Canadian manufacturers.

147. Pine doors.—A Manchester firm now obtaining supply from United States asks for description and prices of pine doors from Canadian manufacturers.

148. Machinery.—A Yorkshire firm manufacturing wood-working machinery of all kinds wishes to open up business connections in Canada.

153. Logs.—A London manufacturing company is open to contract for regular supplies of logs, with the bark on, in lengths of 6 and 7 or 12 and 14 feet with about 18 inches diameter inside the bark; in birch, ash, elm, white oak, beech, bird's-eye maple and ordinary maple, and invites quotations from Canadian shippers. Logs must be good, sound and straight, and free from knots and strakes.

156. Turned goods.—A London firm seeks supplies of wooden trays in deal, birch and oak, made to dimensions, and also of wooden utensils and other turned goods.

183. Representation.—A Glasgow firm of commission merchants desire Canadian agencies in office desks and supplies, also pulp for manufacturer of paper.

187. Yellow pine.—A manufacturer of picture frames wants to get into touch with dealers in pine suitable for picture frames.

228. Wood squares.—A North of England firm, largely interested in the manufacture and import of all kinds of brush wood, can take regular parcels of clean wood squares of pine, spruce or basswood 48-inch x 1½-inch x 1½-inch and 60-inch x 1¼-inch x 1¼-inch. Shipments to Newcastle-on-Tyne.

Items of Interest from Miscellaneous Points

Rockvale Mills Purchased by Dr. Jamieson.

Dr. Jamieson, M.P.P., of Durham, Ont., president of the Durham Furniture Company, acting for the company, has purchased from Mr. Mark Armstrong, administrator for the estate of the partnership of himself and the late W. A. Armstrong, what is known as the Rockvale Mills property and timber limits connected therewith. The mills are situated five miles north-east of Flesherton station on the Collingwood gravel road. There are nine and one-half acres of land, on which there are about a dozen buildings in all. The limits consist of 800 acres of fairly good land on good road and within easy distance of the mill. Seven hundred acres of the limits are choice, unculled bush, nearly all being hardwood, and well suited to the manufacture of furniture. The price paid was in the neighborhood of \$28,000.

Serious Damage to St. John River Booms.

The St. John River Log Driving Company, of Fredericton, N.B., sustained a heavy loss recently by a sudden thaw accompanied by a prolonged rain storm, which caused considerable damage all over New Brunswick, to bridges and other property. The company's sheer booms are always stored for the winter in a small stream, named the Nash-

St. John River Booms Destroyed by freshet.

waaksis, which enters the St. John River a mile or so above Fredericton. The thaw caused a tremendous rise in the stream and about \$20,000 worth of booms were torn from their moorings and driven out onto the ice of the main river. Heavy sheer booms of 5 timbers, 10x12, bolted side by side, were snapped off by the force of the rush, which lasted but for a few minutes. Some booms were actually driven under the main river ice for some 250 feet. Very little was saved from the wreck and the company is hard at work preparing new booms for the spring run of logs early in May. The accompanying illustration gives a good idea of the damage done.

Cooperage Business in Northern New York.

Mr. Geo. B. Oberton, of North Bangor, Maine, in a letter to the "Canada Lumberman," gives the following account of the cooperage business at St. Regis Falls, N.Y.:

"The present winter's output of hardwood logs in this locality is approximately 23,000,000 feet. These are to be used exclusively for cooperage stock at the St. Regis Falls plant of the Brooklyn Cooperage Company (a subsidiary concern of the American Sugar Refining Company). Four different sawmill firms sold their output of hardwood logs to this company at an average rate of \$9 per thousand, delivered at mill or track. These firms have heretofore sawn their logs into lumber, but owing to the state of the lumber market, find it more profitable to dispose of their logs in this way.

"Wages in the camps have been as follows: 'Short-stops,' \$13 to \$20 per month; experienced men who stayed a reasonable length of time, \$30 per month; teamsters, \$30, with a bonus of \$5 added to each month for those who stayed till the end of hauling operations; \$1.75

to \$3.00 per day for team. This includes board for man and team and use of sleds.

"A firm which has a contract for taking out 3,000,000 feet per year, delivers its logs at the stave mill by a trolley line five miles long. A gasoline locomotive was first tried and proved a failure, on account of the steep grades—in some instances ten per cent. The road is a 3-foot gauge. Two carloads of logs are easily hauled by the motor.

"From a bulletin issued by the Department of Commerce and Labor, I have gleaned the following facts, relative to the slack cooperage industry: Pennsylvania ranks first in the manufacture of staves, followed by Missouri, Michigan, Arkansas, Virginia, Maine, and New York, ranking in the order named. Twenty-one different woods were used in the manufacture of staves. The lowest average value was shown for chestnut staves, \$4.53 per thousand; the highest average value, \$7.96, was reported for ash. Gum wood produced the largest amount of staves, followed by pine, elm, beech, maple and spruce in the order named. Virginia was credited with the largest number of pine staves. These are largely used in the low grade barrel circular packages, etc. Over seven-eighths of the spruce staves were reported for Maine. These are chiefly used for butter tubs, pails, and other circular packages.

"Pennsylvania ranked first in the production of beech, birch and maple staves. Michigan furnished 98 per cent. of the elm staves. Ohio was credited with the largest number of elm hoops."

Washington Lumbermen Campaigning Against Tariff Reduction.

That the presentation of a report by the Ways and Means Committee of the House of Representatives at Washington, does not involve an end of the campaign against the reduction of the duty on lumber is forcibly shown by the steps which are now being taken by Washington State lumbermen. Statistics are now being obtained from Washington and other Pacific coast states to show the extent of the imports into those states from the dairying and agricultural states of the middle West and the heavy shipments of lumber which are sent in return by the Pacific coast country. Figures have been received to show that Washington imports about \$1,000,000 worth of dairy products from Minnesota, about \$1,500,000 worth from Iowa, about \$500,000 worth from North Dakota, and similar amounts from other rich states in the middle West. Figures are being obtained to show the extent of other imports. It is claimed that from Minnesota alone Washington takes from \$3,000,000 to \$5,000,000 worth of products, both agricultural and manufactured.

In return, the State of Washington ships about \$1,500,000 worth of lumber to Minnesota and corresponding amounts to other states in the middle West. The lumbermen claim that as soon as the duty is removed the low grade lumber from Canada will immediately flood the middle Western States of Minnesota, the Dakotas, Wisconsin, Illinois, Iowa and Nebraska, driving out the Pacific coast lumber. The natural effect, it is claimed, will be to drive the trade of the Pacific Northwest up into Canada, and the Middle Western States will lose a rich market for their products. This statement will be laid before the Ways and Means Committee and placed in the hands of all members of Congress.

Estimating Rules for Ties, etc., in Pennsylvania.

In the State of Pennsylvania the number of board feet of lumber contained in ties, poles, posts, etc., is estimated by means of the following table:

Railroad tie	44 board feet
Mine tie	25 "
Telegraph pole	150 "
Trolley pole	100 "
Fence post	10 "
Fence rail	8 "
Mine prop	18 "
Car of mine props	5,460 "
7,500 lath	1,000 "
3,500 shingles	1,000 "
Cord of wood	1,000 "

John G. Hall & Company, wholesale lumber dealers, 114 State street, Boston, Mass., have issued an attractive calendar for 1909, a copy of which they have sent to the "Canada Lumberman." The calendar is mounted on a large light brown board and is decorated with a beautiful copy of a painting of a young lady. The picture is designed in rich greens, reds and browns, which harmonize delightfully and make the calendar an exceptionally welcome one.

In the annual trade review published recently in the "Canada Lumberman," the 1908 cut of Gilmour & Hughson's mill at Hull, Que., was placed at a greater amount than the 1907 cut. Their cut in 1908 should have been stated as about 25,000,000 feet, which was less than they cut in 1907.

Facts vs. Theory in Modern Logging

Good Results Obtained by the Use of Log Loading Machinery—By Norton Mattocks

As necessity is the mother of invention, most inventions are naturally aimed at the "Largest Fixed Expense." In other words, efforts to "Cut Costs" are usually directed at those expenses which form the largest proportion of the finished cost. This being true, it is the more remarkable that, while every other branch of the lumber business has long since been modernized and highly developed, the logging end (which is the most expensive end) has until the past few years, continued in its primitive methods, and only after a radical departure from the old ways has the economic handling of logs been solved.

Because these changes have taken place so recently, and the really successful devices are so few, only those who have studied the question thoroughly and become intimately acquainted with conditions as they exist in the various sections of the country can discuss the subject, even in a general way, intelligently.

Since these labor saving machines for handling logs have been on the market, many arguments have been advanced and much has been written concerning their fitness or unfitness under certain conditions, but facts are facts, and machines which have been theoretically condemned, as impractical under certain conditions, have sometimes proven the reverse in real practice therefore, the only proof is in the actual operation and results obtained.

As few industries vary so much in their local environments as the lumber business, the machine best adapted to the general handling of

be simple in construction and easy for the average man to operate. It must burn either wood or coal and be adaptable to both standard and narrow gauge track.

Fig. 1 shows the general design of the McGiffert, the style of frame, its massive construction and the regular position occupied when propelling itself along the track. Fig. 2 shows the truck frames raised and

Fig. 1.—Regular position of Loader resting on truck frames while propelling itself.

Fig. 2.—Loader resting on broad base with truck frames raised, ready to pull empty car under boom for loading.

logs is that which can and does most nearly adapt itself to all conditions; not in the mind of the theorist, but in actual practice. The best criterion, therefore, as to the comparative efficiency of one device over another would naturally be in the larger number of machines in use, together with the duplications of these machines. If this assumption is correct there can be no question, but what the McGiffert log loader takes foremost place among loading devices. Anyone who has traversed the timber sections of North America and seen the large number of these machines operating successfully, under all conditions, and handling all kinds of timber, will admit this to be the case.

To appreciate more clearly the manifold advantages possessed by this machine, a brief enumeration of the requisites necessary for a successful log loading device together with a short description of the McGiffert design, and its method of operating will be of assistance. In the first place to load logs most economically on cars the loading device must be self-propelling, able to move itself or its cars to any point and at any time. It must also be capable of permitting both cars and loader to pass each other on the same track. It must be able to load under all track conditions as well as all conditions of the territory immediately surrounding. It must be of powerful construction, to guard against all possible breakdowns, as it frequently is a long way from its base of supplies. It must have ample power to handle rapidly any log required of it as well as propel a loaded train when the occasion demands. It must

Fig. 3.—A wet spot in the South.

Skidding from both sides of the track.

the machine supported by the four curved legs, leaving the rails clear to permit the passage of cars under it for the purpose of loading. By running a spotting line over a forward sheave, then under and back to the empty cars in the rear, they may thus quickly be brought forward into position under the boom to receive their load. When in this position the loader rests solidly with a wide base and with stability to skid and load from any reasonable distance. It is thus evident that an entire train may be loaded at one setting or each car in the train may be

Fig. 4.—A McGiffert handling some of the "questionable" kind in California.

loaded at separate points along the track and all without the aid of a switch engine.

Fig. 3 clearly indicates its advantages in wet and swampy country where the use of horses would be impossible. It is at once apparent that with its peculiar construction it is equal to any ground or track condition where logging could be carried on with cars, and figs. 4 and 5 afford proof

as to its power to handle any size logs that could be gotten to it fast enough to keep it busy.

While McGiffert loaders have been, for a few years past, in general use in all other parts of the United States, it was not until early in 1907 that the first machine of this type was installed in the heavy timber region of the Pacific coast. So gratifying, however, were the results following its installation that a second and third machine were immediately ordered by the same people. Prior to the introduction of this loader, all the lumber in that territory was being handled either by the old horse and man method, by donkey engine, or by roll-ways, simply because no better means had thus far proven successful.

The actual accomplishments of these machines, their ability to handle logs advantageously, up to and over six feet in diameter and scaling as high as 3,946 feet, were soon learned in other sections on the coast, until at the present time about 20 McGiffert loaders, besides other special steam logging machines, have supplanted former methods and by their results are opening the eyes of the skeptic and disproving the conclusions of theorists. In this connection it should be stated that while the McGiffert, self-propelling, steam log loader and skidder has made good under conditions previously considered impossible, there is a certain class of timber which can never be handled by any lifting device or moved to mill on wheels. If a machine could load such logs it would not prove profitable, for with such a loading capacity it could load more timber in a day than any logging road or mill capacity could take care of.

As further evidence that the efficiency of this type of machine is not confined to only certain localities in the West, they are distributed in California, Oregon, Washington, British Columbia, Idaho, and Montana. To show what they are doing and how they are valued by their

Fig. 5.—Large Logs in Northern California. Largest Logs scaled 3,946 ft. Total scale 23,330 ft. loaded with McGiffert Self Propelling Steam Log Loader

owners, the following extracts from testimonials should afford food for thought.

The McCloud River Lumber Company, of McCloud, California, who are operating three McGifferts, say in part:

"We will admit that we were somewhat sceptical as to the machines being able to load and handle the extremely heavy timber which we have, but we have picked up with your machine and placed on the cars logs scaling thirty-nine hundred and some odd feet so far, and with no apparent effort for the machine; so far as the ability of the machine to handle the size timber that we have, or I might say almost any one else, has been thoroughly demonstrated to us, and I feel confident that the machine will load any log that we have in our woods.

"Upon the first day, and when the first machine was worked for the first time, we loaded 73,000 feet of logs scattered along the right of way in one hour and twenty minutes, the machine moving and placing its own empties at seven different landings.

"I might add that every statement made by your representative has been fulfilled in every respect, and in most cases more than what was promised, and our every expectation has been gratified.

"We have already wired an order for the third machine and we hope to be able to do more business with you in the future."

In a later letter from the same people is the following:

"We would say that our three log loaders purchased from you last spring have given entire satisfaction and we have not been disappointed in them in any particular."

The Weed Lumber Company, Weed, California, say:

"We are using two McGiffert loaders, purchased during the year of 1907, and consider them very efficient machines. Up to the present time they have loaded all the logs they have been called on to load. We are operating two shifts and cutting about 200,000 feet per day.

"If we purchase further loaders, without doubt they will be McGiffert's."

From Washington, the Lamb Davis Lumber Company write:

"We used your McGiffert for about ten days working off a trestle about twenty feet high across the Wenatchee River. We took out about half a million feet across a dried river bed, then hoisting them onto the cars on the trestle. We found it necessary to move the loader several times during this operation, and found that this could be done in a very few minutes. We are very much pleased at losing so little time moving. The machine was not situ-

ated so that we could put out a guy line, except to attach it to the trestle itself, but we were enabled to haul these logs, some of them as large as 3½ feet in diameter and 18 feet in length, with no trouble at all. We are very much impressed with the operation of this machine, and feel convinced we have made the best choice on the market."

The George Palmer Lumber Company, of LaGrande, Oregon, say:

"We have had one of your McGiffert loaders at work in our logging camps since last November, and are pleased to state that it has fully met our greatest expectation in every way, handling the logs quickly, safely, and economically.

"Our company completed the construction of its sawmill plant and commenced active operations only last fall, but for a few weeks previous to having our McGiffert loader set up, we used horse teams to load our logging cars. In this connection will state that those few weeks will always stand out as a mountain on our cost record, as compared with the present cost of logging operations."

Another McGiffert at Loyalton, California, operated by the Marsh Lumber Company, is spoken of as follows:

"We cannot speak too highly of your McGiffert loader because it has done and is doing such excellent work in about half the time, or less, than the former way of log loading. It has saved us money from the start. The self-propelling feature and method of spotting the cars makes it the ideal outfit for anyone who has many logs to handle and wants it done the cheapest way. It handles any timber and is as near indestructible as such a machine could be. If we needed another machine we would not hesitate to duplicate our order to you. We cannot speak too well of it."

The Arrow Lake Lumber Company, British Columbia, shortly after receiving the loader, say:

"We do not for a moment doubt that we will be entirely pleased with the McGiffert."

The Northern California Lumber Company, Silt, Washington, say:

"We believe that the machine is going to be everything that you claim for it and, as far as we can see, it is built along lines which should give it a long life."

If what the McGiffert log loader has actually accomplished under varying conditions and at widely separated points is not positive proof of what it can do elsewhere under similar conditions, then facts mean nothing and theorists will not be convinced.

A Good Outlook in the Prairies.

The situation in the lumber business in central and western Canada is improving. Indications are for a good season, with probably better prices.

Everyone connected with the lumber business at the present time is waiting and hoping for an early spring. If the spring opens out early the building trades will go forward with a rush. At present writing, the architects in Winnipeg and at most points throughout the West are very busy with plans and preliminary sketches for buildings of all classes. There seems to be a change this year in the class of buildings to be erected, and very few apartment houses are projected at the present time. The plans seem to run more into business buildings and stores, with a few residences scattered here and there.

The price of material has not gone up to any great extent and the chances are very favorable for a splendid year from the builders' point of view. Lumber is plentiful and can be obtained anywhere at a reasonable price. Money is easier and the loan companies have already indicated a desire to advance same at a favorable rate of interest upon legitimate propositions.

Taking everything into consideration the year is progressing just as was expected by those who looked forward to a prosperous year.

The building totals for 1908 show that Western Canada was not only ahead of the United States, but also ahead of Eastern Canada in the pro-rata amount of actual building accomplished. This, in the face of many obstacles, shows that the march of progress in Western Canada has not been changed to the degree it has obtained in the older settled districts. The building totals show that as a whole, the reduction was comparatively small, while in some districts the increase was far in advance over 1907.

The year has started off with a splendid record for the first two months, and it is really wonderful the number of permits and building projects that have been taken out and gone ahead with during the cold weather which we have experienced. Up to the present writing, however, there has been no general resumption of building activity, such as we saw in 1905 and 1906, but we expect it, nevertheless, and the next two or three months ought to tell the tale.

The retail lumbermen are able and willing to supply material at the lowest possible rate and they are looking forward confidently to a good year's business.

If the architect is busy, the builder is likely to be busy later on. The lumber and supply trades will be made busy, and everything will be prosperous.

This year ought to mean better average profits to the builder, who will be able to figure work on a fair percentage on each work, rather than be striving on some work to make up for the obvious under-calculations of the predecessors.

THE MACHINERY WORLD

What Manufacturers of Logging, Sawmill and Woodworking Equipment are Doing

An Automatic Woodworkers' Grinder for General Grinding Purposes.

A. J. Lindsay, 55 Gould street, Toronto, has just placed on the market "The Lindsay Automatic Universal Woodworkers' Grinder," for all grinding purposes in woodworking establishments, such as sharpening saws, knives, etc. The machine is built either in a combination for

ball bearings, and by the use of a sliding weight the knives can be balanced without removing them from the grinder. As is shown by Fig. I, the machine contains adjustable cushion guards, which may be placed in any desired position. These guards fill two important functions, preventing the flying of grit in the operator's face, and protecting his life in case of a bursting wheel.

The table of the saw sharpener moves automatically by an eccentric

Fig. 1—The Lindsay Automatic Universal Woodworker's Grinder.

general grinding of both saws and knives, or independent machines are supplied, one for planer knife grinding, another for saw sharpening, and a third for moulding and sticker knives and the general grinding of light tools.

The Universay machine, as shown in Fig. 1, illustrates the grinding of a planer knife at one end of the machine, and saw sharpener at the other. Both of these can be operated automatically at the same time,

motion at right angles to the knife bar, which carries the saw with it, as shown in illustration. The machine can be adjusted to suit any size of saw, or any pitch of tooth, and tilted to suit any bevel for cross cut saws, or arranged to sharpen band resaws.

Figure II. shows the knife bar and saw sharpening device with carriage of knife bar turned down and a steady rest bolted on where the knife comes off. Fig. II. also shows the knife wheel removed and

Fig. 2—The Lindsay Automatic Universal Woodworker's Grinder.

or independent of each other, as desired. The carriage travels automatically on a square steel bar driven from reversing belt in rear of machine. The knife bar on the left end of the machine, as shown in Fig. 1, contains a water jacket, which, when the knife is bolted on, renders it impossible to burn the knife and draw the temper. This is an entirely new feature in the grinding of knives, and Mr. Lindsay claims that it has never before been adopted by any makers of grinders. At a public demonstration recently, given at the works of the Martin Pump & Machine Company, Toronto, this feature was clearly demonstrated to be practical. The knife bar also swings on centre at the end brackets on

wheels for moulding and sticker knives substituted. This does not require any removing of parts excepting the wheels to convert it into this class of machine, which can be done instantly. Fig. 11. also shows the cooling tank placed in the shelf at the centre of the machine for dipping knives.

A practical demonstration of this machine was given on Feb. 17th at the works of the Martin Pump & Machine Company, Toronto, where it was seen by a number of practical mill men, and a machine was at once bought by the Toronto Junction Lumber Company, who recently equipped large planing mills. It is now in daily use there.

Notes of the Machinery Trade

Allis-Chalmers-Bullock, Limited, Montreal, have favored the "Canada Lumberman" with a copy of their 1909 calendar, which is one of the most attractive calendars that has reached us. It is handsomely designed in a rich deep brown color and contains a large calendar block, making it serviceable for office use. It is decorated with a cleverly conceived and well executed picture in colors, entitled "The First Engineers." The picture portrays several beavers felling trees and piloting logs across stream for the purpose of building a dam. Allis-Chalmers-Bullock, Limited, manufacture all kinds of hydro-electric power machinery as well as electric motors, transformers, dynamos, switchboards, steam turbines, gas engines, Corliss engines, water wheels, mining, crushing, cement, flour mill and sawmill machinery, hoisting engines, turbine pumps, etc. The painting on the calendar is from the brush of Mr. Arthur H. Hider, a well known Canadian artist, and was designed especially for Allis-Chalmers-Bullock, Limited.

The Berlin Machine Works, Beloit, Wis., whose Canadian plant is at Hamilton, Ont., have issued one of the finest and handsomest catalogues which have reached the "Canada Lumberman" for some time. The catalogue deals with the Berlin woodworking machinery, and by means of numerous excellent illustrations and carefully prepared descriptions, gives one a splendid idea of the Berlin sanders, sizers, planers, moulders, surfacers, band resaws, pony band-mills, edgers, rip-saws, cut-off saws, glue jointers, shapers, knife grinders and other tools. The catalogue is published upon fine glazed paper and bound in a stiff cloth cover which makes it a much more substantial publication than the usual class of catalogue. All who are interested in woodworking machinery should send for a copy, and at the same time mention the "Canada Lumberman."

The Georgian Bay Engineering Works, Midland, Ont., have published an attractive catalogue of their hoisting machinery. This company has become well known for its endeavor to produce substantial and practical machinery. Its designs have met with the approval of many of the largest users in Canada, as evidenced by the large number of repeat orders received. The company devote their entire time and

attention to the manufacture of hoisting machines and accessories. A copy of this catalogue will be of much interest to those who make use of this class of machinery and they will be able to obtain it by writing to the company.

Jeffrey conveying machinery for sawmills, pulp mills and wood-working plants, is attractively described in a special catalogue, No. 57E, which has been issued by the Jeffrey Manufacturing Company, Columbus, Ohio. The catalogue is extensively illustrated and attractively gotten up. It will prove interesting to all who are concerned with this class of machinery.

Mr. Donald M. Silass, of Eel River, N.B., has recently ordered from the Robb Engineering Company a stationary sawmill, consisting of: A 70 horse-power return tubular boiler with Dutch oven setting, a 70 horse-power Robb-Armstrong stationary engine, a No. 4 rotary mill, etc.

Mr. Joseph Moulton, of Burin, Nfld., has recently ordered a 35 horse-power Robb-Armstrong engine, 35 horse-power Robb-Mumford Brady portable boiler, and a No. 4 rotary mill, trimmer, etc., from the Robb Engineering Company, of Amherst, N.S.

An amusing mistake was made by John Oliver, M.L.A., in his arraignment of the British Columbia Government's policy in the House at Victoria recently. He attacked the Government for parting with land at a nominal rental, the timber on which was worth \$100,000 an acre, and quoted a Mr. Sutton as his authority. Mr. Sutton, in explanation, said that what he did say was that the land referred to carried 100,000 superficial feet to the acre. Mr. Oliver himself later explained, according to the "Victoria Colonist," that the timber was worth \$100,000 a square mile. The truth is that timber in British Columbia under license will not run on an average more than from 30,000 feet to 40,000 feet on acre, although there might be choice sections here or there which would contain 100,000 feet to the acre. A square mile of timber land often contains a large proportion of rock and barren land. Timber near the water and easily logged would be worth as high as \$1 a thousand, but timber generally would not average more than from twenty-five to fifty cents a thousand. Out of curiosity a timber broker's list was recently studied to get the average price of timber for sale. It was found that a fair average would be from \$5 to \$8 an acre, but in special cases as high as from \$15 to \$35 has been paid. At \$8 an acre a mile of timber would be worth \$5,280.

Position Wanted

WANTED SITUATION AS BAND SAW filer, 18 years' experience in cutting all kinds of timber. Can send good references. Address FIFER P. O. Box 215 Midland, Ont. 6

CAPABLE ACCOUNTANT AND OFFICE Manager of twelve years thorough and detail, ed experience in wholesale and manufacturing lum- ber business, wishes to buy working interest in saw- mill operation where his services can be used. Prefer B. C. Box 682 CANADA LUMBERMAN, Toronto. 9

Position Wanted

MILLWRIGHT AND BLACKSMITH, ALSO round saw filer and hammerer. Box 698 CANADA LUMBERMAN, Toronto. 9

Wanted

POSITION, AS SALESMAN BY EXPERIENCED man, good connection Toronto and West. Box 704 CANADA LUMBERMAN, Toronto. 6

Wanted

EXPERIENCED PRACTICAL SAW MILL Superintendent wishes to secure sawing contract in large mode. n mill with good future assured. Address "Results" Box 703 CANADA LUMBERMAN, Toronto. 9

Wanted May 1st, 1909

POSITION EITHER BOOKKEEPER, SALESMAN, Yard Manager, Foreman or Supt of woods operations. Sixteen years experience from stump to consumer, past three years Ass't Manager of lumber firm, organized same. Evolved accounting and report system. Any intelligent proposition considered. Record will bear strict investigation. Box 700 CANADA LUMBERMAN, Toronto. 6

WANTED-EMPLOYEES**Wanted**

LUMBER SALESMAN AND SHIPPER. State experience and salary expected. Box 29, Tottenham, Ont. 9

Wanted

FOUR STRICTLY HIGH CLASS SHINGLE sawyers for Dunbar machines. Steady work the year around. Mill heated during winter. Commence in May. NEPISQUIT LUMBER CO. LTD., Bathurst, N.B.

Wanted

FIRST CLASS ACCOUNTANT, CAPABLE of taking charge of large lumber manufacturing office. One thoroughly conversant with cost systems preferred. Address drawer "D" Cranbrook, B.C. 7

Wanted

BY WHOLESALE LUMBER YARD TORONTO, a smart young man who has a knowledge of hardwood culling. Salary \$2.00 per day, steady employment with excellent chance for advancement. Box 683 CANADA LUMBERMAN, Toronto. 11

Cordwood Contractor Wanted

WANTED-CONTRACTOR TO GET OUT from 40 to 50 thousand cords hardwood annually for charcoal plant. Must have previous experience in operating on large scale with modern appliances. Address "Cordwood Contractor", Box 697 CANADA LUMBERMAN, Toronto. 9

Wanted

STRICTLY a MILLWRIGHT, WHO CAN take complete charge of moving and enlarging large sawmill and take charge of same when finished. Must have gilt edge references. Location on Lake Huron. Apply Box 701 CANADA LUMBERMAN, Toronto. 8

Wanted Wordworking Shop Foreman

EXPERIENCED MAN TO TAKE CHARGE of New General Woodworking Factory and Yard. Do not apply unless competent and acquainted with best modern shop practice. D. G. LOOMIS & SONS, Montreal. 7

Wanted

MAN WITH PORTABLE SAW MILL TO saw about 250M of mixed hardwood and pine in the township of Grimsby. Apply Box 702 CANADA LUMBERMAN, Toronto. 6

BUSINESS OPPORTUNITIES**Selling Agency Wanted**

ADVERTISER, AN EXPERIENCED LUMBER SALESMAN, wishes to secure a selling connection on commission basis for Montreal and vicinity, of a large mill manufacturing spruce or pine, must be of capacity to assure grades and fill orders promptly. "ADDRESS AGENT" B34 Board of Trade, Montreal. 7

Splendid Opportunity for Lumber Business

FOR SALE. SAWMILL, COMPLETE also Planing Mill, Lumber Yards, General Store and Post Office, Timber Limits, (Log Camp in operation) improved Streams and Booming Grounds situated on main line of Canadian Pacific Ry. Store doing good cash business and no opposition. Retail lumber business, (through yards, already established in nearest towns). This is a rare chance to get into the lumber business in New Ontario. \$15,000 cash, balance easy terms. Apply "New Ontario", care of Box 691 CANADA LUMBERMAN, Toronto. 6

MISCELLANEOUS

WE ARE IN THE MARKET FOR CROWN GRANT Timber Limits. Must be well located and good timber. Either British Columbia or Pacific Coast. JOHN C. SPRY, Dealer in Timber Lands, 1230 Corn Exchange Bank Building, Chicago, Ill. 11

HAVE YOU ANY STOCK WHICH YOU wish to sell? If so, make the fact known to probable buyers by placing an advertisement in the Wanted and For Sale Department. Address, CANADA LUMBERMAN, Toronto.

For Sale

PLANING MILL AND RETAIL LUMBER Business in best locality in Ontario. Everything complete and a bargain. Apply 681, CANADA LUMBERMAN, Toronto. 6

For Sale

TIMBER LIMIT ON LAKE HURON, CONTAINS 1,700 acres mixed timber, sawmill, dock, etc. Plenty more timber can be bought. Will be sold cheap as proprietors have other business. Box 47, Hepworth, Ont. 8

Wanted

TO PURCHASE A BAND SAW MILL capacity 30,000 feet per day or would let contract to saw pile and ship saw from three to five million feet lumber per season for a term of years. We have good mill site near town of Pembroke. Address Box No. 9, Westneath, Ont. 6

For Sale

OVER 1000 ACRES OF TIMBER LAND, with about 100 acres of clearing on all lots, and some buildings, and lots of cedar, hemlock, birch, maple, oak, pine, and other merchantable timber, including a good mill site on Thessalon river close to a railway with good shipping facilities. Lots all patented and most cover the mining rights. Splendid chance to move a good saw mill, as other timber can be had also. Price only \$3,000. Apply to P.O. Box 100 Bruce Mines, Ont. 7

Saw Mill and Billion and a Half Feet Timber Limits For Sale

TO CLOSE AN ESTATE A COMPLETE sawmill plant and timber limits are offered for sale. Situated on Pacific Coast, British Columbia. Limits estimated to contain one and a half billion feet of red and yellow cedar, spruce, fir, larch and hemlock, all within 3 miles of tide water. Plant consists of saw and planing mills, dry kilns, box and sash and door factories, etc., large vessels can load direct from yard. For price and terms address —F. E. LEUSHNER, 75 Yonge St., Toronto, Ontario. 6

Important Sale of Valuable Timber Limits, Saw Mills, Logs, etc.

SEALED TENDERS WILL BE RECEIVED up to and including TUESDAY, THE FOURTH DAY OF MAY, 1909, for:

1. The timber berths comprising the township of Roberts and all of the township of Kitchener, with the exception of three square miles thereof, in the district of Algoma. These berths also are virgin limits of excellent white and red pine very convenient to operate and close to the railway and will be sold together or separately.

2. Timber berth known as "107" on the Spanish river in said district, the license therefor including all woods. This is an excellent berth convenient both to railway and the Spanish River.

Tenders will also be received up to and including THURSDAY THE FIRST DAY OF APRIL, 1909, for:

3. The saw mill property at Brennen Harbour near Spanish Station on the C.P.R. The mill is equipped with one double cutting band saw, circular saw and gang edger, lath mill, etc., and has a daily capacity of about 80,000 feet (10 hours). There are excellent booming facilities for logs at the mill, the harbour being well sheltered from storms and also very convenient to the mouth of the Spanish River. Vessels of deep draught can be loaded at docks of mill where lumber is piled. There are all necessary boarding houses cottages for men, and other outbuildings on the property.

4. The Tug "Hazard".

5. About 42,000 pieces of red and white pine saw logs at the Brennen Harbour Mill and in Spanish River.

6. The saw mill property at Cache Bay at the mouth of the Sturgeon River near Cache Bay on the C.P.R. The mill is equipped with a circular saw, lath mill and other necessary machinery and has a daily capacity of about 40,000 feet (10 hours). Good booming facilities for logs and railway siding on the property.

7. Stock of logs now being put in territory tributary to Cache Bay Mill.

The highest or any tender not necessarily accepted. For terms and further particulars, including estimates, apply to:

Review of Current Trade Conditions

Ontario.

The same conditions prevail throughout the lumber trade in Ontario as have been prevalent for several months past. Dulness and listlessness are the characteristic of the trade. Small orders are going through all the time, but none are of sufficient volume to warrant manufacturers in looking forward to anything of an improvement. The situation is rendered still less promising by the extensive competition of southern pine, the price of which is expected to go even lower. The cause of this, is the fact that a great many mills in the Southern States are in the hands of receivers, and many of those which are in operation are under a bond of debt to the bank whereby they must move a certain amount of lumber to pay off the bonds. This condition of affairs, together with the present market demand, are such that it is useless to force anything on the market unless at reduced prices. There are practically no price changes to report in western and central Ontario markets. At Ottawa, prices are generally about steady, with a slight decline in good pine sidings, $1\frac{1}{4}$ and $1\frac{1}{2}$ -inch x 8-inch and up, which are selling now from \$48 to \$54, a decline of from \$1 to \$2 from the last quotations. A decline of from \$2 to \$4 has occurred in 2 x 7-inch and up, which is also selling at \$48 to \$54. Trade in the Ottawa valley is experiencing a dull spell similar to that which is reported from other parts of Ontario. It is expected, however, that there will be more extensive shipments by the end of March. The railway companies are expecting this and are making preparations for it. Lumbermen, however, do not look for much improvement, at least until early in April. In spite of the weakening for the better grades of pine, manufacturers believe that pine and spruce are generally firm. Shingles are quite dull. Lath have been only in slight demand, but it is expected that the building season will soon improve conditions in these lines.

Eastern Canada.

The dulness which seems to be prevalent in the lumber trade throughout Canada is strongly noticeable in the Eastern Provinces. Spruce lumber is quite inactive, although there are a few enquiries coming from United States points. Some of these are from Boston, where it is reported that prices are a little firmer with a steady market and a tendency towards higher prices. Some of the larger manufacturers will not accept frame orders for Boston delivery within a few months at less than \$26 base. Random is also showing more firmness in Boston in spite of the fact that demand is inaccurate. There is not much demand for boards at Boston. New York and Boston report a better demand for lath. Prices for $1\frac{5}{8}$ -inch are still at \$3.90 to \$4, and shingles, though inactive, are firm at \$3.85 to \$3.90 for the best cedar extras. Reports from St. John show that the customary quiet condition at this time of year is in force. Shipments are smaller than usual and manufacturing has scarcely commenced. It is noticeable, however, that local stocks are disappearing, especially cedar shingles. "American" spruce deals have ceased offering and spruce lath are quite scarce. "English" spruce deals are also hard to find. This condition is leading to a general belief that a better condition will prevail shortly. This is based largely upon reports that the English markets show a decidedly upward movement. As high as \$16 per thousand superficial feet f.o.b. steamer lath at St. John are selling at about \$2.75 for dutiable.

Great Britain.

Advices from London show that the lumber business is still very dull. Deliveries are small and trade suspensions are making operators

careful. Liverpool reports a slight improvement, though it is questionable whether it will be permanent. Brokers and merchants alike are suffering from a pessimistic conception of affairs. The spruce deal market at Liverpool remains unchanged. Small parcels of about 100 to 200 standards which recently arrived by regular liners from St. John and Halifax, with the ordinary specification of 60 per cent. of 3 x 7 and 3 x 8, balance wider, sold on the basis of £7 15s. per standard c.i.f. to the wholesale houses. They were rapidly disposed of from the steamers' side. Manufacturers of spruce deals in New Brunswick and Nova Scotia are reported on the Liverpool market to be holding out for high prices for the coming season. Canadian pine deals in Liverpool are still firm. Stocks are in the hands of strong importing firms, who show no tendency to reduce prices, in the face of the strong attitude of the Ottawa district producers. At Manchester, depression is still the order of the day. Prices, however, are keeping up very well. The Manchester liner vessels from St. John and Halifax are taking very little spruce this season. Stock deliveries continue very light as a result of the depression in trade and the financial trouble. No immediate revival is expected at present. Glasgow reports a lull in business. Prices are, however, fairly steady and anything in the way of a fair demand would cause a sharp rise in prices. Shipbuilding requirements are improving. The actual business transacted at London from day to day continues to be rather less than a year ago. More forward selling, however, is taking place. Prices are firmly maintained for spot goods in London and this is causing shippers to hold firm ideas as to future prices.

United States.

The approaching opening of spring trade is having the effect of settling the trade conditions to some extent. The expectation that 1909 would be a record year is giving way somewhat to a feeling that a fair average season is in store. Building permits throughout the United States show an increase during January and February of 118 per cent. over previous year, and retail yards are led to expect an active demand for building materials, as soon as weather conditions are settled enough to permit of active building. Stocks in the country yards are not large. The impassable condition of the country roads is doing much to reduce the demand in retail yards. At Chicago, stocks of white pine are broken, especially in dimension sizes. No. 3 and poorer are in plentiful supply and are only selling slowly. White pine lath are in good demand and 4-foot No. 1 are very scarce. Buying of white cedar on a large scale is not expected in Chicago until spring opens in earnest. The demand for fir in Chicago remains quiet. The railroads and car builders are making very little enquiry; prices, however, are showing a tendency to firmness. Dealers do not look for much change for several months to come. The demand for red cedar shingles at Chicago has been light for some time. White pine and hemlock are scarce and good prices are being asked with a tendency to advance. At New York there is practically no demand for Northern pine and the indications are rather poor for an early resumption of orders. At Buffalo white pine dealers still report a quiet trade, but it is expected that when the bad March weather has passed, plenty of business will be offered. Cooperage stock at Buffalo is passing through the duller part of its year so far as slack cooperage is concerned. It is even a little worse than usual on account of the dulness in demand for the flour trade. Prices, however, are reported firm, although some consumers claim that they can buy practically at their own prices. In Chicago cooperage stocks are large and demand is light. Manufacturers expect a declining market.

Market Correspondence

The Usual March Dulness in Eastern Trade.

St. John, N.B., March 10.—The industry and trade in this direction is experiencing the quietest month in a year. This condition of quiet usually prevails at this time of year and is due to the fact that, while manufacturing has not begun to any extent, shipments are fewer than at any other time, as stocks of all kinds of long and short lumber are lighter than at any other time. The lightness of local stocks is becoming more and more noticeable week by week; cedar shingles are practically cleaned up; there are no "American" spruce deals offering; the available quantities of spruce lath are by no means heavy; and the holdings of "English" spruce deals are dwindling rapidly.

Great activity still reigns in logging circles. Conditions continue remarkably favorable and the work of hauling from off the yards is progressing rapidly. Along the head of the St. John River there is from two and one-half to three and one-half feet of snow, the depth varying somewhat in different sections. On the Miramichi and Restigouche rivers somewhat similar conditions prevail and, speaking generally of the whole province, it may be said that the present is quite as favorable as any logging season of the past twenty years, both as regards the volume of logging operations and conditions bearing upon the getting of logs.

In the markets there is little activity and the attention of local interested people is devoted chiefly to the future. The general feeling in regard to the most important lines seems to be of an optimistic nature. Particularly is this true of "English" spruce deals. It is an accepted fact that the next two months will bring important changes in the trade in this line. Local manufacturers are looking forward to a much better year than was experienced in 1908. This means, of course, better prices and a steadier demand. Locally there is little trading in "English" spruce deals, but a careful review of the local situation leads to the conclusion that local dealers will be forced to pay considerably higher prices during the late spring than has been the case for two years past. During the month of February transactions in "English" spruce were few and of an unimportant nature. Reports from English agents of local dealers would seem to justify the pronounced feeling of optimism which is prevalent among local lumber trade people. These reports state that a somewhat similar spirit is uppermost in that direction and that the markets have a decided upward trend.

Quotations on "English" spruce deals show considerable variety, depending upon the quantity involved, the specification and the time of delivery. Some parcels of an ordinary specification which have been shipped by the winter liners have brought as high as \$16 per thousand superficial feet f.o.b. steamer.

While it is difficult to name a price that will apply generally, it would be safe to say that an enquirer would receive no lower quotation than \$15 on a specification containing 50 per cent. sevens and eights, 35 per cent. nines and 15 per cent. elevens and wides, f.o.b. steamer here, for delivery during the present month or during the month of April.

The spruce lath trade has shown little activity during the past month. Nearly all the local stocks in this line have been disposed of, and there are not more than two millions to be found on the local wharves or at local yards. All of these are slab-lath and the much greater part are dutiable. The local value to the seller of the dutiable goods in this line is very close to \$2.75 per thousand.

Shanty Operations Ending on the Ottawa.

Ottawa, March 11.—Lumber manufacturers of Ottawa and district are giving most of their attention to the closing of shanty operations. The log hauling will be about completed this week. On the Coulange River, where James Davidson took out some 10,000,000 feet of lumber this winter, the logs have all been delivered to the edge of the stream and will be floated down to his mill at Davidson, near Fort Coulange. He expects a favorable drive. About 30 teams per day are coming down from the Rouge and Dumoine rivers, chiefly from the E. B. Eddy Company limits. The shanties of J. R. Booth, W. C. Edwards Company, and the Hawkesbury Lumber Company are all in the process of breaking up. J. R. Booth has brought down 1,400 carloads of pine logs by the G.T.R. from Madawaska, and with the logs already in the Ottawa River he will be able to operate the coming summer practically independent of the season's drive. He expects to get 400 or 500 more carloads by the end of spring. To mill owners dependent to a great extent on the 1909 cut of logs, the driving outlook was never more favorable. The swamps in the Upper Ottawa district are full of water from recent rains, and all the homecoming shanty men confirm the statements already given in the "Canada Lumberman" that the whole Temiskaming district is under the heaviest blanket of snow it has known for many years. The work

has just commenced on conserving dams in that region, which will prevent the usual immense waste of water of the spring freshets.

As the season advances lumbermen will derive benefit from numerous improvements they have made for holding logs in bays along the Ottawa River. It is expected that the owners of big quantities of logs will be able to keep their property from blocking the passage of the smaller drives, by means of the newly made storage places. The work of conserving the Upper Ottawa waters, although begun, is not proceeding fast enough to satisfy lumbermen and factory owners dependent on water power. The Ottawa Board of Trade, under the new presidency of Mr. Peter Whelen, manager of the Sheppard and Morse Lumber Company, is forcing the matter on the attention of the Dominion Government on every possible occasion.

The announcement that the reduction of the American tariff on Canadian lumber is to be only 50 cents off the existing \$2 per thousand is not regarded in the same light by all Ottawa valley producers. One of the largest exporters of Ottawa told the "Canada Lumberman" that a 50-cent modification would practically mean no stimulation to trade. There had been more advantage, he believed, from the mere suggestion of wiping out the whole \$2 duty. The Canadian manufacturer figured that he would at least get one dollar more in his sale, but when there is only fifty cents of a margin to be apportioned between seller and buyer the encouragement to trade will be scarcely perceptible. A smaller shipper takes a more hopeful view of the tariff reform. It will simply mean, he says, that a man can accept fifty cents less on a thousand feet of lumber than before. Frequently, he added, an order of box lumber, shipping culls or other common variety was cancelled for no greater difference than fifty cents. Even a half-dollar additional profit, he maintained, would add considerably to receipts of local dealers or manufacturers during a season of active business. A representative of the J. R. Booth firm expressed a good deal more satisfaction in the removal of the lumber duty than the proposed cut of from six to two dollars per ton in paper, of which the firm is an equally large producer. In respect to the changes recommended in pulp and paper, Ottawa valley manufacturers are all suspicious that the United States will insist on a counteracting concession by Canada that will be hurtful in the end.

The trade is passing through a dull spell. Railway companies are preparing for more shipping about the middle of March. Lumbermen drawing their conclusion from the dearth of enquiries, believe there will be no large movement of lumber, at least until April sets in. There has been a weakening in quotations for the upper grades of pine, but large manufacturers maintain that the market for pine and spruce, generally speaking, is firm. The present quietness in outdoor building makes the shingle market extremely dull. There have been few sales of lath in the last fortnight, but manufacturers are not discouraged because the season promises to be very brisk in building. Some large contracts have recently been closed for 12-inch lumber at last year's prices. The transactions are not regarded as significant of any particular turn in the trade, as the purchasers were the same as last year and bought as a matter of necessity in order not to let the supply get into other hands.

Exports from Eastern Provinces to Liverpool.

H. W. Lightburne & Company, Liverpool, Eng., report that their shipments from St. John and other ports in New Brunswick and Nova Scotia were as follows:

	1905	1906	1907	1908
St. Johnsquare feet	44,640,316	71,827,340	70,294,047	43,727,541
Other ports	23,548,675	50,693,435	25,093,782	43,750,449
	68,188,991	122,520,775	95,387,829	87,477,990

The diminution shown on the 1907 aggregate is, they believe, fairly representative of the total shipments from all sources in New Brunswick and Nova Scotia. The importance of this diminution lies in the fact that while 1908, owing to the financial collapse, and consequent stagnation in the United States, might have been expected to have been a year of large exports to the United Kingdom, it, on the contrary, resulted otherwise. It is now confidently predicted that a still further reduction in the export to Great Britain will be experienced in the ensuing season, attributable mainly to the revival of business in the United States and to the rapidly increasing demand in Canada for local consumption.

New Officers for Forestry Association.

The tenth annual meeting of the Canadian Forestry Association was held in Ottawa on Thursday, March 11. On account of the recent special convention held in Toronto no set papers or addresses were presented. The meeting was devoted solely to the transaction of general business. Mr. Thomas Southworth, of Toronto, was elected president, and Senator Edwards, vice-president. Hon. Frank Cochrane was elected provincial vice-president for Ontario, and Mr. J. B. Miller, Toronto, was elected one of the vice-presidents. The Canadian Society of Forest Engineers re-elected Dr. Fernow, of Toronto, president.

EDGINGS

Ontario

Donald Duff, of Esquesing, Ont., will remove his sawmill to Erin, near New Liskeard, Ont.

Heintzman & Company will shortly erect an extension of their piano factory at West Toronto.

The North American Bent Chair Company are making extensive additions to their buildings at Owen Sound.

Hart & Carlaw, who recently took over the old Scott planing mill at Galt, are equipping it with modern machinery.

Tickell & Sons' furniture factory at Belleville, Ont., was damaged by fire to the extent of \$2,000. Covered by insurance.

The Brantford Carriage Company, Limited, have been authorized to increase their capital stock from \$100,000 to \$200,000.

Ridout & Company, furniture dealers, Kenora, Ont., will shortly commence the erection of a large addition to their premises in that town.

The Erie Basket Company, of Leamington, have recently added to their plant by installing machinery for the manufacture of all classes of handles.

Tomiko Mills, Limited, have been incorporated to operate a sawmill on the Temiskaming & Northern Ontario Railway. G. B. Ferguson, of Renfrew, Ont., is president.

The Durham Furniture Company have purchased the Rockvale sawmill and veneer mill, and timber limits near Flesherton, Ont. The price is said to have been \$28,000.

E. J. Taylor, a member of West, Taylor, Bickle Company, Norwich, manufacturers of brooms, has withdrawn from the partnership and will manufacture these articles in Montreal.

The Victoriaville Furniture Company have had to run overtime three days per week to keep up with orders. They have just added a two-storey wing, and are installing additional machinery.

The Mitchell Cooperage Company, of Chelsea Green, a suburb of London, the directors of which control a large basket factory in Ridgetown, intends establishing a basket industry on a large scale.

It is stated that Hon. W. A. Charlton and a party of Toronto capitalists are closing a deal for a tract containing something like 500,000,000 feet of mahogany and cedar, situated in Chiapas, Mexico.

The Toronto Show Case Company are preparing plans for the erection of a large factory on Carlaw avenue. They now employ about fifty hands on Derris street, but will employ 200 when the new factory is completed.

The McLeod Pulp & Paper Mills have started to manufacture boxboard at Milton, Ont., and intend to manufacture paper in the near future. The pulp mills of this company are turning out about 80 tons of pulp per day.

The Kaufman Lumber Company are erecting a sawmill at Shawanaga, in the Parry Sound District, where they have a quantity of birch and hemlock to cut. The company is composed of Louis and John Kaufman, of Cassels, Ont., and Wm. Swan, lumber dealer, Bright, Ont.

Among recent incorporations is that of the Hespeler Machinery Company, Limited, Hespeler, Ont., capital \$100,000. To manufacture and sell wood-working machinery and tools, etc. The incorporators include: W. G. Charter, of Hespeler; T. F. Campbell, and M. A. Secord, of Galt, Ont.

The Durango Land & Timber Company, Limited, Toronto, has been incorporated with a capital of \$100,000 to carry on a manufacturing business in lumber and all articles made of wood. J. S. Lovell, 119 Madison avenue, and S. G. Crowell, Bank of Commerce Building, Toronto, are among the incorporators.

Prohibiting the cutting of lumber on the Ontario Government forestry reserve at Gow Ganda results in the miners of that settlement paying \$90 a thousand for lumber formerly bought at \$40. There are 5,500 people in the district and the nearest railway is forty miles distant. The lumber has to be hauled from that point over very bad roads.

January and February are reported by Edwards & Company, middlemen of Ottawa, to be much better for trade than the corresponding months last year. The volume of business does not come up to 1907 and they, like other traders, look for larger shipments to the United States. The Canadian branch of the Shepard & Morse Company, Boston, is shipping considerably across the border.

Recent Ontario incorporations include: Sanders & Bell, Limited, St. Thomas, Ont., incorporated as carpenters, contractors, and builders, and to manufacture and deal in woodenware, building materials and lumber, capital \$40,000, incorporators, A. R. Sanders, F. C. Bell, E. C. Sanders and others, all of St. Thomas, Ont.; Perfect Skewer Company, Limited, West Toronto, Ont., incorporated to manufacture lumber and builders' supplies, capital \$40,000, incorporators, S. W. Hopper, D. Kennedy, R. E. Black, G. D. Kemp, C. E. Proctor and A. J. Anderson, all of West Toronto; Rixon, Ainslie, Stoddart Company, Limited, Owen Sound, Ont., lumber manufacturers, capital \$200,000, incorporators, H. Rixon, J. G. Ainslie and W. Stoddart, Owen Sound; McBurney Lumber Company, Limited, Toronto, Ont., capital \$50,000, incorporators, J. McBurney, C. H. Edwards, R. C. Davidson and others, all of Toronto.

Eastern Provinces

The Canada Paper Company may rebuild their plant at Windsor Mills, Quebec.

William H. White, Lachine, Que., has established a plant for the manufacture of bungs, taps and spiles.

Rhodes, Curry & Company, Amherst, N.S., are now turning out about ten box cars per day and are also at work upon passenger cars. Their men are working full hours for the first time this winter.

Recent Quebec incorporations include: Montreal Wire Bound Box Company, Limited, Montreal, Que., capitalized \$100,000, incorporators, A. J. Brown, K.C., R. O. McMurty and F. C. Bush, all of Montreal; Hull Wooden Ware Company, Limited, Hull, Que., capital \$40,000, incorporators, E. J. Taber, A.

McConnell, W. C. Wainwright, all of Hull, Que., D. Diver, of Deerfield, Mich., and others; G. A. Grier & Sons, Limited, Montreal, Que., incorporated to acquire the lumber manufacturing business of G. A. Grier & Sons, capital \$500,000, incorporators, G. A. Grier, G. W. Grier, D. G. Wardrope, A. H. Grier and others, all of Montreal.

The Roxton Wood Manufacturing Company, Roxton Falls, Que., capital \$20,000, have been incorporated to manufacture chairs and other articles of wood. F. Brais, of Roxton Falls, Que., and E. Paquet, Waterloo, Que., are among the incorporators.

A Fredericton, N.B., dispatch states that the lumbering and milling property on the Pokiok River, belonging to Gilman Bros. & Burden, has been disposed of to a New York syndicate. The property consists of a large sawmill fully equipped with modern machinery and 18,000 acres of splendid timber land. There is also the Pokiok Falls, one of the most valuable water-powers in the province.

Western Canada

The Sayward mills, at Victoria, B.C., are running again with a complete outfit of new machinery.

The Davidson-Ward Lumber Company are erecting a 20-machine shingle mill at Loughborough Inlet, B.C.

S. Hill & Son, lumber manufacturers, Saskatoon, Sask., have been succeeded by the Hill Manufacturing Company.

The Kelowna Sawmill Company, Kelowna, B.C., are putting in machinery for making fruit boxes; also a planer and conveyor.

The Home Stores, Limited, capitalized at \$200,000, have been incorporated to carry on a general lumber business in British Columbia.

Gray & Shields, Vancouver, B.C., have bought the Pitt River shingle mill from Thomas Kerr, who, a few months ago, bought the plant from Mr. Gray.

Flewir & Sons, Limited, Vancouver, have been incorporated with a capital stock of \$50,000 to erect and operate sawmills, build steamboats and barges, etc.

A wealthy syndicate, whose personnel has not yet been divulged, plans to build large sawmills at Esquimalt Harbor, B.C., at an expenditure of over \$300,000.

March 23rd is the date set for the conference at Calgary of all who are interested in the lumber business, especially those west of Winnipeg. Many topics of interest will be discussed.

The Edinborough Timber Company, Limited, Vancouver, capital \$200,000, have been granted a British Columbia charter to manufacture lumber, run sawmills, make sashes and doors, etc.

The Brooks-Scanlon-O'Brien Company have let the contract for five miles of railway, to be built from the Gordon Pasha Lakes, connecting with tide-water near Jervis Inlet. The company owns a large area of timber in the district tributary to the lakes.

The Schaake Machine Works, New Westminster, has completed its first consignment of twenty Johnston shingle machines which were ordered by the Davidson Ward Lumber Company for their mill at Loughborough Inlet. The machines will be installed under the superintendence of Mr. Whitney, of the Whitney Engineering Company, of Tacoma, Wash.

The annual meeting of directors of the Western Retail Lumbermen's Association was held at Winnipeg. The following are the officers for the current year: President, A. K. Godfrey, Winnipeg; Vice-President, A. W. Jones, Moose Jaw; Secretary-Treasurer, Alan Stewart; Assistant Secretary, S. H. Hamilton.

Much greater activity is reported in the British Columbia lumber trade, especially for export. The French sailing vessel "Champigny" is loading at the Hastings sawmill, Vancouver, for New Caledonia, and the steamer "Kish" at the same mill for China. The Norwegian barque "Euphrosyne," which was in this port last year, is expected in by April to take a shipment for South Africa.

J. M. Tuller, British Columbia manager for Pendleton, Gilkie & Company, an American timber company, recently bought 20,000 acres of timber lands from a Vancouver syndicate. These lands are located 200 miles north of Vancouver, and include a valuable tract of cedar. It is the intention of the purchasers to erect shingle and lumber mills. Pendleton & Gilkie acquired another large tract several months ago about 70 miles north of Vancouver.

Peter Morgensen, consulting and architectural engineer, recently arrived in Victoria to take charge of the erection of the proposed new buildings for the Western Canada Wood Pulp & Paper Company, Limited. The company has recently acquired 55,669 acres of pulp limits on Quatsino Sound, representing some of the choicest standing timber of British Columbia. It is proposed to erect one of the most modern plants such as will be able to turn out the finished product more cheaply and at greater speed than any at present in operation. The Orient consumes \$10,000,000 worth of paper every year, and this market is nearer British Columbia than any other source of supply. There is also a large market in Australia. The company are now shipping a sawmill, which will be in operation in a few months, and the pulp mill will follow in a very short time.

Comprehensive plans of development to be carried out during the next few years will be submitted at the annual meeting of the Northern British Columbia Exploration Company, to be held shortly in Victoria. The company's holdings are principally in timber. It owns sixty square miles of limits located on and in the vicinity of the Grand Trunk Pacific Railway in the vicinity of Fort George. Along the Fraser River and its northern tributaries this timber is estimated to exceed two and a quarter billion feet. Mr. Thomas Black, a wealthy Winnipeg manufacturer, and one of the shareholders in the company, states that it is proposed to erect a number of large sawmills at various points in these limits as soon as the Grand Trunk Pacific afford facilities for bringing in the machinery by rail. A market for the lumber is assured along the line as well as at Prince Rupert, and in the prairie country. The limits are said to constitute the greatest portion of the timber in the Fort George district. The company owns five hundred million feet of timber on Bidwell Sound on the west coast of Vancouver Island. This asset may be disposed of as the shareholders seemingly prefer to concentrate efforts on the milling proposition along the line of the new Transcontinental Railway. Included in the number are R. A. Mather, of Vancouver; Arthur Stewart, R. C. McDonald, George W. Walker, George Skinner, John Erzinger, James Turnbull, C. H. Enderton and W. A. Morkill, all of Winnipeg, and H. Percy Simpson, of Victoria.

Iron Frame "Simplex" Shingle Machine

In this, our latest design of Shingle Machine, we have incorporated all the advantages contained in our wood frame "Simplex" and added several improvements.

The arbor has been made heavier and a third bearing added to support it outside the driving pulley. The method of putting lead in the saw arbor has been greatly improved. This is now done by swinging on a centre directly under the saw the whole frame which carries the arbor. Thus the alignment of the bearings is not in any way affected and there will be no danger of hot bearings after the lead has been changed. The change may be made while the machine is running and without stopping the carriage.

An improvement has also been made in the method of driving the edger. It is belted direct from a shaft running at right angles to the main arbor from which it is driven by means of a bevel friction. This makes a very neat compact drive and has proved satisfactory in the mill.

The rail on which the carriage travels is made of square steel and when worn can be renewed by simply turning upside down.

Over three hundred of our Upright Machines (wood and iron frames) are in use in British Columbia and Washington.

DeLoach "Prince" Hand Feed Shingle Mill

JOHN H. CRANE
Manufacturer of Lumber and Shingles
DELOACH MILL MFG. CO.,
BRIDGEPORT, ALA. MONTEREY, ALA., JULY 2, 1907.

GENTLEMEN,—I purchased from you in 1905 a "Prince" hand feed shingle machine. I have operated it and find it all you claim for it. We cut at the rate of 30,000 shingles in 10 hours and made first class shingles. I consider your machine a very light running machine. If I wanted another hand machine I would certainly buy a DeLoach Prince.

With best wishes for your success, I am

Yours very truly,
JOHN H. CRANE.

Keep Steam Blowing off all the Time

BURN YOUR SAWDUST
SELL YOUR WOOD

The old reliable GORDON HOLLOW BLAST GRATE ("the grate with the reputation") adds from 25 to 50% to the efficiency of a boiler, and gives as good results with wet, green or frozen sawdust as a draft grate gives with dry wood.

20 YEARS ON THE MARKET. OVER 6,000 SETS IN USE.
OVER 600 VOLUNTARY TESTIMONIALS.

Saves labor in firing.—Lasts forever. Only expense first cost.—Equally efficient in ordinary furnaces or Dutch ovens.—Adapted for any number of boilers, from one up.—No change in construction necessary. A hole must be made through each wall, for the pipe: aside from this, not a brick need be disturbed.—The largest outfit can be installed between quitting time Saturday and starting up time Monday morning.—No difficulty about maintaining a fire at night, when the blower is idle, and no objection to so doing.

SOLD ON APPROVAL, subject to 30 days' exhaustive test, WE TO PAY THE FREIGHT BOTH WAYS in case of rejection.

State how many boilers you have and whether you have plain furnaces or Dutch ovens, and give width and length of grate surface or surfaces.

Gordon Hollow Blast Grate Company
Greenville - Michigan

There are more DISSTON BRAND Band and Circular Saws used than any other make, and by a large majority.

WHY?

Because millmen and sawyers recognize by the use of the DISSTON SAWS they obtain the greatest results for the least cost.

WE MAKE THIS STATEMENT WITHOUT FEAR OF SUCCESSFUL CONTRADICTION.

POINTS OF MERIT

MATERIAL

FINEST
CRUCIBLE STEEL

UNIFORMITY.
TOUGHNESS.
GREATEST TENSILE STRENGTH AND ELASTICITY.

**HARDENING
AND
TEMPERING**

DISSTON
METHOD

Being Manufacturers of our own steel, and thoroughly familiar with its makeup, we are able to absolutely adjust the hardening and tempering processes to the degree giving that perfect combination of hardness and toughness that produces the "edge, tension-holding and standing up qualities" for which the DISSTON SAWS are renowned.

GRINDING

DISSTON
METHOD

By the DISSTON METHOD all Band Saws are ground perfectly flat and uniform in thickness, thus making possible a very close adjustment of the guides without creating any friction or heat when in operation at the highest rate of feed; and all Circular Saws, whether tapered or of even thickness, are perfectly flat ground on the surface, thus insuring in all saws perfect clearance and true balance.

TENSIONING

DISSTON
METHOD

The uniformity of the material, temper and grinding is a large factor in the proper adjustment of tension; and this, together with the Disston process of tensioning, is the reason why the DISSTON SAWS will manufacture more lumber, under the same conditions, than any other brand of saw.

In the DISSTON BRAND of SAWS you have the advantages of the product of a progressive, up-to-date saw factory, the LARGEST IN THE WORLD, and where saws are made throughout, from the making of the steel itself—the superiority of which has been demonstrated for the past fifty-three years—to the finishing operation, and each process is performed by mechanics of long experience and highest order of skill.

WE HAVE BEEN MAKING SAWS FOR OVER 68 YEARS

"THE DUNBAR"

New and Improved

STEAM LOGGING ENGINES

Best on the Market

This is the machine for which we claim all the good Qualities possessed by any other and a great many valuable improvements besides.

This time we wish to call your attention to one of many important points which prove conclusively the superiority of the **Dunbar Logging Engines**: that of the Hydraulic Apparatus for raising and lowering the Boiler, an invention of our Mr. Dunbar, Sr. (for which patents are pending). By this device all danger from rush of water to either end of the Boiler, caused by irregularities of the road, is avoided. One of the most serious drawbacks in other Engines is the fact that the Boiler is stationary on the frame, consequently a source of great anxiety because of the danger to both the Crown Sheet and the Tubes. You can readily understand that in going up or down hill either the Crown Sheet or the Tubes are bared, causing them to become so heated that they will leak badly, and after repetition for a time the Boiler will be practically ruined.

This improvement, which supersedes our previous method for raising or lowering the boiler, has been added since cut herewith shown was made.

Should you contemplate putting in a Logging Engine we shall be glad to take the matter up with you and give you all particulars.

Quotations for Logging Sleds furnished.

IT WILL PAY YOU TO INQUIRE INTO THE MERITS OF OUR

New Tie or Log Siding Machine

It slabs both sides of the logs accurately and rapidly at the one operation. Both saws movable to or from the centre simultaneously by means of a lever within the sawyer's easy reach, and the spacing indicated on a quadrant in plain sight. This machine will cut over 3,000 ties in ten hours. In any mill using a Gang, this machine, if used for preparing the cants, will increase the output 20%. It is a compact machine, strongly built, as the cut indicates, to withstand hard and continuous usage. It is without an equal, let alone a superior, in this line, because it meets the requirements perfectly. Let us have an opportunity of sending descriptive matter, and price.

BETTER RESULTS

The Shimer System of Tools paves the way to better results and larger profits. Wherever you find this system in use you will find as a result a higher grade of work and a higher degree of satisfaction to the operator.

THE SHIMER CUTTER HEADS for Flooring, Ceiling, Siding, Wainscoting Ship Lap, O. G. Batten, etc., are all made upon the interchangeable plan. Each is made in a separate Head, used interchangeably to meet the conditions of frequent changes, which is accomplished in less time and with less labor and expense. To remove one class of Head from the machine spindles and replace with another is but momentary, the vertical adjustments of the Head remaining unchanged. The system is very economical on account of its time and labor-saving features.

If you have work, regular or special, to get out in quantity it will pay to have a Shimer Cutter Head made to do the work. Our fire-proof vaults contain many thousands of samples and drawings of this kind which we have turned out in the past for our customers.

The expense that enters into the every day make-ready of the old straight cutters is a thing of the past the minute you begin the use of the Shimer Cutter Heads.

A very clear description is given in our latest Catalogue, a copy of which we will be pleased to mail you. Address

WILLIAM HAMILTON Co. LIMITED

PETERBORO ONTARIO

“Kendall” Patent Circular Gang

For Small Logs

Read what one Customer says about it :

“The machine has given every satisfaction expected, and in many cases far exceeded my idea of sawing lumber; the proof of this being that our customers are paying me \$1.00 to \$1.50 per thousand more for certain classes of lumber than they can purchase same quality elsewhere; this advance being purely on account of the uniform and smooth sawing this saw is capable of doing.”

Other customers are getting equally good results.

We make it in four sizes to cut stocks up to 12 inches thick

If you are cutting a lot of small logs, this machine will appeal to you—it is built specially to handle them economically, and will save you money in the decreased cost of handling and the increased output per day, to say nothing of the better quality of lumber cut.

Shall we send you further information?

A Suggestion — To the Trade!

We believe that the Lumber Trade in the Prairie Provinces and Ontario will make a mistake by not stocking up as heavily as possible with British Columbia Lumber and Shingles at present prices—which are **very low**: in fact lower prices with \$9.00 to \$10.00 logs, and \$5.00 shingle bolts, are an impossibility.

A **word** to the **wise** should be sufficient. Send us your order.

12" Hand Planer with Boring Attachment

No. 8 Variety Saw-Rip and Cut-Off

28" Band Saw

24" Single Surface Planer.

Mowry's Jumbo Edger and Gang Separate or Combined

THIS IS ONE OF THE BEST MACHINES manufactured in Canada. We have sold quite a number of these machines and have some splendid recommends for them. Mandrel is $4\frac{1}{2}$ in. diameter by 10 ft. 6 in. long. Drive pulley is 20 in. x 20 in. The machine is five feet seven inches inside of frame. It has two water boxes. Two stationary and two movable saws (or more if desired). It has eight stationary saws for the gang side (or more if desired). It will rip up cants to eight inches thick. Take a slab off two sides of your small logs and run the log through the "Jumbo" and it will come out in boards. It is impossible for the cant to fly back. It has reverse gear so that if a cant binds the operator can touch a lever and run the log back. 24 in. or 26 in. saws are used. Prices quoted on application, with or without saws.

We make all Kinds of up-to-date Saw
Mill Machinery

SIMONDS

Crescent-Ground Cross-Cut Saws

This is the identical Crescent-Ground Cross-Cut Saw which has for years been recognized as the best made or used in the United States. Since beginning the manufacture of these saws at our Canadian factories, we have found and are supplying a greatly increased demand throughout the Dominion. The Saws are made of Simonds Steel, and Simonds Steel is the best saw steel made. They run easy, cut fast and give good results. Sold by the hardware trade or direct from our offices.

We are Specialists on Lumber and Saw Mill INSURANCE

FOR OVER THIRTY YEARS we have made a close and constant study of this specialty, embracing not only "The Best Protection at the Minimum Cost" in the sense of Policies in the Strongest Companies at the lowest possible rates, but the enhanced Protection of such Policies so worded as to Insure you under whatever form of sale or undertaking you may make with your customers, unaware as you may be of the application of the Canadian Insurance Law in such instances.

We invite inquiry as to the above and our "ADVICE SHEET" system which we originated several years ago for the special convenience of our Lumber Customers.

We personally inspect each of the plants we insure at least twice a year.

foreign countries embraced in the General Postal Union, \$3.00.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Special care is taken to secure for publication the latest and most trustworthy market quotations throughout the world, so as to afford to the trade at home and abroad information on which it can rely in its operations.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

No. 7

The Tariff Struggle in the States

The tariff revision proposals in the United States have reached another mile-post in their progress and Canadians are able to form a more definite idea of what the final result is apt to be. The chairman of the Ways and Means Committee has prepared a bill which shows that the campaign in favor of lower duties on lumber has convinced the committee of the necessity for a reduction of this nature. Reports from Washington state that this bill proposes a reduction of the duty on lumber from \$2 per thousand feet to \$1 per thousand feet, a reduction of the duty on laths from 25 cents per thousand to 12½ cents per thousand, and a reduction in the duty on shingles from 20 per cent. to 10 per cent.

In Canada and in the United States, there have been expressions of opinion as to the effect of such a change, which vary as widely as the two poles. If all that the lumber manufacturers of Michigan and the Northwestern States have said is true, the bill will mean ruin to them, and if all that some of the manufacturers of the Southern States have admitted is also true, the bill will mean nothing of the sort, but will simply involve a little livelier competition and possibly more favorable terms for the consumers. If there is any result which can be foreseen with certainty it is that there will be lower prices for the consumers in the United States, wherever Canadian lumber will enter into competition with the home product. But that this will mean lower profits for manufacturers is by no means likely. The difference to the consumer will be some portion of the reduction in the duty. It is not likely that the consumer will receive the whole of the \$1 reduction. When business has accommodated itself to the change, it is not probable that there will be any difference worth bothering about so far as the manufacturers of the United States are concerned.

What the effect will be in Canada is as yet somewhat of a problem.

Many Canadian manufacturers and dealers are inclined to the belief that there will not be much of a change on this side of the line. In fact, the prevailing opinion in Canada is that Canadians do not need to concern themselves at all, and above all that they need not look for any extensive benefit from the change. So far as Canadian lumber is concerned it is a product which, especially in the upper grades, Americans must have. In the nature of things, there being a continually increasing shortage of supply on the other side of the line, Canadian lumber must grow in demand in the United States. Canadians might perhaps have to wait a little longer under a high tariff than under a low one, but in the long run the result will be the same.

There will be some small effects in the way of readjustments of trade. A few of the lower grades of lumber will begin to find sale in the United States, and manufacturers of low grades in the United States will have this new competition to face. If they did not have this prospect in view they would probably be able to make their own prices before long and secure enormous profits. In this way an important result of the reduction in the duty will be to put off an increase in the prices, at least until Canadian timber resources commence to feel the result of the increased amount of cutting which will follow. It is improbable, however, that the competition of Canadian lower grades will affect prices in the United States. The necessity for lumber is imperative and there is every reason to believe that under normal conditions there will be trade for everybody at prices which will mean a good profit. If the demand for lumber were on the decline and there was a prospect of over-production for a long period to come, it would not be unreasonable to look for something in the way of a depression of prices in the United States. But conditions are all the other way. The United States manufacturer, therefore, will probably find in a short time that he has nothing to worry about in the reduction of the duty, and, inasmuch as the increased consumption of lumber is concerned which may come from Canadian competition, its result in a short time will probably be to make lumber more popular than before and increase the demand. Taking everything into consideration, the United States producer has little to lose and possibly something to gain by the change, whereas the United States consumer has everything to gain.

If it be true that the United States manufacturer has little to lose, the converse also is probably true, that the Canadian manufacturer has little to gain. This, at least, is the view which seems to prevail at present. The only question which is raising any serious question in Canada is as to the effect upon the Canadian timber resources. Opinions upon this point are much divided. Some believe firmly that the result will be a serious depletion of the Canadian timber resources and others are equally convinced that the result will be nothing of the sort. Those who have made a study of the resources are inclined to the former belief and to fear that Canadian forests will suffer. In the older parts of Canada, Ontario for instance, the timber at present under license is in the hands of strong operators, who have been cutting for many years and understand pretty well how to make the best of their limits. It is not considered probable that Americans will be able to deplete these districts to any dangerous extent, but in British Columbia there is a different condition of affairs. Speculators find it a fairly easy matter to obtain large tracts of timber there. With the prospect of easier access to the United States markets, a movement has already commenced towards securing control of much of the most valuable timber in the province. In conjunction with the proposal on the part of the McBride Government to make the timber licenses renewable it is held by some that a serious menace is threatened to the timber resources of British Columbia. The claim is that either the industry will be controlled by great corporations having their headquarters mostly in the United States, or that the timber resources will be ruthlessly depleted. These views are held by men who have given the question a great deal of study.

The whole situation, therefore, so far as it concerns the effect upon the timber resources of the country, is doubtful. It will behoove Canadians to watch events closely and to forestall any movement which will tend towards destruction of their resources or the concentration of them in the hands of large companies of Americans. It is conceivable that the results will be beneficial all round and that the result of the action of the British Columbia Government in making the licenses renewable will also be to place the lumber industry in that province on a far surer basis, but there is need for much caution on the part of all concerned.

The Fraser River Lumber Company's Plant

Description of One of the Finest Mills in the World—
Splendid Machinery and Equipment—A Fine Office Building

The site of the Fraser River Lumber Company's new mill, near New Westminster, B.C., was occupied for sixteen years by the Ross-McLaren Lumber Company's sawmill plant. In 1905 it was acquired from the Ross-McLaren interests by the Fraser River Saw Mills, Limited, owned by Lester W. David, of Seattle, and business associates, who in turn disposed of it to the present owners, in August, 1907. The original sawmill building was completely torn down and construction started on the

smith's shop, 144 feet long by 40 feet wide, fully equipped with modern tools. The sawmill has a cutting capacity of 700,000 feet per day double shift, and is equipped with bull chain 600 feet long made of 1 3/4-inch

Fraser River Lumber Co., Limited—Office Building and Part of Staff.

present plant on Jan. 1, 1908, the work being under the general supervision of Mr. W. S. Rogers.

The mill site and adjoining property consist of 380 acres of level prairie country, extending from the river fully a mile back to the foothills. The mill proper is 500 feet long by 76 feet wide, with an "L" shaped wing 250 feet by 50 feet.

The boiler house is 74 feet x 18 feet, constructed of concrete, brick and steel, containing sixteen 72-inch x 18-foot return tubular boilers set in four batteries; four boilers to a battery. The two fans used for the induced draft are 144 inches in diameter. The shaving vault is 40 feet x 79 feet. The boilers carry 125 pounds working pressure. There is also in the main boiler house a 72-inches 14-foot auxiliary boiler.

The engine room is 81 x 44 feet, being constructed of brick, concrete

and steel and equipped with one pair of Reliance Twin Corliss engines 22x42-inch, and one pair 18x42-inch, and one Hamilton slide valve 24x30-inch with combined nominal horse power of 2,400 horse power. The fly wheel on the large engines is 62-inch x 14 feet, and one the small twin engines 43-inch x 18 feet. The foundation of the power house contains 800 piles and 700 yards of concrete. The refuse burner is of steel and brick, 33 feet in diameter by 122 feet high.

In connection with the sawmill plant there is a machine and black-

Fraser River Lumber Co., Limited—View of Jack Ladder and Mill Pond.

centre rig is a new 9-foot Allis-Chalmers, double cutting band, with four block 48-inch opening, Reliance carriage. This carriage is built of white oak and cast steel throughout. The third rig is also a new 9-foot Allis-

Fraser River Lumber Co., Limited View of Filing Room.

Chalmers double cutting band with 60-inch four block three track carriage. The two double cutting band mills have "Hill" niggers. The edger capacity consists of one 60x10 six saw edger, and one 84x10 ten saw broken roll double edger, both Allis-Chalmers make.

The slasher is 50-foot long and built to cut either 4 or 4½-foot slabs. This slasher was built by the Sumner Iron Works, of Everett.

The sorting chain tables are 750 feet long and on them is located a 72-inch Mershon band re-saw and two Stetson-Ross "ready sizers." The chain is in eight sections, any section of which can be stopped instantaneously, when necessary for removing lumber. The transmission machinery was all furnished by the Sumner Iron Works. The mill was designed by Mr. Arthur B. Praena, of Everett, Wash., and Mr. L. S. Tucker, of Everett, was superintendent of mill construction.

All lumber for cargo shipment is handled on cars, each car carrying from two to three thousand feet of lumber. The wharf is 1,200 feet long and 112 feet deep, with a minimum depth of 31 feet of water, low tide, the entire length. The dry kiln capacity consists of six standard dry kilns 20 x 120 feet, capable of drying 150,000 feet of lumber per day. The shed for storing dry lumber is under construction at the time of writing, and is 1,000 feet long by 100 feet wide. This should have a capacity of between fifteen and twenty million feet. At present in the yard there are tramways and pile bottoms with a capacity of twenty million feet and available piling ground to increase this capacity to fifty million. The planing mill at present has seven matchers, a band re-saw and sizer. It is operated by a 22x42-inch Corliss engine, steam for which is taken from the sawmill boilers.

For fire protection, a private water system has been installed, connecting with Como Lake, which derives its supply of water from mountain springs. The capacity of the lake is 30,000,000 gallons. There is a 14-inch intake pipe 12 feet below the surface of the lake, giving a drop of 467 feet to the level of the mill site. The water pressure is reduced to 130 pounds at the mill. A 10-inch supply pipe connects the lake and

Fraser River Lumber Co., Limited Interior of Sawmill, looking from Trimmer Tables to Bandsaws and Jack Ladder end.

Washington. The automatic trimmers, of which there are two, were also made by the Sumner Iron Works. The No. 1 trimmer is 40 feet, set with 20 saws. No. 2 is 44 feet, with 22 saws. There is a 60-inch diameter steam jump saw on each line of rolls from band saws. There is also a 60-inch Wickes gang driven by separate engine, 24 x 30-inch. All the three rigs cant for this gang.

Fraser River Lumber Co., Limited Interior of Engine Room Showing two of three Engines Installed.

mill site, while throughout the yards, mill and sheds are 6-inch and 8-inch laterals.

The log storage boom is four miles above the mill on the Pitt River, and has pockets with a capacity to hold 30,000,000 feet of logs at one time. The company does all its own towing, having just finished the construction of a stern wheel steamer, "Senator Jansen," named after the vice-president of the company, the Hon. Senator Jansen, of Jansen, Neb. This steamer is 110 feet long, 24 feet beam and 24 feet draught. It is equipped with two 12 x 60-inch engines. The boiler is of locomotive type, 25 feet long, with 60-inch shell and carries 200 pounds working pressure. The steamer is also equipped with a 10,000-gallon Worthington pump, to be used in case of fire along the water front.

Fraser, Mills, which is the name of the post office and C.P.R. station, is about fifteen miles from the mouth of the Fraser River and about three miles east of the city of New Westminster. The Great Northern and Canadian Pacific railroads have spur lines into the mill, affording an outlet for rail shipments over both systems. The mill site is an ideal one, there being ample water in the Fraser River to take care of the largest lumber carrying vessels afloat, as well as having the advantage of being able to ship by rail over competitive railroads.

Exactly one year after the construction of the plant was started the first foreign cargo of lumber left the wharf, aboard the Chilean barque "Ivanhoe," bound for Valparaiso, S.A.

The Fraser River Lumber Company are the proud possessors of the finest office building in the Dominion of Canada, which was recently erected at a cost of \$15,000. The rooms of the building are finished in

(Concluded on page 21.)

Officials of the Fraser River Lumber Company

R. L. Craig, Secretary-Treasurer.

Mr. A. D. McRae, president and general manager of the Fraser River Lumber Company, was born in Ontario 34 years ago. Mr. McRae is a self-made man, and a practical lumberman, being interested in several large mills in the mountains of British Columbia, as well as other places throughout Canada. He is also heavily interested in the Saskatchewan Valley Land Company, one of the largest land companies in the world, and vice-president of the Winni-

peg Insurance and Vessel Agency and the Saskatchewan Elevator Company. He is also vice-president of the firm of Davidson & McRae, land agents of the Canadian Northern Railway Company. Mr. McRae is also president of the British Columbia Lumber, Logging and Forestry Association.

Hon. Peter Jansen, vice-president of the company, is a Senator of the State of Nebraska, and one of the largest ranch owners in the middle west. Senator Jansen was one of the twelve United States commissioners at the Paris Exposition, and also served as an ambassador to Russia during the administration of the late President McKinley. He has written several instructive articles for popular magazines with reference to his travels, etc., and articles on farming life. He is also interested in several elevator companies in Western

H. J. Mackin, Sales Manager.

of shipping clerk, salesman, and later became sales manager. Mr. Mackin, although a very young man, has an extensive and practical knowledge of the lumber business in all its phases.

Mr. W. S. Rogers, manager of manufacturing, is a practical lumberman, who received his first lessons in the sawmill business in the employ of the Weyerhaeuser Timber Company, in Minnesota, and has been on the coast in charge of the Weyer-

A. D. McRae, President, Fraser River Lumber Co.

Canada and is well known for his philanthropic interests.

Mr. R. L. Craig, secretary-treasurer of the company, is a native of Missouri, where he was born 32 years ago. His first experience in the saw milling business was in the State of Arkansas, where he was connected with one of the largest mills. Mr. Craig came to the coast in July, 1908, to accept the post of secretary, later being made secretary-treasurer of the company.

Mr. H. J. Mackin, sales manager, is a native of New York State. He went to the West as a youth, the past ten years of his life having been spent in the saw-milling and box factory experience. He was connected first with the Standard Box & Lumber Company, Portland, Ore., in various capacities around the plant, and went thence to the Tongue Point Lumber Company, of Astoria, Ore., in the capacity

Thos. McLarty, Logging Manager.

W. S. Rogers, Manager of Manufacturing.

hauser Lumber Company's plant at Everett, Wash., for the past six years, before engaging with the Fraser River Lumber Company. Mr. Rogers has general supervision of the manufacturing and operating departments.

Mr. Thomas McLarty, manager of the logging department, was born in Ontario, Can., 47 years ago, and has resided in the State of Washington for the past 22 years, joining the Fraser River Lumber Company from the Mason County Logging Company, who have large logging operations both at Olympia and Shelton, Washington.

The Fraser River Lumber Company, Limited, maintains selling offices in Regina, Sask., with Mr. C. Bruce in charge; in Winnipeg, Man., with Mr. Fred A. Shore in charge, and in Toronto, Ont., where Mr. Hugh A. Rose is located.

The Fraser River Lumber Company's Plant.

(Continued from page 19.)

the different woods, such as fir, spruce, hemlock and cedar, and stained in different colors, showing the beautiful and artistic finish that can be derived from these various kinds of wood. The second floor contains the living quarters of the sales manager, assistant to the logging manager, assistant sales manager and the treasurer. These quarters are also furnished comfortably for the convenience of the occupants. The office is also equipped with private switchboard, telephone exchange, and telegraph wires.

Lumber Company's "Deer" Mascot.

A mascot is usually part of the crew of a ship or company of theatricals, and sometimes large industrial plants have some pet animal, either a dog or cat or a bird, which is supposed to bring good fortune to the establishment, but few are fortunate enough to have so unique a mascot as that which is owned by the Fraser River Lumber Company, at Fraser Mill, B.C.

While booming logs early in February, one of the men employed at the mill noticed a young deer swimming rapidly down the Fraser River past the mill, and one of the men, who had been a cowboy in other days, undertook to lasso the animal, which feat was successfully accomplished. Supt. W. S. Rogers took possession of the deer and enclosed a tract several acres in extent, adjoining his house property, in which the deer was turned loose. Since its capture the deer has grown very tame and affectionate and will readily feed out of the hand of those whom it knows. Not only is it a source of great attraction to the youth of the community, but few visitors to Fraser Mills leave without paying their respects to its "deer" mascot.

A proposal from the shingle manufacturers of the State of Washington to the shingle operators of British Columbia to enter an agreement to control the combined trade, has been made. It was briefly discussed at a meeting recently, when representatives were present from both British Columbia and Washington. Unless the output of Canadian mills as well as American plants is limited, it is claimed there can be no control of prices. Vancouver mills are getting from \$1.80 to \$1.90 for shingles, but such is the control of the American market on the Canadian output that were the Washington mills forced to sell for \$1.50 the price in Vancouver would in a very short time fall to the same figure. As the American market governs the Canadian shingle trade it is urged by the Washington shinglemen that the mills on both sides of the line should combine to save themselves from financial ruin at the hands of the brokers, they accuse of playing one side against the other in order that they may buy in advance of the heavy spring demand and pocket the profits of the rise themselves.

Dauphin's Cut a Record One.

A report from Dauphin, Man., states that the lumber cut this winter in that part of the country will be the largest in its history. The winter has been favorable for work in the woods and the various mill owners having camps have taken advantage of it to operate their limits to the fullest extent. It is estimated that at least 25,000,000 feet more than last year will be cut.

The cordwood cut has also been one of the largest on record. The records show that fully 3,000 men have found employment in the woods this winter, which gives some idea of the industry. The cut by mills is reported as follows: Tisdale Lumber Co., Murphy's Siding, 3,000,000 feet; Saskatchewan Lumber Co., Crooked River, 4,000,000 feet; Cowan Construction Co., Mistatam, 10,000,000 feet; Shaw Bros., Prairie River, 6,000,000; the Great West Lumber Co., Greenbush, 5,000,000; Red Deer Lumber Co., Barrows, 18,000,000; Ruby Lake Lumber Co., Ruby Lake, 5,000,000; Dart Lumber Co., Erwood, 3,000,000; T. A. Burrows, Grandview, 10,000,000; the Standard Lumber Co., Winnipegosis, 3,000,000; Muchenbacher Bros., Mafeking, 1,500,000; Caverley & Sons, Bowsman, 2,000,000; John Sinnot, Shortdale, 1,000,000; Durban Lumber Co., Durban, 1,000,000; John Hanbury Lumber Co., Kamsack, 1,000,000; portable mills, 5,000,000; total, 78,500,000.

Legal Decisions Affecting Lumbermen

Change of Venue in Lumber Case.—In the case of Gorman v. Hope Lumber Company, the Master in Chambers at Toronto granted a change of venue from Perth to Sault Ste. Marie, on motion of the defendants, who showed that it would be impossible for them to get their witnesses out of the lumber camps and be at Perth in time for trial, owing to the breaking up of winter just about that time. The defendants swore to having 16 witnesses and the plaintiffs to only 4. The trial will be at Sault Ste. Marie on May 15. The defendants are to furnish the plaintiff with \$100, or whatever lesser sum is reasonable to take his witnesses to trial.

Disagreement Regarding Timber Licenses.—An interesting judgment has been given by Mr. Justice Martin, at Vancouver, in the case of Topping v. Marling. This action arose over a dispute as to payment for timber licenses in which Col. Topping was concerned. The case was tried some weeks ago, and in his judgment Mr. Justice Martin decides in favor of Col. Topping, the plaintiff. The judgment is as follows:

This is an action upon a promissory note, given under contract for the purchase of certain timber licenses. The note is admitted, but in answer to the demand for the payment of the balance due thereon, the defendant sets up a new agreement between the parties which is stated to be "partly in writing and partly verbal," and the effect of the same is alleged to be shortly that the defendant was to receive 14 licenses for the price of 12 only, subject to certain additional payment in the event of a specified sale "and if such sale did not take place as aforesaid the defendant was to pay to the Government of the Province of British Columbia the license fees for the said licenses."

In support of this contention a conflict of evidence arose between the defendant and the plaintiff, who gave their respective accounts of what was said at the time of the execution of the later writings, and the defendant put forward one Charles Goss in corroboration of his story, and in his evidence in chief Goss testified in a manner which told against the plaintiff, but in cross-examination he broke down and gave such an unsatisfactory and uncertain account of the transaction that I cannot accept him as a safe guide to my conclusions. He does not seem to have any reliable recollection of what was said, apart from his lack of frankness about the payment of the commission. It is clear that there never was any agreement by the plaintiff to pay the license fees either under the original contract of the 31st July, 1907, or subsequently.

In my opinion the defendant has no meritorious defence legally equitable, though he appears to have entertained the genuine belief that the plaintiff was liable to repay him the amount he paid for the licenses under part of said contract. Though in one sense it is not strictly necessary to decide that point, yet in view of the subsequent disagreement between the parties, I think it is not out of place to say that there was under said contract clearly no obligation upon the plaintiff to recoup the defendant for the amount he "advanced" to pay for the license. It seems unfortunate that the defendant did not apparently take legal advice upon this point before requiring the plaintiff to do something he was not lawfully called upon to do, thereby bringing about this litigation. The only obligation upon the plaintiff under the contract was to sell so much timber land for a specified price and to execute the necessary transfer thereof. I am happy to be able to say that in putting forward this untenable contention I feel satisfied the defendant did not seek to take undue advantage of the plaintiff's anxiety for a settlement, though it had that result. On the whole evidence I am of the opinion that the defence to the payment of the note has not been established, and therefore judgment must be entered in favor of the plaintiff.

Let Well Enough Alone.

Wm. Tytler, a prominent shingle man of Vancouver, states that British Columbia shinglemen, as a whole, prefer that the 30 per cent. duty on shingles shall remain. He said the British Columbia mills were all doing fairly well. They had established a reputation for good shingles, while if the duty comes off and the market for the British Columbia mills is made so much larger, hundreds of inexperienced men will enter the business, as they did when the industry was first opened in Washington. This would have a tendency to lower the standard of the product and would force prices down. Last year British Columbia mills shipped one billion shingles into the United States in spite of the duty, and this was one-sixth of all the shingles used on the other side of the line.

The concatenation of Hoo-Hoo which it was expected would be held shortly at Haileybury, Ont., has been postponed and will not take place at Haileybury. The probability is that Toronto will be the scene of the gathering and there are good prospects for quite a number of new kittens being rounded up. The date has not yet been selected but will probably be early in May.

Mr. A. K. Godfrey, Winnipeg,
President of the Western Retail Lumbermen's Association.

Mr. Geo. H. Wall, Winnipeg,
Vice-President of the Western Retail Lumbermen's Association.

Western Retail Lumbermen's Convention

The Western Canada Retail Lumbermen's Association held its annual convention in the Commercial Travelers' Building, Winnipeg, recently. There was an excellent attendance of members from all parts of Manitoba and Saskatchewan, and a number of visitors attended from British Columbia, New Ontario and the United States. The sessions were of much value to those who attended. The addresses delivered were remarkable for the quantity of valuable information they contained. There were a number of other attractions at Winnipeg at the same time, which added to the interest of those who attended the convention.

The election of officers resulted in the choice of a strong board. The new president, Mr. A. K. Godfrey, Winnipeg, is a man of unusual ability, who may be depended upon to fill the office creditably and to make the association of increasing importance and value. Mr. Alan M. Stewart, secretary, who was reappointed, has filled the office so acceptably in the past that no better choice would be possible. He has performed splendid service, and is not only able and painstaking but courteous and affable.

The following amongst others were in attendance:

A. H. Foulds, Carnduff, Sask.
G. F. Robertson, Crystal City, Man.
T. Millard & Son, Holland and Cypress River.
W. R. Foulds, Carnduff, Sask.
Geo. G. Earle, Elkhorn, Man.
M. Craig, Foam Lake, Sask.
L. Leadbetter, Semans, Sask.
W. A. Smith, Ninga, Man.
J. A. Taylor, Boissevain, Man.
J. A. Decosse, Somerset, Man.
W. D. B. Boyd, Roseisle, Man.
W. E. Moore, Regina, Sask.
J. Playfair, Baldur, Man.
J. H. Meilicke, Dundurn, Sask.
J. Meilicke, Jr., Dundurn, Sask.
C. A. Meilicke, Hanley, Sask.
L. H. Mosthop, Humboldt, Sask.
C. J. Buchard, Saskatoon, Sask.
K. B. Birkeland, Minneapolis, Minn.
G. E. Davidson, Manitou, Man.
Wankel & Barr, Oak River, Man.
A. M. High, Killarney, Man.
W. J. Robertson, Cartwright, Man.

Alfred B. Estlin, Melita, Man.
James Thomas, Killarney, Man.
John J. Moon, Russell, Man.
A. Donnelly, Maidstone, Sask.
F. McPherson, Binsearth, Man.
Thos. Adair, Treherne, Man.
W. F. Watson, Virden, Man.
A. N. Shaw, Stoughton, Sask.
A. R. Stevens, Elm Creek, Man.
Geo. Barr, Gladstone, Man.
Jas. K. Robson, Treherne, Man.
C. H. Wentz, Saskatoon, Sask.
T. E. Maxwell, Grand Coulee, Sask.
E. M. Williams, Russell, Man.
E. Baril, St. Jean Baptiste, Man.
Marks & Co., Plum Coulee, Man.
J. J. Heaslip, Alameda, Sask.
H. W. Robinson, Fort William, Ont.
Grest Bros., Waterous, Sask.
S. A. Hamilton, Moose Jaw, Sask.
T. B. Patton, Regina, Sask.
G. B. C. Sharpe, Moose Jaw, Sask.
E. E. Finch, Strathclair, Man.
James Sanderson, Eli, Man.
S. McClellan, Carman, Man.
A. W. Jones, Moose Jaw, Sask.
Le Roy Stolehkiss, Regina, Sask.

W. O. Turnbull, Fillmore, Sask.
R. F. Hay, Arcola, Sask.
J. A. Morton, Lauder, Man.
J. H. Jones, Rosebank, Man.
Jos. Park, Rosebank, Man.
W. W. Davidson, Moose Jaw, Sask.
Jos. Mergens, Weyburn, Sask.
A. Schambbin, Weyburn, Sask.
H. Van Tassel, Moose Jaw, Sask.
S. J. Pickel, Saskatoon, Sask.
W. M. Stewart, McAuley, Man.
J. E. Walker, Rocanville, Sask.
P. L. Summerfeld, Nutana, Sask.
F. Thorn, Maidstone, Sask.
Rat Portage Lumber Company, Winnipeg, Man.
E. F. Gardiner, Quill Lake, Sask.
J. A. Ball, Quill Lake, Sask.
Theo. Sparks, Grandview, Man.
J. J. Crowe, Lemberg, Sask.
H. C. McWilliams, Winnipeg, Man.
R. F. Bingham, Winnipeg.
R. H. Catherwood, Regina, Sask.
W. F. Hanbury, Brandon, Man.
H. Springate, Rat Portage Lumber Company, Winnipeg.
Millard & Son, Holland, Man.
F. J. Carpenter, Yorkton, Sask.
W. Armstrong, Portage la Prairie, Man.

J. H. Hughes, Brandon, Man.
J. R. Hooper, Editor WESTERN LUMBERMAN, Winnipeg.
A. W. Sherwood, Indian Head, Sask.
F. H. Millard, Winnipeg, Man.
Jas. Badgley, Emerson, Man.
Fred. A. Shore, 332 Grain Ex., Winnipeg.
Chas. J. Lee, 326 Union Bank, Winnipeg.
Jos. A. Carmies, La Salle, Man.
Wm. P. Dutton, Dutton-Wall Lumber Company, Winnipeg.
A. E. Lee, Dutton-Wall Lumber Company, Winnipeg.
M. M. Stearns, Wynyard, Sask.
S. Fargey, Belmont, Man.
Peter Kleckner, Vinbank, Sask.
A. D. L. Renuart, St. Pierre, Man.
C. H. Wentz, Saskatoon, Sask.
D. E. Sprague, Winnipeg, Man.
A. K. Godfrey, Winnipeg, Man.
W. J. Bettingen, Winnipeg, Man.
W. D. Galvin, Humboldt and Winnipeg.
R. A. Walston, Humboldt and Winnipeg.
J. McInnis, Winnipeg Lumber & Fuel Company, Winnipeg, Man.
G. H. Wall, Winnipeg, Man.
C. B. Little, Winnipeg, Man.
John P. Jansen, Sask. Elev. Co., Winnipeg, Man.
A. Renuart, St. Pierre, Man.

At the opening of the convention Mr. T. B. Patton, Regina, vice-president of the association, presided, in the absence of President Houser. The president's address was read by the secretary. It drew attention to the fact that the association had been formed eighteen years ago. Reference was made to the recent Trades Congress held at Minneapolis, and the hope was expressed that it would be discussed thoroughly at the convention. Mr. Houser expressed his regret at being unable to attend the convention. The most important portion of the address dealt with the harm done by retailers shipping outside their own territory.

The Secretary's Report.

The secretary in his annual report stated that the members were to be congratulated on the result of the last year's business. In spite of the many adverse circumstances which had prevailed throughout the year, the retail lumbermen had come through it unscathed and were

now prepared to reap the benefit of better times. There had been less pirating done by the manufacturer and wholesaler than ever before. This he knew had been the case in Manitoba and he believed that the same could be said of Saskatchewan. The association was to be congratulated also upon the good feeling which had prevailed throughout the year.

Mr. Stewart spoke of the practice of dealers who had sold out their retail business, commencing a few years later to ship car lots direct to customers. This practice had been decreasing of late, but had only been carried on by small mills and commission men, not by the majority of wholesalers. Retailers ought to appreciate fully the benefit resulting from wholesalers doing business with regular dealers only. Wholesalers had their share of the troubles of the trade and unless the loyalty of the one branch to the other was reciprocated trouble would be sure to result. Another evil which was almost on a par with manufacturers shipping direct to the consumer, was that of retailers shipping into the territory of one another, for the sake of getting a little extra business.

Referring to his visit to Minnesota to attend a meeting of retail dealers, for the purpose of discussing the adoption of a general code of ethics, Mr. Stewart said that the meeting had been very representative, and that the system of trade ethics, as adopted by it, was one which he believed was absolutely necessary in the United States.

The association had performed work of much importance but there was still a great deal to be done in the way of making it work more smoothly and effectively. It was the duty of every member to supply all the information he could, and to act upon any which he obtained. Members should supply the secretary with all the information they obtained, whether it seemed to them important or otherwise. Everything which happened to the individual members was of interest to the association. Mr. Stewart spoke favorably of the assistance rendered to the retail trade by the "Western Lumberman," complimenting its editor, Mr. Hooper, upon his useful work.

A Good Annual Statement.

Referring to the annual statement, Mr. Stewart drew attention to the encouraging increase in insurance, which amounted to over \$1,000,000, and urged that every member of the association should carry insurance with its department.

The annual statement presented by the secretary showed receipts amounting to \$11,373.91, and expenditures amounting to the same sum, which included a balance on hand in the bank of \$2,013.68. The assets of the company were shown to amount to \$13,396.79, and the liabilities to only \$5.16, leaving a surplus of \$13,391.63.

The election of officers was then proceeded with, and was unanimous in every particular, resulting as follows:

President—A. K. Godfrey, Winnipeg, Man.

Vice-President—A. W. Jones, Moose Jaw, Sask.

Secretary-Treasurer—Alan M. Stewart, Winnipeg, Man.

Assistant Secretary—S. A. Hamilton, Moose Jaw, Sask.

Directors for Saskatchewan—T. B. Patton, Regina, Sask.; H. Van Tassel, Moose Jaw, Sask.; Jas. Mergens, Weyburn, Sask.; H. Meillicke, Dundurn, Sask.; C. H. Wentz, Saskatoon, Sask.; A. W. Sherwood, Indian Head, Sask.; A. H. Foulds, Carnduff, Sask.; G. J. E. Walker, Rocanville, Sask.; E. Baker, Outlook, Sask.

Directors for Manitoba—W. J. Robertson, Cartwright, Man.; J. Playfair, Baldur, Man.; J. K. Robson, Treherne, Man.; E. E. Finch, Strathclair, Man.; Geo. Barr, Gladstone, Man.; W. Armstrong, Portage la Prairie, Man.; E. Wankel, Oak River, Man.; D. E. Sprague, Winnipeg, Man.; G. F. Robertson, Winnipeg, Man.

After the election of officers the Convention was adjourned until 2.30 p.m. At that hour, the new President, Mr. Godfrey, took the chair and introduced Mr. W. P. Dutton, who read a paper on "Retail Trade from a Wholesaler's Point of View." This paper was received with considerable applause, and a resolution was moved by D. E. Sprague, seconded by A. J. Gourlay, thanking Mr. Dutton and asking that the same be printed.

The question of an increase in the price of lumber produced on the coast was discussed on March 19th by the lumbermen in British Columbia in session, but no action was taken, though it was the consensus of opinion that the present market prices are too low. On April 13th the California lumbermen will meet to consider prices, and it is likely that shortly after this meeting the lumber manufacturers in British Columbia will again consider the question of raising prices.

John Hanbury, the well known lumberman of Brandon, says that in all his fourteen years on the prairies he has never seen lumber so active. He said that if conditions continue so favorable he would build another mill on False Creek, Vancouver, with a capacity of 75,000 feet a day. The demand for lumber was general, he claimed, and the visible supply would soon be exhausted. There was an estimated supply in the mountains of 180,000,000 feet, and more on the coast, but there were few plants running at full capacity. According to Mr. Hanbury, orders are pouring into the retailers as fast as they can be filled. His firm recently filled orders for fifteen large barns, and, what is better, the farmers are paying cash for their lumber.

Some of the Retail Lumbermen of Manitoba and Saskatchewan at the Winnipeg Convention.

The British Columbia Trade

Shingles and Uppers in Good Demand.

Vancouver, B.C., March 25.—Shingles are selling in the United States and Canada at a base price of \$1.85 to \$1.90. At this figure a fairly good business is being done in United States and Canadian markets. As \$1.85 can be readily secured in the States for shingles, the Prairie Provinces are compelled to pay that sum if they wish to deal in this market. The present price gives the manufacturer a fair margin of profit.

In the lumber market there is also a brisk demand for uppers, which certainly saves the situation, as the sale for rough lumber is very slow, at \$11, a price it does not pay to sell it at. There is no list price in the low grades and there have been instances during February where lumber of short length has been "put on the bargain counter" at \$9.50 for the lot, whilst other sales have been made at \$10.

Logs are scarce and dear, running from \$10 to \$12. About the middle of March the Washington shingle manufacturers sent over a strong delegation to interview the shingle manufacturers of British Columbia, with a view to getting them to close down. The meeting was attended by 75 per cent. of the manufacturers of the province. The representatives of the United States mills were heard at great length. At the present time shingles are at fair price, but this is largely due to the fact that the United States mills are shut down. For this reason shingles are sold by the British Columbia mills in the United States for a higher price than they would otherwise be, and the price is also made higher for the prairie provinces owing to the United States demand.

The Washington mills put up the argument that British Columbia is playing into the hands of the brokers, that the middlemen on both sides of the line are bearing the market in anticipation of the big spring demand, and that the only way prices can be maintained is for the mills on both sides of the line to cut off the supply. They say that the British Columbia mills are pouring 75 per cent. of their output into the United States and that, although shingles are now selling at \$1.85 to \$1.90, if the mills in Washington were forced to open in April, they would drop to \$1.50. As the United States market governs the trade, or price, the Washington men urge that the mills on both sides should combine to save themselves from "financial ruin" at the hands of the brokers, whom they accuse of playing off one side against the other.

The Lumber Trade in the Kootenays.

According to advices, lumbermen in the Kootenays and Cranbrook districts are pleased with the conditions now existing in getting out logs, and the prospect for the increased market for the manufactured product. The condition last year in the Kootenays was a matter of grave consideration. The shipments of United States lumber into Manitoba particularly affected the mountain trade, as their chief output is in the lower grades, which are not affected materially by the United States imports. On the coast the profit is chiefly made out of the higher grades, which are not imported to any extent from the other side of the line. Where the Canadian markets held for Canadians, however, there would be little trouble in disposing of the entire Kootenay product.

The opposition, of course, comes from the farmer. There may have been a reason for free lumber years ago, but there is no reason for it now. The plants established in the Kootenays, it is claimed, could supply Alberta, Manitoba and Saskatchewan with rough lumber, to say nothing of the output from the coast. Kootenay buys grain and hay and farm produce in the prairie provinces, and it is only fair that these provinces should buy their lumber from those who consume their products.

Timber Licenses to be Made Renewable.

Premier McBride, of British Columbia, has announced in the Legislature that the Government will bring in a measure at the next session, to make for the perpetuity of timber licenses until the timber is removed. His announcement was made in the following words:

"I would like to make a statement of some importance and one that is awaited by a great many people in British Columbia at this time with considerable interest. I refer to the question of the tenure of special timber licenses, which has been a subject of some controversy of late, and the principal mission of several delegations that have waited upon the Government in the past few months in regard to the timber industry in British Columbia, and I beg to announce to the House that the Government has come to the determination that the tenure of these licenses will, at the next session of this Legislature, receive the attention of the administration in the way of some provision that will make for the perpetuity of the licenses until the timber is removed, on such terms and conditions as the Government then may deem prudent in the best interests of the Province of British Columbia.

"It is considered wise in our judgment to defer this matter until

we shall have had the advantage of the advice of the Commission on Forestry presently to be appointed, and until we have had the advantage of perusing the conclusions to which that commission may come. So when I make this announcement this afternoon, while the matter is to receive attention next session, it must be on such terms and conditions as will, at that time, in the opinion of the Government be wise and prudent in the interests of the province."

This announcement will be received as good news by those who have invested in British Columbia timber. It will mean that the tenure will be something which can be depended upon. There will be no necessity for fearing that a limit will have to be lumbered hastily in order to obtain value for the price of the license. A limit holder under a permanent license will be able to take his time about the cutting. There will be danger of fostering speculation, and the consequent delay in the cutting of timber which is ready for cutting, but it should not be difficult for the Government to devise a means for preventing this, at least to a large extent. Timber limits will be worth a great deal more under the new arrangements and the whole lumber industry will benefit by the stability which will result.

In announcing the intention to bring about this change at the next session the Government has also been wise, as it has thereby removed any doubt as to what is to the future, and the effect will be almost as beneficial as if it were immediately done. The Government in the meantime, will have plenty of opportunity to study the situation closely and devise the best method for obtaining the object which they have in view.

Permanence of Licenses will have Good Effect.

Now that the British Columbia Government has signified its intention of doing something in the way of increasing the tenure of licenses next session, it is quite right that it should wait for another session to deliberate on the important regulations which would be necessitated by such a change. The fact that the Government has promised a favorable consideration of the request of timber holders to extend the tenure of a license will, no doubt, encourage the timber holders to adopt more approved forestry methods.

It would not be proper to enforce any particular forestry scheme on the license holder, by making it compulsory for him to follow any particular rule, but rather would it be more satisfactory to trust to the business sagacity of the license holder, to manage the matter to suit himself; for in doing this he would naturally cut his timber so as to get the most out of it, and not to waste it.

At present, wasteful methods exist. Under new conditions this waste would soon cease. To properly conserve the forests, the Government should, while lowering the license fee, increase the royalty proportionately, while extending the term of the license. Of course, the policy of high license fees and short tenure of license, meant that the license holder would get off his timber as quickly as possible.

It is now confidently expected that the Government will deal with the matter in a businesslike way, appointing a royal commission to go into the whole matter. A commission is to be appointed to regulate all questions relating to our forests, and it will be instructed to make recommendations for the regulation of lumbering operations on Crown lands.

Experts of repute from other parts of the continent will be asked to act upon the commission. It is very clear that regulations for British Columbia must be very different from those which would be satisfactory in Eastern Canada, or in the Middle States. The forest conditions are different in this province. Therefore there should be men of local knowledge and experience on this commission.

Do Shingle Brokers Bear the Market?

The following paragraph, in a local paper, was read by a representative of the *Canada Lumberman* to Mr. C. H. Gillis, of C. H. Gillis & Company, Limited, wholesale shingle and general building supply merchants: "Shingle men on both sides of the line sell, as a general rule, through the brokers, and the latter have for some time been industriously engaged in bearing the market, against the big spring demand."

Mr. Gillis, in regard to this, said that if the actual truth were known it would be found that the manufacturers themselves were selling, very often, less than the wholesalers. Speaking for the Canadian side of the line, he said that he had received a number of letters complaining that the manufacturers were quoting at lower prices than the wholesalers. He had sold to one broker, in the east, at a certain figure recently, and had been informed that a manufacturer had quoted, direct to the trade, at a less price than he had sold to the broker, who had to make his profit out of the trader.

Mr. Gillis had just come from Seattle and stated that he had called on four wholesale firms there. He was convinced that, in each instance,

these firms were endeavoring to get the highest possible price. He was certain that there was no attempt to bear the market. Whatever might be said of the control of prices by wholesalers on the United States side of the line, wholesalers did not control prices on the Canadian side, and they were in no way a menace to the business. Thus, from his own knowledge, he could unhesitatingly say that the statement quoted was incorrect as far as Canada was concerned; further, he did not believe it was true of the Washington State wholesale shingle merchants.

Being anxious to find out what could be said on both sides of the question regarding the shingle brokers bearing the market, the *Canada Lumberman* interviewed a well known shingle man, who said that, while he did not attend the joint meeting between the Washington shingle men and the Vancouver manufacturers, and consequently did not hear the remarks made about wholesalers, he knew from what wholesalers had told him that their plan of doing business was to get an order placed below the market and then go to another mill and declare the fact, showing the contract that had been arranged at the lower price.

This plan invariably led to the market being demoralized if enough mills could be induced to break away from going prices. This informant stated that he was quite of the opinion that wholesalers and brokers pretty well controlled prices. Through the efforts of the brokers the entire cut for the next three or four months had been placed. The big mills had their cut spoken for and the small mills had sold out to the brokers.

Further, he said that the Washington men had simply come over here to get the British Columbia mills to close down so as to help them out, and it was a fact that the prices ruling in Washington were the prices ruling on this side of the line, the United States market controlling the Canadian market. It was a vexed question whether the British Columbia mills should or should not comply with the request of the Washington mills in this respect.

Interesting B. C. Short Lengths.

Hon. Mr. Fulton has been instrumental in passing legislation granting licenses to hand loggers in certain sections of the province.

The Fraser River Lumber Company have opened an office at Regina. One day, recently, they cut 343,000 feet of lumber in ten hours.

The Timber Manufacturing Bill, with a clause giving the Government power to allow the exportation of poles and piles, has become law.

R. J. Watson, formerly of Northern Ontario, has been appointed to take charge of all the Dominion timber in British Columbia, says a Revelstoke despatch. In the Dominion election of 1904, Mr. Watson was elected to represent the district of Parry Sound.

Judge Howey, of New Westminster, B.C., has handed down a decision that every member of the logging camp has a right to take out a lien on logs for wages. Hitherto, this right was supposed only to be exercised by loggers. It appears, however, that cooks, boom men, and roustabouts have the same privileges.

The ship "Boadicea" left the Hastings sawmill in February with big timbers for Southampton; the steamer "Kish" also left for China with lumber about the same time. At this writing the French bark "Champigney," the British bark "Rowena" and the American schooner "David Evans" are loading at Hastings.

The "West Coast Timberman," of Tacoma, says that "85 per cent. of the standing timber in the eastern part of British Columbia, is said to be controlled or owned by citizens of the United States. Naturally all these gentlemen could easily argue themselves into believing that the tariff should be taken off timber and shingles."

The Fraser River Lumber Company, at New Westminster, has orders for the delivery by September next of 12,000,000 feet of lumber and timber. Of this amount 7,500,000 feet is for the Grand Trunk Pacific; the Rhodes, Curry Company, car builders, of Amherst, N.S., have placed orders for 1,500,000 feet; the Ottawa Car Company wants 750,000 feet, and orders to the extent of 3,500,000 feet are to be filled in the prairie district.

The Trustee Company, of Vancouver, has introduced a new plan of financing a building. That is the "Community of Interests" plan. This company will erect improved property in the business district of Vancouver, in such a way that a man with \$500 can invest that sum, or a man with \$5,000 to spare can invest that sum and become part owner of the property in question. The first building to be erected under this plan is now in course of construction at the south-east corner of Homer and Cordova streets.

According to provincial government estimates, the largest source of revenue for the coming year will be from timber licenses, which are expected to bring in \$2,000,000, while timber royalties are put down at a quarter of a million. The total estimated revenue is placed at \$5,948,626, and it is expected that the lumber industry will produce over one-sixth of it. The Government should be careful not to kill "The goose that lays this golden egg." As the mill men contribute so large a part of the revenue of the country they should be treated with more consideration by the Government.

What is the Matter in British Columbia?

The unsatisfactory condition of the lumber industry in British Columbia has called forth a forcible letter from Mr. E. H. Newton, of Vancouver, who expresses himself as follows:

The Editor of the *Canada Lumberman*—

Did it ever occur to you what a strange lot of people we are? Of course I know it has; but wherein have we ever had a picture before us to exemplify this peculiar feature of ourselves more plainly than the self-supplied, or otherwise taken picture of the mill men of British Columbia, taken either individually or collectively at the present time, and what are we going to do to improve this picture? Here is one of the greatest industries of which this province can ever hope to be possessed—an industry which, if properly handled, should bring returns worthy of the enterprise and energy put into it. But has it done so? If not, why not? Here is an industry which those interested should have entirely in hand, and be able to direct to the mutual advantage of all concerned, and without inflicting hardships on any one; but have they done so? They have done nothing of the kind. The past two years' operations have been the most disappointing that could be imagined to the mills of the Pacific coast, as well as to the mills of the interior of British Columbia, and yet who have we to blame but ourselves?

I am glad to know that the summing up of the past year's operations has at last roused some of the aggressors to sensibility, so that they have decided on a saner course in future. I do not uphold prohibitive prices in lumber any more than in any other line, but just why the mills of British Columbia should have been operated for the past two years without a profit, and some of them at a loss is more than I can understand. One thing I know though, and that is that most of the mill owners are onto their jobs, so to speak, this year, and are only accepting business that will give them a profit. There are still some "suckers" who are ready and willing to grab everything that is offered them, but let them have it. Better no business than that which is unprofitable—so the saner ones say. If we are conducting a legitimate business, and of this there can be no question, then why are we not entitled to a legitimate profit? If we are entitled to such profit, then why in the name of common sense do we not claim it? The situation is ours. All we have to do is to decide that we are tired of working for nothing; decide what prices will give us a fair profit, and then sell at those prices. Nothing could be simpler or easier than that, and yet it is humiliating to think that for the past two years we have not had the gumption to do this, but have thrown away our natural resources together with our energy. Ye Gods! was ever such a band of fools known before?

That there is an over-production by the natural operation of the mills may be, but of this there is some question in my mind; but that there would be less lumber used if a fair price which would give the manufacturer a profit were asked, I very much doubt. We often hear of bulls and bears on the market, but it is seldom that we hear anything about the hog; and yet this animal is met more often than either of the others. Just wait a little and you will see him on every side of you, and he is not hard to discern, and if you are not a very sound sleeper he will disturb your rest all through the night with his grunts, for just as soon as there are the least signs of reaction in the over-fed market these creatures want to keep their (usually little) plants running 24 hours a day, and thus they are endeavoring to keep glutted an otherwise healthy market.

That the mill owner has himself to blame for things as they exist, to a very large extent, must be admitted, and were they all equally responsible for the existing conditions, and equally ignorant of this responsibility, or the conditions either for that matter, then I would say let them take their punishment to a finish. But when we understand the truth of the matter—that there are many capable, honest, and reasonable men, who are compelled to suffer on account of a few of the more ignorant, who have missed their rut, and are lost in the depths of incapability to conduct a reputable business, and have grappled hold of the lumber business in a kind of way, and are trying to hold it down to their level, though they will fall off in time; then I say the situation is, well, er ("Here 'Bill,' finish this letter for me—'Bill.'") "damnable"!

White Labor Cheaper than Chinese.

An astonishing statement was made by another of the visiting Washington shingle manufacturers, who said that white men were cutting shingle bolts in the woods in Washington for 90 cents a cord. In British Columbia the Chinese and Japs are charging \$7.50 a cord. This authority said that in Seattle they paid 50 cents a cord less for bolts than is paid in Vancouver and that the Washington bolts were obtained under very much more difficult conditions than in British Columbia, many of them being secured from cut-over ground. He further stated that if assured of a large enough business he would import the white bolt cutters into this province and thus replace the Chinese. It would be interesting to know just how the unions would view this breach of the Alien Labor Law, when it meant driving out the Chinese with white labor.

As the Wholesaler Sees the Retailer

Interesting Address By W. P. Dutton Before Recent Convention of Western Retail Lumbermen at Winnipeg.

One of the most interesting events at the recent convention of the Western Retail Lumbermen's Association which was held at Winnipeg was an address given by Mr. Wm. P. Dutton, president of the Dutton-Wall Lumber Company, upon the subject of the retailer as seen by the wholesaler. Mr. Dutton said:

The "point of view" of a wholesaler in looking at the business of a retail lumberman cannot be said to be different in any marked degree from the view point of any other business man, except in that the wholesaler comes in close contact with the retail lumber trade and may, therefore, have better opportunities to know whereof he speaks. The policies of business men, however, in all lines are the same, and those common business principles which apply in all lines are applicable also to that in which you gentlemen are engaged. This being the case, the observations and criticisms of the business men engaged in the hardware, dry goods, grocery or any other trade would not differ in any material degree to the criticisms and observations of one engaged in the pleasant, but not always highly remunerative, occupation of supplying lumber to the retail trade.

It would be a mighty interesting thing, I think, to hear what a good live man engaged in any of these other occupations would say, if we could get him to make a little study of the way those engaged in the handling of the lumber products of the country handle their businesses. He would not limit his remarks to the methods of the retail trade, either, but would include the manufacturers as well as the list of men who could with advantage absorb some of the common axioms of business policy. He would have a hard time finding another class of manufacturers who would insist upon manufacturing and selling their product, regardless of their balance sheets, sacrificing their raw material and selling the manufactured article for a price actually less than it has cost them to produce it.

In looking over the reports of the various meetings of both manufacturers' and retailers' associations, of which there have been dozens within the last two or three weeks, it appears that the members of these bodies come to their meetings for a purpose and that that purpose is to hear criticisms on their manner of doing business, and I notice also that there is never a dearth of men who are perfectly willing to do the criticizing. After a flattering reception and a talk or two from the officers of the Association, telling the members what a fine lot they are and how the Association is prospering, and in divers ways having lulled the innocent member into a contented and salubrious state, those same officers proceed to lock the doors and fasten the windows and then deliberately "sick" two or three unrelenting critics onto the comfortably dozing members. They call this proceeding, "stirring them up a little bit," and from the complacent way in which the members take it, I gather that, after they once get broken in a little, they do not mind it so much after all, and get after awhile so that they rather enjoy the excitement,—and in that they are right, for if we do not meet together to get a little plain talking and a shaking up, then what are we here for? The man who thinks that he is just about the best lumberman who ever hoisted a two by four and who knows all there is to know about the business had better save his car fare and stay at home, for he has no business here. If, on the other hand, he does not think that he knows it all, but, nevertheless, always goes away the same man as before, and what little he gathers he tucks away in his brain just to think about, but not to put in practice, God help him, for he is beyond redemption. But if, after having seen where you can make an improvement or two you go about trying, only TRYING to put those improvements in practice, then rejoice for you will be saved.

Now, gentlemen, it would come with poor grace from me to lay much stress on any shortcomings which a portion of the retail trade may have in its relation with the wholesaler, but I cannot pass to other and more vital matters without first mentioning to you the injustices

which the wholesaler, through no fault of his own, often suffers from some of your hands.

First and foremost among these is the slipshod fashion in which many retailers attend to their financial matters. It is a practice in this country to make collections by draft and a mighty poor practice it is, but one which has been made necessary by the easy-going dealer who will never send in a remittance of his own volition, but has to be shaken into it by means of drawing upon him. In the United States the last resort is the draft, but here it is a common practice for the seller to make draft immediately upon shipment of the goods, and such a proceeding is not regarded as any reflection whatever upon the credit or the integrity of the buyer. It is considered a convenient way in which to be reminded that he has to pay for the goods—otherwise he might forget it. This system of making collections has no particular disapproval of the seller if it could end there, but to have this draft come back a few days after it is due, with absolutely no word from the drawee, is not only mighty exasperating to the drawer, but is a distinct injury to the drawee as well. I hope that none of the members present are addicted to this custom, but if there should be

one here, I say to him, for his own good, do not let a note or draft go back without first writing to the drawer advising him of the fact and asking him for further accommodation, or, at least, write him at the time the final presentation is made, advising him that the draft is being returned and the reasons why. Do this to protect your own credit and not for the sake of the man who sold you the goods. He will think more of you as a business man, and, believe me, when I say you will benefit in dollars and cents by following this policy, as well as have the business respect of those with whom you do business. In this connection, I might refer also to the man who does not answer his correspondence and lets letter after letter come to him without so much as an acknowledgement, and what I have just said applies to such a dealer, tenfold, for it is impossible to attribute business ability in any degree to a dealer who is so devoid of the first principles of business dealings and, we might also say, personal courtesy—and yet, it would surprise you to know how many of them there are.

A second injustice to the wholesaler is the custom which we might say exists in cancelling orders already placed, because of an anticipated drop in prices. This peculiar interpretation of a contract of sale was conspicuous a year ago last fall and last winter, when the panic and the poor crop gave evidence of lower prices. I do not believe that this custom will be

defended by anybody as a just one, nor do I believe that the retail dealer would stand for a cancellation of an order because the market had strengthened and the wholesaler thought he could make a few dollars by refusing to ship the order. I recognize the fact that there are cases in which the manufacturer will delay and put off time and again the shipment of an order because he thinks it has been sold too cheaply, but this fact just goes to show that some men in any line of business will take an unfair advantage of others if they get the chance, and if I was sure that a manufacturer had done that to me, I would not buy another stick from him again as long as I lived. On the other hand, those of you who may have had such an experience may from it gather some idea of how the manufacturer feels when a cancellation comes in for the same reason. I do not refer now to those dealers who, on account of crop failure, were obliged to cancel orders which they found could not be used owing to changed conditions, but to those who, immediately upon finding out that the order had not been shipped before the cancellation, went out into the market to find out how much cheaper they could buy. I have in mind a concern who last summer placed an order with us for twenty-five cars, because they

Wm. P. Dutton, Winnipeg,
President Dutton-Wall Lumber Company and Great West Lumber Company.

thought they saw signs of the market strengthening and then refused to send us specifications because prices had gone into pieces at the coast and they found they could do better. A month or so later we received an enquiry from them asking us for prices on five cars, just as though they had never placed an order with us at all, which we refused to quote upon. I confess that this was extreme, but it shows to what lengths some men will go, sacrificing what they know to be their best business instincts and jeopardizing their position with their business associates for the sake of a temporary gain, small in comparison with the business standing which they have lost.

It is sometimes a difficult thing to tell just the line where good, clean, but wide-awake, business policy stops, and where the sharp and questionable practice begins. I am willing to give the buyer the benefit of the doubt and attribute what I might consider questionable practice to an honest difference of opinion between him and myself. It is the desire of all of us to buy as cheaply as we can and in order to do this we have to be awake and know where we can get the best prices. If you send out enquiries to several wholesalers, asking for prices on one or five cars of timber and you get their prices as requested, I want to ask you to answer in your own minds, whether or not the lower price (assuming that the quality is the same), should get the business, without further negotiation, or whether you are, in justice to that wholesaler and to your own better nature, justified in advising one of the other concerns that you can buy for such and such a price and will give them the business if they will meet it? In other words, have you the moral right to use bad faith with one concern, thus getting it to quote their lowest price on your requirements, so as to use it as a battering ram against the concern which finally gets the order. This is quite a common practice and it seems to me to be in the same category with the practice sometimes used of trying to get better prices from one traveller or wholesaler by misrepresenting alleged prices which have never been quoted you.

These are some of the things which naturally come into the mind of one who considers the relations of the wholesaler with the retail dealer. But the scope of vision of one engaged in the wholesale trade does not end with those things so closely gathered under his nose. His horizon would be wide enough that he can see other aspects of the retail trade—aspects which reveal conditions and practises which do not concern him in the least as a wholesaler, but are of vital importance to the retailer himself. A birdseye view of the retail lumber trade of Western Canada reveals the same unpleasant features which accompany the lumber business over the entire continent. It is a matter of surprise that the shortcomings of the trade should be so general, and it can only be explained by the fact that these shortcomings must be a part of the business itself and cannot be laid at the door of the dealer. Nevertheless, the lumber lying inert in the yard cannot shake itself loose of the barnacles which seem to pursue it into each and every corner of the continent, and it lies with the men who own the lumber to free it from its leech-like companions. Is it possible, I ask you, in all earnestness, to find any other business in which the chief delight of those who run it seems to be in carrying it on at a variance with all the business principles recognized by those engaged in other occupations? Can you find any other business where those engaged in it are constantly in danger of having a fight precipitated on their hands, because of the avarice of its members or because of the flagrant violation of the common amenities which should exist between those members? Can you find any other business in which the largest part of the capital invested is in the hands of the customers who have bought goods and who have not paid for them? Can you find any other business on this green earth where the manufacturer and wholesaler dares, with impunity, to sell his product piecemeal to the consumer? I answer “No” to all these questions, and now why is it that the lumber business should occupy such a conspicuously unique position at the head of all the trades? Why do you have trade fights which only stop when one or the other of you is down and out? Is it because you like to fight? Is it because you do not want to get a profit on the lumber you are selling? Is it because you are any different in any other way from other men?

The way the consumer treats you on his accounts is enough to make a preacher swear, and you dealers are so blamed afraid that you won't get your share or more than your share that you will do almost anything (if you have to) to gain your purpose and do a lot of business—even if you bust trying to do it. “The competition is so blamed keen” you say. Yes, competition is blamed keen, that's the fact—so keen that the consumer has got you all down, and every once in a while he rubs your nose in the dirt and you don't yell, because you are afraid you will lose his business. And then along comes some wholesaler, and he sells a car of lumber at wholesale to this same customer who has had the satisfaction of maltreating you all these years because you were a poor devil of a lumber dealer. You kick and swear around like four of a kind when you see that car of lumber being unloaded next to your yard and carted away, and you make up your mind the wholesaler will hear from you, when you get at him. Your neighbors will hear of it up and down the line, and sympathize with you and tell around how such practises ought to be stopped. After a while the wholesaler or his

salesman, or a commission man selling his goods comes along, and, if he will shade the price 5 cents a thousand less than you can buy for elsewhere, you and all the other fellows, up and down the line and every other place, fall all over yourselves to buy, because you can save \$1 on the car. You will all of you sit back and let the other fellow do the refusing and let him lose the dollar, or the \$5 or the \$20, whatever it may be.

Why do you buy of the man who has sold to the consumer in your town or at some other place you know about, showing conclusively that he is not disposed to protect the trade, to which he sells 95 per cent. of his lumber? You don't buy because you like his methods any better than you did before, but because you want to save the few dollars by buying his cheap lumber, and you will usually find it is cheap enough too, when you come to unload it. Do you suppose that you can go into any wholesale house in this city and buy a pair of shoes, an overcoat, a bag of sugar, a stove, some patent medicine, tobacco, or anything else, I do not care what it is? Of course, you can't. Why? Because the wholesaler will not sell it to you. He is afraid of his trade and wants to protect his and his competitor's customers. But the lumber manufacturer does not hesitate when the trade is dull to dump some of his product into the retailer's territory at wholesale prices; and, let me tell you, that the example is one not difficult to follow, and it is up to you and your co-dealers as to whether or not the practice shall become more and more common. If you want it to increase, maintain the same indifferent attitude and it will increase fast enough.

Now, I am not saying all these things just to criticize and stop there, but to see if we cannot find the cause and the remedy. It is not difficult to find. This price cutting, these long, never-ending open accounts, these fights and scraps, sometimes taking in a whole district, this trembling fear of the customer and a delivery of body and soul to him if he will only buy a few boards from you. This buying where you can get a shade the best price, regardless of your feelings and convictions. This cancellation of orders when you know it isn't right, and these questionable practices to get your material just a little cheaper. All these instances are the result of the same cause, and what is this cause? I will tell you. It is the nature of the “business” and nothing else. I know of no other commodity in the world which so stimulates competition beyond all reason as that of lumber. If there were dealers who handled nothing but sugar and the prices and terms of discount and of sale were not dictated by a trust, you would find much the same condition of affairs, for sugar is sugar the same as lumber is lumber. The dealer in sugar is protected by the fact that he sells other goods also and the amount of sugar sold at a time is so small that the customer does not care to make much trouble getting prices and “jewing” all the other dealers in town. The dealer in almost any other commodity than lumber has the advantage of makes, qualities, styles and a dozen other characteristics which distinguish his particular line from that of the other dealers so that a true comparison of values and prices cannot be made by the prospective customer. But the poor lumber dealer—his lumber is just lumber, and that's all. Here is the chance for the consumer to get in some of his “fine” work. He doesn't give a hang who made the stuff and whether the cut and dressing is 1907 or 1908 style. What he wants is “price” and a good fat “discount” and to pay for it “if we get a crop year after next.” He gets your lowest price on his bill and then chases over to the other yard or the other two or five yards and shows them what “you” can do for him. Then he comes back to you again and makes the second round and before long he has you all backed up against the wall shouting for help while he carries off the lumber at barely cost price and pays for it when he gets good and ready. You are all so afraid of each other when the customer begins his little game that you are ready to fight your own shadows, and honestly it is a wonder you are able to keep things in as decent shape as you do. You have a condition of competitive strife to deal with more fierce than any other class of tradesmen, and in order to win out, in face of it, you are obliged to carry on your business in a way which is the wonder of those engaged in other trades.

It is useless to point out to you that two-thirds of your business is a banking business and one-third lumber business, for you already know it from bitter experience. It does no good to point out to you that after deducting a reasonable salary for your own time and labor and interest on the amount which you have invested and on what you owe, that the actual profits from the “business” are little or nothing, for you already know it is a fact. You know as well as anybody that you could effect a big saving if you could make your collections. Yet, the remedy is in your own hands and nobody else can help you. The issues are distinctly local in every case and lie between you and your local competitor. If the law does “not” allow you to arrange matters of price, it at least will not hinder you from making every effort to have the competition one of friendliness and not one of rancor. An understanding and a carrying out of “some” system of credits is perfectly within the law and perfectly justifiable from even the customer's point of view. A friendly intercourse and feeling can be as easily developed as an unfriendly one if you both but think so. A decent and legitimate profit and the payment of your accounts in reasonable time is your due as well as the due of other men. A great help lies in the realization that we are all much

alike and want our share of the business that is going. The new dealer in a town should not expect half the business in a two-yard town with an old dealer thoroughly established, but other things being equal, he will get it in time and the old dealer may as well make up his mind to it first as last. If you know each other pretty well and drop around on the other fellow once in awhile, half the battle is won, so far as ruinous price cutting is concerned. The more prompt payment of accounts is simply a matter of adjustment. It would seem to me that an attractive discount for cash in 30 or even 60 days would be an inducement and not mean any great loss if you are getting your price.

In the past, gentlemen, the sailing has been comparatively easy. Your competitive troubles have been confined to your other local dealer, who is at least always available. Before closing I wish to say just a few words on the retail lumber business of the future as seen through the eyes of one wholesaler. There are breakers ahead, and some of the craft which precede us are beginning to enter the rough waters already. I refer to wholesale dealers who cater direct to the consumer who has money and who are already making their presence felt in the communities south of the boundary line. The immutable law of the survival of the fittest applies to the business world as to no other. For reasons I have already rehearsed, the retail lumber business has always been in a bad way. To recoup losses suffered in a war of price cutting the surviving dealers often have to get more than legitimate profits. The carrying of outstanding accounts with the loss of many has to be paid for by somebody, sometime, and if the dealer survives the solvent and reliable consumers of the community have to make up the loss. Incompetency and carelessness are easy prey for competition. Met L. Saley is probably the best informed man on the retail trade of the United States living, and he declares that the lumber trade has the largest percentage of incompetent, unbusiness-like and short-sighted men of any other retail business. If you will take a trip down to Minnesota, through Iowa and into Nebraska, you will not need to go further to see the signs of the times. A few years ago you heard complaints of manufacturers shipping direct to the consumers in car lots. Then you began to hear about the catalogue houses, and now if you go there you will find enterprising men settling themselves down at good central points and shipping not only sash and doors and blinds and mill work but lumber in small lots right into towns where lumber dealers are and have been firmly fixed for years. This is only a natural result of the unsatisfactory state into which the trade has allowed the lumber business to drift. It is the same old story of loose credit system, mainly coupled with other competency. It is only a question of time, gentlemen, when you will have to face much the same circumstances. If you could only forestall the arrival by reforming your own faulty system "now," how much trouble you would save yourselves and your successors later on.

Let me read you a letter I received the other day from a farmer's publication devoted to the interests of a class of men who can show any of us a trick or two in the art of co-operation:

"Dear Sirs:—

"At a recent convention held by the Grain Grower's Association the lumber question was very much in prominence.

"A number of delegates discussed the matter of purchasing lumber in car-load lots, and requested the Association to take the matter up and see if they could not facilitate matters by supplying lumber to the farmers direct, and thus secure for them wholesale prices.

"If you will glance through our latest issue, which we are mailing you under separate cover, you will find one or two half-page lumber advertisements.

"As this business was unsolicited, it occurred to us that you might be interested in placing your product before the farmers in a similar way.

"The writer would be pleased to take the matter of advertising up with you.

"Thanking you in anticipation of an early reply, we remain,
"Yours truly "

You see the time is coming, and who can expect it to be otherwise? It is all right from the point of view of the consumer, and if you cannot deserve to hold your place in the scheme of things by proving your usefulness, then you will have to retire. It was always supposed until recent years that the retailer was a necessary factor in the carrying out of the economic system, but if he can be dispensed with it will be an economic gain and economic laws will not be turned aside. It is up to the retailer in any and every line to show his usefulness as a cog in the distribution of commodities from the manufacturer to the consumer. In many of our towns, both here and in the United States, the mail order houses are giving him a hard tussle to prove that he is a necessity. The lumber merchant is in the most favorable position of all to hold his position, owing to the extreme difficulty with which his community can be provided with lumber direct. As an economist I would say "go it, both of you, and may the best man win," but as an interested and prejudiced party, I say, "Fight this tendency to supply the consumer direct, as you would fight death. Do not let it get a foothold, and if you stand together, let it be in this above all others." Remember, however, that the struggle is still in front of you, however much you may

fight to postpone it, and it is not to be half won when you realize once and for all that unlimited time in your credits, ruinous price cutting, neglect of stock in your yards and lack of diligence in your collections are besetting sins which will have to be atoned for in the end when the day of judgment finally comes.

I have tried to tell you frankly, gentlemen, how the retail lumber trade looks through at least one wholesaler's spectacles, and I thank you. (Applause.)

Trade Enquiries.

The Dominion Government Trade and Commerce reports contain the following trade enquiries. Readers of the "Canada Lumberman" may obtain the names of enquirers by writing us, enclosing stamped envelope and stating number of enquiry:

134. Soft birch.—A Manchester firm desires to correspond with Canadian shippers of soft birch.

140. Veneer.—A Manchester firm asks for prices of 3-ply wood veneer from Canadian manufacturers.

143. Pine deals.—A Manchester firm asks for prices of pine deals from Canadian exporters of same.

147.—Pine doors.—A Manchester firm now obtaining supply from United States asks for description and prices of pine doors from Canadian manufacturers.

153.—A London, Eng., manufacturing enterprise which uses large requires logs with the bark on, in birch, ash, elm, white oak, beech, quantities of timber, and has in the past been obtaining shipments from other sources, would like to contract for regular supplies of logs from Canada, if favorable conditions can be arranged. With that object in view the company would be pleased to receive quotations from Canadian shippers, if possible c.i.f., London f.o.b., Canadian seaport. The company requires logs with the bark on, in birch, ash, elm, white oak, beech, bird's-eye maple and ordinary maple, and these are wanted in lengths of 6 and 7, or 12 and 14 feet, with about 18 inches diameter inside the bark. The logs must be good, sound and straight ones, and free from knots and strakes. Shipments would have to be about 100 logs at a time.

187. Yellow pine.—A manufacturer of picture frames wants to get into touch with dealers in pine suitable for picture frames.

183. Representation.—A Glasgow firm of commission merchants desires Canadian supplies of pulp for manufacture of paper.

259. Wood candy pails.—A North of England firm largely importing all kinds of woodenware, would be interested in hearing from Canadian manufacturers of wood candy pails.

A correspondent of the *Canada Lumberman* wishes to obtain the address of manufacturers of automatic shim machines with boring machines, for shimming railroad tracks.

An Average Cut for the Miramichi.

A recent despatch from Chatham, N.B., says that conservative estimates of the lumber shipments from the Miramichi during the coming summer season place the amount at 65,000,000 superficial feet. Of this amount probably 20,000,000 will be stored or wintered lumber, so that the cut for the present season on the Miramichi and its tributaries will be about 45,000,000.

An average cut, however, is anticipated, although nearly all lumbermen announced that they would curtail this winter's cut owing to the bad state of the lumber market, yet the season was such an exceptionally good one for operation that there is little doubt but that the cut is much larger than at first contemplated. The firms operating this year are: J. B. Snowball Company, Limited, Miramichi Lumber Company, who also operate on the Hutchison properties, Timothy Lynch, John O'Brien, James Robinson, John P. Burchill, D. & J. Ritchie, Michael Welch, Damery & McDonald, J. D. & D. J. Buckley, John Maloney and numerous other smaller operators.

Cutting has been finished and logs are now on the banks ready for stream driving as soon as the river opens. From present indications the early opening of navigation is expected and the mills will be running full blast early in May.

The price at present is a good one, being about \$14.50 per thousand, the usual run of the mill gang sawing, and is as high as it was in 1907 before the slump occurred. Few sales have been made, however, as lumbermen are holding for an advance. Timber trade journals incline to the belief that prices will be a little stronger, but several state that the New Brunswick deal producers should take into consideration the present unsatisfactory position of the market in England and modify their present inflated notions of their f.o.b. values.

The Snowball concern has sold its entire cut of Miramichi pine deals, ends and scantlings to Robert Cox & Company, Liverpool. Miramichi shipments a few years ago averaged one hundred millions. The yearly decrease at present is due to the fact that the Miramichi Lumber Company now turns its logs largely into pulpwood and ships to the States what formerly went to England. Their average cut is about 30,000,000.

The next annual meeting of the Canadian Manufacturers' Association will be held in Hamilton on September 14th, 15th and 16th, 1909.

The Hoo-Hoo Meeting at Winnipeg

A splendid concatenation of the Hoo-Hoo of Central Canada was held in the Commercial Traveller's Building, Winnipeg, during the recent convention of the Western Retail Lumbermen's Association. The large attendance of lumbermen in Winnipeg, for the convention, resulted in the concatenation being one of the most successful ever recorded. Much of the credit for the success of the event is due to Mr. George H. Wall, the new Vice-Gerent Snark. Mr. Wall was fortunate in possessing the services of an able staff of assistants. The officers appointed for the concatenation were all well posted on their work, so that the affair was managed throughout without a hitch. Mr. W. B. Tomlinson, who acted as Junior Hoo-Hoo, also deserved particular mention for his splendid floor work. The officers who had charge of the concatenation were as follows:

Vice-Gerent Snark, G. H. Wall; Senior Hoo-Hoo, E. D. Tennant; Junior Hoo-Hoo, W. B. Tomlinson; Scrivenoter, J. Spencer; Custocation, J. J. Shotwell; Arcanoper, A. K. Godfrey; Jabberwock, S. L. Raymond; Gurdon, D. J. McDonald; Bojum, Fred. A. Shore.

The candidates, fifteen in number, who were elected by ballot, were as follows: John Adam Taylor, manager of T. Taylor Lumber Company, Boissevain, Man.; Thos. MacKenzie Ralston, editor "Herald," Fort William, Ont.; Ernest Franklin Gardiner, retail lumberman, Quill Lake, Sask.; Roy "Maple Leaf" Bullen, general agent Chicago, Great Western Railway, Winnipeg; John "Sault" Peterson, general agent Soo Line, Winnipeg; Edward Harold Stenshorn, Empire Sash & Door Company, Winnipeg; Harry De Wolfe Krebs, travelling salesman, A. R. Rogers Lumber Company, Enderby, B.C.; Chas. John Lee, manager of the North American Lumber & Supply Company, Winnipeg, Man.; August "Duluth" Brostedt, district agent Northern Railway, Winnipeg; Charles Bertram Little, lumber traveller, Winnipeg; Paul Ludwic Somerfeld, partner, Irwin & Company, Saskatoon, Sask.; Nicolaus "Tanbark" Grest, of Grest Bros., lumber dealers, Watrous, Sask.; M. G. Smith, of Kilgour & Smith, lumber dealers, Ninga, Man.; Arthur Charles McElroy, salesman North Pacific Lumber Company, Barnet, B.C.; Henry Cecil McWilliams, lumber buyer, Monarch Lumber Company, Winnipeg, Man.

The initiatory proceedings were carried out with great success and when they were completed, a number of interesting entertainment features were introduced, among them being a clever boxing bout. This was followed by a banquet at which there were 175 guests present. Music and special entertainment were provided during the banquet, which included a number of characteristic sketches, vaudeville, sleight of hand turns, etc. Several interesting addresses were delivered and the banquet came to an end at 3 a.m.

Caterwaulings.

According to the editor of the "Western Lumberman," the caterwaulings, which occurred during the initiation, were numerous and interesting. He describes a few of them as follows:

The way Springgate lived up to his name was a surprise to the uninitiated Kittens.

Birnie was on deck as usual. Jim Suttie says he and Birnie are going to run for the Senate.

Tommy Dunn "done" all he could to make the boys feel at home.

Bill Tomlinson has been nominated for centre rush for the Hoo-Hoo football team. He will have Roy Bullen and Stan Raymond for right and left guards. Louey Palmetier is in training for quarter back, dieting heavily on doughnuts.

A. Brostedt—Jim Hill's personal representative in Canada—came from Duluth to join the Hoo-Hoo at Winnipeg.

John Peterson, general agent of the Soo Line, claimed that the late Thomas Lowery was the entire thing, but now is willing to admit that while Mr. Tom. Shaughnessy is King of the Canadian Railways, he stands a good show to rival Hill and Harriman.

Ralston broke into Hoo-Hoo, and broke his sox doing so. The newspaper business is a hard one to be in and keep socks darned.

Lee says he likes Duck stew better than dancing.

Roy "Maple Leaf" Bullen says he never was a Highlander before.

Mr. Tomlinson makes one of the best Junior Hoo-Hoo we have ever seen and we have seen them at Toronto, Chicago, St. Louis and Minneapolis during the past seven years.

What is the matter with starting the concatenation in future at 9.09 a.m., in order that the boys get to the "session on the roof" before midnight of the same day.

Stan. Raymond was greatly perturbed because someone did not turn in a Kitten's application. A vigilant search was made for the paper and after roaming the gardens east and west, it was found in Raymond's southwest pocket.

Jim Ovas says the goat never had a decent feed since he owned it.

Chandler will have his hair cut on the Queen's birthday. Free drinks.

Sam Hamilton says the Winnipeg girls are not as courteous as those in Saskatoon.

Jay Spencer raked in the shekels at the rate of \$9.99 per nine minutes.

Roy was too large to get through "the tunnel," but he put in a couple of extra stunts. His Highland costume was "a bird." By the way, Roy never told us he was Highland Scotch. We thought his acquaintance was limited strictly to "hot Scotch."

Supreme Scrivenoter Baird sent us a letter. We tried to induce our friend Jim to come up here, but he said he "was unable to purchase a buffalo robe in Nashville." What d'ye think of that?

Winnipeg expects to have the big annual Hoo-Hoo conclave up here some year. Let it be 1910, or during our World's Fair—the Selkirk Centennial. Who will push it?

The dreadful cannon, the frisky goat, the darksome tunnel and electrocution by the death-chair-route cannot scare a Hoo-Hoo.

Birnie had the nerve to challenge the editor of this Journal to a 5-round contest. We accept gladly, provided Birnie weighs in the feather-weight class, ties one hand behind his back and lets it run to a finish.

Mutual Fire Insurance a Success.

The annual meeting of the Retail Lumbermen's Mutual Fire Insurance Company was held during the recent convention of the Western Retail Lumbermen's Association at Winnipeg.

On Thursday, February 11th, the annual meeting of the Retail Lumbermen's Mutual Fire Insurance Company was held and the statement published in our last issue was read to the members.

President J. A. Thompson being absent in California, his address was read by the Secretary. The Secretary's report was also read and adopted. This report showed that the company was in a splendid financial condition and considerable progress had been made during the past year.

The election of officers for the insurance branch then took place, and resulted as follows:

President—J. A. Thompson, Winnipeg.

Vice-President—J. B. Sinclair, Winnipeg.

Treasurer—A. K. Godfrey, Winnipeg.

Secretary—Alan M. Stewart, Winnipeg.

Directors—T. B. Patton, Regina, Sask.; J. C. Graham, Winnipeg, Man.; T. L. Arnett, Souris, Man.; H. Meilickem, Dundurn, Sask.; F. McPherson, Binscarth, Man.

The insurance reports referred to the splendid progress that had been made during the past year, enabling the cost of insurance to lumbermen to be reduced lower than it had ever been before in the history of Canada.

After the Convention proceedings a large number of the lumbermen took occasion to visit various points of interest in the city, and some of the members were also connected with curling rinks which were taking part in the bonspiel, and stayed over for the various events.

Personal Mention.

Mr. Isaac Baker, of the Edward Hines Lumber Company, Chicago, visited Toronto recently. He reports a great revival of business in Chicago. His company's business for January and February was greater than during any previous January and February. The building trade has picked up greatly and the demand for lumber in Chicago is expanding rapidly. In the country also, although not so lively as in Chicago, business has improved extensively.

A. J. De Laplante, of the De Laplante Lumber Company, Toronto, Ont., spent several days in New York recently, looking over the general trade situation, and reported there that conditions in Canada favored a very satisfactory year in the lumber business.

J. M. Diver, manager of the Cleveland Sarnia Saw Mills Company, Limited, of Sarnia, Ont., visited New York recently and attended the annual convention of the N.W.L.D.A. He also devoted some time to looking over the general market situation.

Frank Hawkins, secretary of the Canadian Lumbermen's Association, favored the *Canada Lumberman* with a call last week. Mr. Hawkins reports that the work of the association is meeting with encouraging support and is increasing rapidly in volume.

S. M. Carrier, of Buffalo, N.Y., expects to go to Bathurst, N.B., about the middle of April, to start the new mill of the Bathurst Lumber Company, in which he is interested.

A Pittsburg, Pa., report says that Robert McDonald, president of the McDonald Lumber Company, has become interested in a Canadian proposition which promises to occupy a prominent place in the lumber business.

The death of Mr. H. D. Warren, president and treasurer of the Gutta Percha & Rubber Manufacturing Company of Toronto, Limited, will be a cause of deep regret to all who came into touch with Mr. Warren. Mr. Warren's death occurred on March 5th at his residence, "Red Gables," Toronto.

WANTED & FOR SALE DEPARTMENT

PUBLISHERS' NOTICE

Advertisements other than "Employment Wanted" will be inserted in this department at the rate of 15 cents per line each insertion, on the basis of 14 lines to an inch, payable in advance. When four or more consecutive insertions are ordered a discount of 25 per cent. will be allowed.

Advertisements of "Employment Wanted" will be inserted at the rate of one cent a word, net. Cash must accompany order.

Advertisements must be received not later than the 10th and 26th of each month to insure insertion in the subsequent issue.

Large Tract of Timber

The property of the Canadian Land and Immigration Company of Haliburton, (Limited)

There are large quantities of Railroad and other timber including Cedar, Hemlock, Spruce, Balsam, Basswood, Beech, Cherry-Birch, Maple, also considerable Pine, Elm and Ash on this tract. It is well served by two railroads. The company are prepared to sell this timber in blocks ranging from 2,000 to 10,000 acres or more if desired.

There are several good mill sites on the property. This would be a good opportunity for parties who are at present cut out and are looking for a new location.

Maps and plans and further particulars can be had by applying to

TIMBER LIMIT ON LAKE HURON, CON- tains 1,700 acres mixed timber, sawmill, dock, etc. Plenty more timber can be bought. Will be sold cheap as proprietors have other business. Box 47, Hepworth, Ont.

British Columbia Lands

WE HAVE FOR SALE LARGE OR SMALL tracts of choice British Columbia Timber. Eighteen years experience enables us to select the good ones. Correspondence with investors solicited. CRUISE TIMBER EXCHANGE LTD., 615 Pender St., Vancouver.

For Sale

OVER 1000 ACRES OF TIMBER LAND, with about 100 acres of clearing on all lots, and some buildings, and lots of cedar, hemlock, birch, maple, oak, pine, and other merchantable timber, including a good mill site on Thessalon river close to a railway with good shipping facilities. Lots all patented and most cover the mining rights. Splendid chance to move a good saw mill, as other timber can be had also. Price only \$3,000. Apply to P.O. Box 100 Bruce Mines, Ont.

Timber Berth for Sale

CONTAINS 75,000,000 FEET OF SPRUCE, 40 miles from proposed G.T.P. divisional point on McLeod River, (210 miles west of Edmonton) and 20 miles from nearest point on river touched by railroad. River drivable, berth easily logged. Area 23 sq. miles. Timber from 12" to 35" through. Limit will produce over 2,000,000 railroad ties worth 40 cents average. Tremendous demand for ties at present time which is likely to continue for some years. Reasonable time will be allowed for examination. Price \$35,000. W. S. HEFFERMAN, 257 Jasper Ave., E., Edmonton.

Important Sale of Valuable Timber Limits, Saw Mills, Logs, etc.

SEALED TENDERS WILL BE RECEIVED up to and including TUESDAY, THE FOURTH DAY OF MAY, 1909, for:

1. The timber berths comprising the township of Roberts and all of the township of Kitchener, with the exception of three square miles thereof, in the district of Algoma. These berths also are virgin limits of excellent white and red pine very convenient to operate and close to the railway and will be sold together or separately.

2. Timber berth known as "107" on the Spanish river in said district, the license thereof including all woods. This is an excellent berth convenient both to railway and the Spanish River.

The highest or any tender not necessarily accepted. For terms and further particulars, including estimates, apply to:

LEES, HOBSON & STEPHENS
 Vendor's Solicitors,
 Hamilton

Statistics recently issued show that during the year 1908 the car building companies of the United States and Canada completed 78,271 cars, or only 27 per cent. of the number of cars built in 1907. These figures include all cars built except those for traction companies. Of the cars built in the United States last year 66,751 were freight cars for use in that country, 1,206 for export and 1,566 for passenger use. During the year Canada built 8,593 freight cars for home use, exported 5 and built 79 passenger cars for use in the various provinces. These figures do not include the output of the car shops owned and operated by the railroads.

In view of the small number of cars which were turned out last year compared with previous years, the opinion seems to be general among both railroad officials and lumbermen that car lumber will be in strong demand during

1909, and that the number of cars used will be largely increased.

The figures for car construction during the last four years, with the Canadian output included, are as follows:

Year	Freight	Pass.	Total
1908	76,555	1,716	78,271
1907	284,188	5,457	289,645
1906	240,503	3,167	243,670
1905	165,455	2,551	168,088

**Tram Car Wheels**

made from a special mixture of Iron, are stronger, longer lived, lower in price and lighter for their strength than any other wheel. Write for prices and samples of metal.

Reliable Veterinary Remedies

No logging outfit is complete without a supply of reliable veterinary remedies. Getting the wrong kind means the loss of the use of your horses when time is valuable.

Johnson's Veterinary Remedies are guaranteed never to fail when used as directed. You get your money back if they ever do.

Johnson's Horse Liniment No. 1. A penetrating Alcoholic Liniment. Put up in one gallon jugs, with full directions, per imperial gal. \$4.50
Johnson's Horse Liniment No. 2. A combination of the best oils used as liniments, imp. gallon \$3.00
Johnson's Horse Colic Remedy. A sure and speedy cure for colic. Imperial gallon \$5.00

Johnson's Veterinary Healing Ointment. Positively the best all-round healing ointment made. In use by the largest owners of horse flesh in Canada. Put up in 2 lb tins, each \$2.25 or in ½ lb tins, per dozen \$3.50

Johnson's Condition Powders. (Concentrated). Put up in bulk, per lb. 30c. These goods being put up in bulk are more economical than others, as cost of bottling, etc., is saved.

CAMP REMEDIES. In addition to our Veterinary Remedies we make a line of medicines for lumbermen, including a strong, penetrating liniment, healing ointment, cholera cure, liver pills, cough syrup, in fact anything in the form of Camp Drug Supplies. We know that there are no better remedies made than those we offer. There may be others nearly as good, but they lack our guarantee. Satisfaction or money back. A trade discount of 10% allowed off all orders amounting to \$100.

Send postal for printed matter.

Review of Current Trade Conditions

Ontario.

The lumber market throughout Ontario is generally depressed and irresponsive to the offerings made. This is partly attributable to the fact that so many large undertakings are in an embryo stage. While much is looked for, practically nothing has commenced. It is difficult to find anyone who is really anxious to place an order. Generally speaking, there has been little or no improvement in prices since the publication of our last issue. At the present level there can be little profit for anybody. Despite these considerations, however, it is felt that better conditions are in store, and manufacturers are waiting philosophically. The introduction of the tariff bill in the United States Congress will lead to little change in conditions in Ontario until it has been extensively discussed and the air has been cleared as to what the real effect will be. There is a feeling of relief, however, now that it has been settled that some kind of reduction will be made. Conditions should become more settled. Manufacturers, however, do not look for any increase in trade immediately as a result of the proposed change. In the Ottawa Valley trade, an impetus has been given by the recent sale of some three or four million feet of red pine, which brought in the neighborhood of \$19 per thousand. This is almost as good a price as that obtained in 1907, and is quite as good as the price obtained in 1908. Generally speaking, however, trade in the Ottawa Valley is quiet. Manufacturers are maintaining prices, although it is claimed by some export dealers that they are asking too much. It is probable that a number of large deals will be put through in a few days and it is asserted that purchasers will find the market generally strong.

Eastern Canada.

The optimistic outlook which is generally taken in business circles throughout the country is reflected in Eastern Canada, and lumber trade conditions are becoming firmer. In the amount of lumber gotten out this winter, the expectations of the lumbermen last fall have been fully realized at St. John. While there is little activity in local manufacturing circles at this port, it is certain that there will be a much larger volume of trade this year than last. There is no indication of more than an average season in American deals, there being at present less than 1,000,000 feet in stock at St. John. Recent consignments of spruce to Great Britain met with a good consumptive demand and very little has been put to stock there. The stocks at Liverpool and Manchester are being gradually worked down and better prices are anticipated. There is an upward tendency in yellow pine. A new schedule of prices has been agreed upon for the lower grades of cedar shingles, \$2.20 being established for "2nd clears," and \$1.20 for "Extra No. 1's." There is a better tone in the New York markets for spruce now than there has been for some time. New York wholesalers report that trade is improving, especially in the short spruce line, for which the stocks are rather light. Dealers in Boston are expecting a steady improvement. Prices have risen by at least \$1 a thousand within the last fortnight, although frames 9-inch and under may be had at \$25. With brighter conditions prevalent elsewhere, in both the home and foreign markets, and with the certainty of a good building season, continued improvement may be anticipated.

Western Canada.

While there is no marked feature in the western lumber trade there is an underlying current of recovery and a general anticipation for a good season. Manufacturers anticipate a big spring demand and from indi-

cations on both sides of the line it would seem that their hopeful views are justified. A pretty good business is being done in shingles at \$1.85, a price which allows the manufacturer a fair profit. The demand for rough lumber is not heavy; \$11, the present quoted price, is not a paying one. In the low grades of lumber there is little doing. Short length lots have been picked up at \$9.50 and \$10, these, of course, being bargain figures for the buyers. There is a paucity of logs. What can be obtained cost from \$10 to \$12. Reports from the Kootenays and Cranbrook districts indicate satisfactory conditions and a likelihood of better prices for the manufactured product at an early date.

Great Britain.

The London softwood trade, though small in volume of late, has, during the last few weeks, not been entirely unsatisfactory, although everyone would like to see a radical improvement in the consumption. Prices, notwithstanding all the adverse circumstances, have been maintained, and the prices at auction, although still below the cost of new goods, have a steady tendency to improve. At the recent public auction by Churchill & Sim, 2nd Quebec spruce was slightly easier in price, bringing £10 5s. and £10. 4ths brought £9, and unsorted £9 10s. 1½ and 2x12, 1st Montreal yellow pine, sold for £22 5s. and 4ths 2x11 at £12 10s. 9-inch brought £11, and 6-inch to 8-inch £10 5s. to £10 15s. A few lots of very large Oregon pine sold poorly, one lot bringing 96s. and the others only 71s. Prime Oregon pine was sold at £13 to £12, according to size. There has been a lull in f.o.b. buying in London and trade generally is still dull, though a trifle improved. Prices, notwithstanding all adverse circumstances, have been moderate. It is said in many quarters that it is quite possible for a turn to occur very suddenly and statistics show that if this takes place importers will have to make heavy purchases, especially as there seems to be no room for doubt that the production in northern Europe will fill very many thousands of standards short of the quantity produced in Europe in former years. The reduction in the consumption in London of pine deals from the St. Lawrence during February was so great that some wholesalers reduced their prices, with the result that a little more business was done. Spruce prices were good throughout February. There is, however, very small demand at present. Liverpool reports are not bright. In spite of this, however, spruce is firm and in a stronger position than it has been for some time. 3-inch by 7-inch and 8-inch are selling readily at £8 to £8 2s. 6d. ex quay, but it is difficult to obtain 3-inch x 6-inch at anything less than 5s. reduction. This is a result of scarcity of supplies. There are no price changes to report from Manchester for stock goods, but for future shipments higher values are asked. There is no business going on in future shipments of spruce. Slating battens and similar sizes are scarce at prices about 15s. per standard higher than those of six months ago. 2x5½-inch is especially scarce. At Glasgow a dull tone continues, the demand being only triling and fluctuating. The depreciation applies to practically all descriptions of wood goods, even spruce.

United States.

It is expected that the presentation of the report of the Ways and Means Committee to the House of Representatives at Washington will bring about a much more satisfactory condition of affairs in the lumber markets of the United States. In Chicago the market is reported to be in a much more healthy condition. The building demand is increasing rapidly and large wholesalers assert that their business during January

and February has been greater than during similar months in any previous year. The country trade is also picking up at a fast rate. The most popular wood at present in Chicago is yellow pine, which is expected to advance in price shortly. Number one hemlock is scarce in Chicago and there is very little call for the lower grades. The demand for white pine is not so good as was expected. Number one strips, shop lumber, common and better are in good demand with a tendency to advance, as the result of small supplies. The active building season has not yet opened although a great number of permits have been issued. It is expected that when the building does commence, white pine will be in much better demand. There is a good demand for lath and several classes of stock are slightly broken, especially 4-foot number one. Hardwoods in Chicago are improving. Very little Chicago business is reported for fir although the enquiries are quite numerous. Prices are steady. There is a good demand for spruce in factory stock and prices are firm. There is only a moderate demand for red or white cedar shingles. Prices are not changed to any appreciable extent, although an advance is expected when building commences. Both hemlock and white pine are in good request at Chicago. The cooperage market at Chicago is stagnant. Dealers are carrying large stocks and prices are declining. At Buffalo, white pine trade is quiet, though a better condition is expected shortly. Enquiries are commencing to appear. Dealers in lower grades report increasing activity among the box factories

Market Correspondence

Ottawa Interested in Tariff Issue

Ottawa, March 27.—Owing to the large shipments of lumber from the Ottawa Valley to the United States, lumber manufacturers here are much concerned in the Payne Bill, introduced in Washington last week. The consensus of opinion is that the proposed reduction of the tariff on Canadian lumber from \$2 to \$1 would, for the present at least, benefit Americans more than Canadians. There is still some doubt here as to whether the terms of the new tariff measure would afford Canadians the full benefit of the \$1 reduction. There may be some complications arising out of the restrictions placed on the export of timber from the Crown lands of Ontario and also the preferential features of the American tariff bill.

Accepting that 50 per cent. would be cut off the American duty, Mr. Gordon C. Edwards, president of the Canadian Lumbermen's Association and manufacturer of some 75,000,000 feet of lumber per year, told the *Canada Lumberman* that the modification in duty might help to move the lower grades of lumber to the other side. At present the \$2 duty was keeping out the best lumber and pine culls, but he believed the tariff change might effect some improvement and bring the low grades of pine more into competition with similar production on the other side. As the Americans themselves would have to pay any duty they left on Canadian lumber, he said Canadians as a whole were not much concerned in what they were doing at the present time. Mr. Edwards, having recently returned from England, has a good grasp of the lumber situation in general and believes that the coming season should witness an improvement in trade for Canadian manufacturers, irrespective of any tariff change.

Mr. C. Jackson Booth, manager for J. R. Booth, the largest lumber manufacturer in the Ottawa valley, said the new tariff would probably increase his trade, but as a Canadian he would not like any policy that would bring depletion of Canadian forests. His lumber was all shipped f.o.b. Ottawa, and if the new tariff reduced the price the American consumers would be the gainers. He did not believe the pulp duty would be changed at all unless Ontario reciprocated by removing the prohibition against pulp logs leaving the country.

Mr. Peter Whelen, president of the Ottawa Board of Trade and Canadian manager of the Shepard & Morse Lumber Company, affirmed that during the present year the Americans would get the whole or at least 90 per cent. of the benefit of the tariff reduction. The cheap sorts of lumber in the Ottawa valley would naturally be affected most and with the tariff cut in two, Mr. Whelen said, American buyers would come over here more willingly. As the stocks of box lumber are heavy, however, the Canadian holders would sell at no advanced price. The only advantage would be a quickening in the trade. Thus the Americans stood to gain all at the present juncture. Later on the advantage would be felt by both countries. On that account he regarded the new tariff as a progressive movement.

Mr. C. C. Whitney, St. Anthony Lumber Company, is doubtful if the new tariff will ever get the sanction of Congress. He said there would be naturally a gain to the lumber industries by the proposed change. The Hull Lumber Company, through its managing director, Charles E. Read, believes any benefit from the new tariff will be divided equally between producers and consumers. The Export Lumber Company, of Ottawa, which handles a large portion of the Ottawa valley output

purchased from the mills, is in the peculiar position of being independent of any tariff change on the other side, because all its lumber is shipped in bond through the United States to purchasers in South America.

The lumber interests in Parliament are, as a rule, diffident about expressing an opinion on the new American tariff. Members who are interested in the industry believe it to be the part of wisdom to hold their own counsel until the reduction of duty shall have become an accomplished fact.

The trade continues quiet but there is no sign of a weakening in prices. Some of the exporters contend that the manufacturers are holding out for higher prices than the market in general warrants. They claim that there is an immense amount of unsold lumber which at this time in other years had been contracted for by the Americans. However, the mill owners are still optimistic and believe they will get rid of the output of 1909 at as good figures as were realized in recent years. In confirmation of this assertion the *Canada Lumberman* learned that a sale of three or four million feet of red pine had just been made here at about \$19 per thousand. The price is not below last year, and almost as good as was obtained for any of the cuts in the record year of 1907. The sale of this large cut of red pine has made the market buoyant in whatever quarters the news leaked out and some other big transactions are expected to take place within a few days. The manufacturers are confident enough about the coming season to prepare for the usual production in the mills. Although there may not be contracts closed for all the pine, they assert, that the buyers will find the market strong when they come to close bargains.

Logging Season Concluded in N. B.

St. John, N.B., March 27.—The past fortnight has been marked by what is practically the end of the logging season at all the principal logging centres of New Brunswick, and that section of Quebec through which flows the St. John River, and its branches. Except in the cases of a few contractors, the woodsmen have about finished hauling their logs to the brows, thus completing the portion of the work which has to do with the actual chopping and getting out of the logs, for which work the present season has been a remarkably favorable one, having been surpassed by few, if any, in this respect for many years. Speaking generally, local lumbermen have gotten out fully as much as they planned in the fall to do.

The next phase of the season's work will have to do with the stream driving of the logs, and this part of the industry is always at this time of the year uppermost in the minds of all who have to do with the manufacture or sale of logs, long and short lumber. The driving season is now rapidly drawing near and conditions bearing upon the stream-driving are already being eagerly considered by interested parties, the most deeply interested being, of course, those who own the manufacturing plants. So far the prospects for a good stream-driving season are very bright. The snow at the head waters of the rivers and along the branches ranges in depth from four to five feet. The snow is solid and has not been weakened by thaws to any important extent and when it starts to melt should, under ordinary conditions, cause a good freshet. There are few logs in the river at present as the river was driven clean in the spring of 1908 and there were practically no logs in the river at the time of freezing.

There is little activity in local manufacturing circles considering the lateness of the date. For reasons mentioned in previous letters, most of the mills will be late in starting, one of the chief reasons being a scarcity of spruce logs, which will, in a number of cases, prevent a resumption of operations until the first of the new logs come down river, which will be late in the month of May. Only three of the local mills are sawing at present writing and a fourth will begin operations next week.

A feature of the trade during the past fortnight has been the closing out of several lots of spruce deals to American buyers by north shore parties. The deals, although dutiable, are cut into sizes suitable for the American market and the purpose of the purchasers is to use them for the trade in the same manner as if they were non-dutiable goods. It has been learned that the price paid at the mills was in the vicinity of \$14 per thousand superficial feet.

The prospects for local output of "American" deals, while pointing to a considerably greater volume than that of last year—during which the sawing season was remarkably short—shows no indication of being above the average. Only light stocks of "American" deals were wintered at this port and trade in this line has been therefore of the lightest nature all through the winter. At present there is less than one million superficial feet of "American" deals in stock at this port and until the mills get under way shipments will be of the lightest nature.

A feature of the cedar shingle trade of the past week was the inauguration of an agreed schedule of prices on the low grades to the local jobbing trade. This schedule went into effect a few days ago and has been agreed to by all the local manufacturers. The figures named are \$2.20 for "2nd Clears" and \$1.20 for "Extra No. 1's." Only one shingle mill is running and any transactions made in "Extras" and "Clears" are entirely for future delivery.

The U. S. National Wholesalers' Annual Meeting.

The seventeenth annual meeting of the National Wholesale Lumber Dealers' Association of the United States, which was opened on March 2nd, was one of the best meetings the association has ever held. The retiring president, Mr. C. H. Prescott, Jr., opened the meeting with the usual formalities and in his address referred to a number of interesting matters. Referring to the year's trade, he said that it had been spent largely in meeting the uncertain conditions, disposing of surplus stock and in purchasing what was needed for early use. It had also been necessary to use the greatest care in extending credits as well as to be most persistent in following up collections. They had not therefore enjoyed the highest prosperity. Lumbermen generally had withstood the strain remarkably well and were well fortified for the readjustments which were necessary. They had now come to the conclusion that although improvement was certain it would be much more gradual than they anticipated a few months ago. The reports of the other officers showed that the association was progressing satisfactorily, doing much useful work for its members.

One of the interesting reports presented was that of the committee on trade relations, which said among other things, that it was only just and reasonable that the wholesale dealer, in his efforts to secure trade, should bear in mind that the retailer, with his investment, was a necessity to every progressive community and was able to handle the trade at home to a much better advantage and give much better services than the wholesaler, whose stock was located far from the point of consumption. It was wise business policy, therefore, on the part of the dealers not to seek the trade of a retail lumber dealer and at the same time the trade of those persons who were the retailers' natural customers.

The committee on marine insurance considered the question of the probable saving which might be expected by establishing mutual marine insurance companies for the great lakes and also for the coastwise trade. Dealing with the problem of mutual marine insurance for the great lakes the report said in its conclusion: "Saving in mind the failure of the Buffalo and Tonawanda lumbermen to accomplish their proposed cargo indemnity agreement, and that their insurance rates have been reduced 30 per cent., coupled with the reasonable probability of decreasing receipts of lumber in the future at lake ports, owing to the rapidly diminishing supply, we do not under present conditions feel warranted in recommending to our members that any effort be made toward the formation of a mutual marine insurance company covering lumber in transit on the Great Lakes."

A consideration of the question of mutual insurance companies with coastwise marine insurance also lead the committee to recommend that no effort be made to form a mutual marine insurance company for this class of business.

The subject of trade ethics was discussed and the report of the conference at Minneapolis in June, 1908, was taken up. This report contained a draft code of ethics which became a subject of general discussion. The code was finally adopted with a recommendation that within a reasonable time the American Lumber Trade Congress which produced it should reconvene and revise the code in the light of experience.

The following new trustees were appointed: R. D. Baker, Pittsburg; Gordon C. Edwards, Ottawa; F. W. Cole, New York City; R. H. Edmond, New Orleans; F. E. Parker, Saginaw; R. W. Higbie, New York City; Horton Corwin, Edonton, N.C.

A banquet was held during the meeting at which the attendance was very large. The retiring president, Mr. Charles H. Prescott, Jr., acted as toastmaster. An interesting event during the meeting was the sending of a message of congratulation to Hon. Charles Marcil, Speaker of the Canadian House of Commons, congratulating him upon his appointment to this position of high honor.

Mr. Marcil had the honor on a previous occasion of addressing the National Wholesalers at one of their meetings. The election of officers took place immediately after the conclusion of the general meeting, the office holders being selected by the Board of Trustees as follows: President, George F. Craig, George F. Craig & Company, Philadelphia; 1st Vice-President, Robert W. Higbie, Robert W. Higbie Company, New York; 2nd Vice-President, F. R. Babcock, E. V. Babcock & Company, Pittsburg; Treasurer, Frederick W. Cole, New York; Secretary, E. F. Perry, New York.

Business and Trade Notes.

The Dodge Manufacturing Company, Toronto and Montreal, have issued a large and well illustrated catalogue of their sprocket wheels and chains. The catalogue will prove interesting to all users of power.

The Northern Electric & Manufacturing Company, Limited, have been awarded the contract for supplying and installing a Western Electric alternator, exciter and switchboard equipment for the town of Iberville, Que.

The B. Greening Wire Company, Limited, Hamilton and Montreal, are installing electric welding machinery in their works for the more economical welding of iron frames for their wire door mats, wire guards, tellers' cages, etc., and for the wire chain fittings, and the welding of wire generally.

Wm. E. Hill & Company, Kalamazoo, Mich., manufacturers of general sawmill machinery and special log and wood cutting and handling machinery, have just brought out one of the most complete and up-to-date catalogues ever issued on these lines. It contains 244 pages and for convenience in reference is divided into six sections. Section I. illustrates and describes such machines as are generally used on the sawing floor of a sawmill, such as log deck machinery, steam niggers, steam kickers and stops, band mills, circular mills, carriages, live rolls steam trips, edgers, trimmers, slashers, jump saws, and all kindred appliances. Section II. illustrates log jacks, car haul-up rigs, conveyor drives, spiked concave rolls, skid lifters, transfer rigs, lumber sorters and conveyors, steel towers and refuse conveyors, steel pans, conveyor chains, sprockets and attachments and general transmission. Section III. illustrates log, board and wood cutting and splitting machinery, consisting of circular cut-off machines, drag saws, circular splitters, bolters, short log mills, wood slashers, steam dogs and steam splitters. Section IV. illustrates complete line of lath machinery. Section V., complete line of filing room machinery. Section VI. illustrates engines, horizontal and vertical, automatic and throttling governor engines. If interested in this catalogue, a copy will be mailed to anyone who sends name and address to Wm. E. Hill & Company, Kalamazoo, Mich., and mentions the *Canada Lumberman*.

A "New Ontario" Lumbermen's Association.

The New Ontario Lumbermen's Association was recently formed at a convention of lumbermen, which was held at Fort William. One of the first steps of the new organization was to frame a petition to the Government, asking that the policy of issuing permits be continued. It was the opinion of the lumbermen that selling timber limits by tender would result in the most productive country being taken up by corporations. Officers of the association were elected as follows: President, E. L. Clark, Port Arthur; 1st Vice-President, George Lockheart, Fort Francis; 2nd Vice-President, H. H. Wood, Atikokan; Secretary, Charles McKinnon.

A strong delegation will be sent to the Provincial Legislature at Toronto to advocate several reforms decided upon.

EDGINGS

Ontario

The Tallman Brass & Metal Company, Hamilton, Ont., contemplate erecting a new foundry this spring. They will increase the Babbitt department to more than three times its present size.

Welland, Ont., has secured another industry and work will commence at once upon the erection of a factory for box making, etc., The principals of the company are W. J. Hickey and J. H. Lavallee.

It is stated that George White & Sons, of London, Ont., manufacturers of farm implements and machinery, will erect a large warehouse at Brandon, starting construction as soon as the season opens up.

The McLeod Pulp & Paper Mills have started to make box board at Milton, Ont., and intend to manufacture paper in the near future. The pulp mills of the company are busy and are turning out about 80 tons of pulp a day.

J. A. McBurne is preparing to open an office in Buffalo, through which he will dispose of the cut of his two mills at Earlton and Carlton, Ont., where it is said that about 10,000,000 feet of white pine will be cut this spring.

A. Weston & Son, lumber dealers of North Tonawanda, N.Y., have sold the steamer "A. Weston" to the Conger Coal Company, of Toronto. The "Weston" was brought out by the North Tonawanda firm and operated in the lumber trade on the lakes for many years.

Mr. James A. White, of the W. H. White Company, returned to Buffalo from a short trip to Toronto recently and reported a good revival in business in Ontario. Mr. White says that within the previous week or ten days trade conditions in Canada have improved very much.

Recent Ontario incorporations include: Siemon Company, Limited, Toronto, Ont., lumber manufacturers, capital \$1,000,000, incorporators, J. C. Siemon, W. R. Tudhope and Ralph H. Fillmore, all of Toronto, and J. Siemon, Jr., and Andrew Siemon, both of Warton, Ont.; Western Dry Dock and Shipbuilding Company, Limited, Toronto, Ont., incorporated, capital \$1,000,000, incorporators, J. H. Spence, C. E. H. Freeman and A. Singer, all of Toronto.

Reports from Ottawa indicate that the lumber output of Canada decreased in 1908. Ottawa Valley mills put out 503,000,000 feet, against 532,000,000 in 1907; Georgian Bay District, 704,072,000, against 775,523,000 feet the year before. British Columbia mills had early in 1908 190,000,000 feet of sawn lumber, and 190,000,000 feet of logs, to which 100,000,000 were added in the year, and Quebec's total shipments in 1908 were 214,000,000 feet, compared with 262,000,000 in 1907.

The first report of the condition of the Great Lakes following the winter shows that throughout the Great Lakes there is much less ice than usual, Lake Ontario, according to the report, being almost free from floating ice fields. General conditions as reported favor an early opening of navigation and unless a severe cold spell sets in, the harbor and river ice is expected to go out within a few weeks. In the eastern and southern sections of the Great Lakes region the ice is already reported as "rotting" and its going is expected to be without incident.

T. W. McGarry, M.P.P., will introduce a bill in the Ontario Legislature to simplify the legal procedure for the collection of wages due men employed in lumber camps. By the provisions of Mr. McGarry's amendment suit for unsatisfied claims may be brought in the Division Court of the district where the man is engaged, instead of, as at present, in the place where he works at the time of entering suit. At present it is claimed that American firms engage men, and send them into the woods. In the event of their docking their wages, witnesses have to be brought a long distance to the point where the man is working before the suit can be tried, involving great expense. Under Mr. McGarry's amendment, the suit may be tried at the point where he was taken in.

A despatch from Detroit says that the owners and managers of fifty of the largest lumber-carrying vessels on the Great Lakes have agreed to sell their boats to a corporation now in process of formation, which will own and operate 50 to 60 per cent. of the lumber-carriers of the lakes. Many prominent members of the Lumber Carriers' Association have been in Detroit for two weeks, and preliminary arrangements for the organization of the corporation were completed at a two-days' conference. The value of the fifty vessels to be purchased at once has been mutually agreed upon as approximately \$850,000. The new corporation will probably be capitalized at \$1,000,000, but the name of the new concern, its capitalization, and the selection of directors, will be matters to be brought up at a meeting to be held probably in Detroit. It is said that the Hines and Blogett fleets, which figure prominently in the project, move 200,000,000 feet of timber in an average season. The consolidation of interests is expected to effect a considerable saving in insurance charges and expenses of management.

Eastern Provinces

At a recent meeting of the Farmers' and Dairymen's Association of Fredericton, N.B., a strong resolution was unanimously adopted calling for an export duty on pulpwood.

According to news from Hull, Que., about 1,400 carloads of logs have been delivered at J. R. Booth's mill for early manufacture, and he expects to bring about 500 more. This is the chief activity in railway shipment of lumber, but the local managers of railways figure on brisk trade beginning about the middle of March, when sawn pine will be wanted on the other side.

A Hull correspondent states that extensive preparation has been made for the spring drive. The Upper Ottawa Improvement Company has completed a series of booms for storing logs cut along the Ottawa and its tributaries. As many do not drive their logs direct to mill, the necessity for storage places in the bays has been keenly felt. To meet these requirements bonds for \$80,000 were authorized at a recent meeting of the Improvement Company to establish the new works. A steel tug for towing the drive is also being constructed for Chats Lake. Reports from the upper Ottawa indicate an excellent season for drives. The snowfall, which in Hull aggregated seven feet for the winter, was equally heavy at Temiskaming. Hauling of logs is being completed on the Rouge Dumoines, Madawaska, Montreal and Black rivers.

It was definitely announced at Fredericton, N.B., recently, that the sale of Gilman Bros. & Burden's lumber property at Pokiok, N.B., to an American

syndicate had been consummated. The new purchasers have taken possession. J. T. Giles, of Ellsworth, Me., has gone to Pokiok to take over the management of the property and he and Dr. Alex Haggarty and Dr. Rufus Haggarty, also of Ellsworth, are the purchasers. The property consists of 118,000 acres of timberland as well as a rotary sawmill with lath machines and a modern equipment, wood working factory, upward of half a dozen dwellings, farm, water power, etc. The purchase price of \$40,000 does not include the lumber cut this winter, on which the purchasers have secured an option. It is announced that Mr. Giles and his associates will operate the mill themselves, but it is also said they may resell.

Western Canada

The Fairview Cedar Lumber Company's sawmill at Vancouver, owned by John Hanbury, Brandon, Man., was recently destroyed by fire at a loss of \$5,000.

The proposed conference of lumber and sawmill men with dealers of the prairie provinces, called for Calgary, April 15th, has been indefinitely postponed on account of the coast members being unable to attend.

The Canadian Industrial Company, of Vancouver, B.C., will erect a large paper and pulp mill on a site on the Powell River. The plans are being prepared by Mr. A. Carmichael, hydraulic engineer and contractor.

The Grand Trunk Pacific will go ahead on its construction work in the northern part of the Province of British Columbia this year, and has just taken tenders for 300,000 cross and switch ties and 4,000 telegraph poles. These are for the first 100-mile section from Prince Rupert eastward.

One hundred and forty thousand acres of timber land have been disposed of by an English syndicate to Vancouver capitalists for a figure in the vicinity of \$800,000. Plans are out for the erection of pulpwood and sawmills on this property, which is situated on the east coast of Vancouver Island, 100 miles north of Nanaimo.

An indication of the gradual improvement of the lumber business is the starting again of the Pacific Coast Lumber Mills, one of the largest plants in Vancouver. The mill has been shut down for several months, and during that time has fallen back on its stock. This is also about depleted. "If conditions were not better, we would not be starting so soon," was the remark of G. F. Gibson, manager. There has been a rumor that this mill had changed hands, but Mr. Gibson states there is absolutely no foundation for such a story.

The organization of the Michigan-Pacific Lumber Company, which owns nearly 33,000 acres of timber land in Vancouver, B.C., has been perfected. The company has been capitalized at \$1,500,000, and will begin operations in its holdings at once. The estimated stumpage of the property is 2,580,000,000 feet, a large percentage being hardwood. Following are the officers: President, Chas. W. Liken, Sebewaing; Vice-President, John H. Moore, Seattle, Wash.; Secretary, Wm. F. McKnight, Grand Rapids; Treasurer, Chas. A. Phelps, Grand Rapids; Directors, the foregoing and Chas. P. Moore, W. T. Coleman and S. M. Cochran, all of Seattle; Wm. L. Carpenter, Detroit, and E. B. Caldwell, of New York City.

A Vancouver correspondent states that the long expected improvements at dredge known as the "Fruhling," purchased by the Dominion Government, having arrived recently at Victoria, from Germany. The cost of the dredge was \$250,000, and it is intended to deepen the Fraser River channel to a depth of 30 feet between New Westminster and the gulf. The authorities consulted state that it will take a very short time for this dredge, which has an hourly capacity of 2,000 yards, to give a 30-foot channel from Westminster to the ocean. This improvement will prove a decided boon to all the mills along the Fraser River, especially to the Fraser River Lumber Company, the bulk of whose output is intended for the cargo trade.

J. S. Larke, Canadian trade commissioner in Australia, reports that the Oregon timber investigation by the Premier of New Zealand will not affect Canadian trade. Following complaints of New Zealand saw millers, respecting importation of Oregon timber, a royal commission was appointed. The trade agent states that the grievance is likely to be removed by increased prices for this timber at the British Columbia and United States saw mills. The Canadian Government's agent in Norway states that all the saw mills but one in Frederikstad are closed for want of logs, due to the log sorter's strike last summer. Partly owing to scarcity of battens and bad trade the planing mills are only run day shift. Work is so scarce that employees in one mill work alternate days.

The first general meeting of the British Canadian Wood Pulp and Paper Company, Limited, was recently held in Vancouver, B.C. The property and assets of the company amount to \$232,056, and the total outstanding stock, including options sold by Greely Kolts, the fiscal agent, to approximately \$280,000. The machinery and buildings represent an expenditure of \$133,662. S. G. Faulkner, the president, said the company had its splendid plant almost ready for operation, and they would start with a working capital of approximately \$100,000. P. M. Hamlin, the manager, states that in all probability a good start will not be made before the end of July. Unfortunately the company has no water power to depend upon, and for its supplies of wood it must buy in the open market. Mr. Stanley, one of the directors, put forward a proposal at one time to use refuse slabs from the sawmills, but for news such material would be hardly suitable, although it may be utilized in the manufacture of some kind of brown in which specks would not be regarded as an objectionable feature.

The Western Canada Wood Pulp & Paper Company, Limited, has just been incorporated with a capital of 750,000 7 per cent. preference shares of \$1 each and 750,000 ordinary shares of \$1 each, to build mills at Quatsino Sound, Vancouver Island, for the manufacture of wood pulp, news, building paper, box board and a general line of wrapping paper. The directors are local men, the engineer and architect being Charles B. Pride, of Appleton, Wis., and the secretary Arthur H. Harman, with head offices at 638 View street, Victoria, B.C. The company has acquired 55,669 acres of pulp limits, the annual rental being \$12.80 per section, instead of \$140 as provided under the ordinary timber license. The company has also been granted the right to cut wood at 15 cents per cord stumpage for ten years, instead of 25 cents under a timber license. It is the intention to erect a most modern and up-to-date paper mill. It is claimed that nowhere can news and wrapping paper be manufactured so cheaply as in British Columbia, owing to the large supply of cheap wood and abundance of water power, and low water freights to every important part of the world. Trade with English and Oriental markets will be cultivated. The prospects of this company are locally considered to be excellent if properly financed and under good management.

Does a saving of from 25 to 50 per cent of your power cost interest you?

Mr. Manufacturer:—

You know that your one best step towards greater profits is reduction in cost of production.

You also know that one of the big items of cost is power—perhaps the biggest.

Now wouldn't it interest you—wouldn't it mean money in your pocket—if you could save from a quarter to one half of what your power is costing you to-day?

Now it is just that saving we wish to tell you of. Even though your plant is equipped much above the average, it is to your interest to know about this still better system.

We want to give you all the facts about Western Electric Induction Motors and prove to you conclusively what saving in dollars and cents and what increase in efficiency that system of power will effect in your plant.

Look your plant over and figure out how many tons of metal you keep rotating over the heads of your workmen and how many square feet of belting you keep travelling at express train speed.

It takes power to keep that mass of non-productive machinery moving. Power that costs you money and adds nothing to the production of your plant.

Twenty-five to fifty per cent of power developed by your engine is lost by the line shaft and belt transmission system.

This fact has been repeatedly proven by actual tests.

You can save this loss—add it to your profits by installing Western Electric Induction Motors.

They can be mounted on the floor, wall or ceiling as required, or on the machines which they are to operate, thus eliminating all belts and hangers.

Western Electric Induction Motors are the simplest of all electrical machines. In operation they are as simple as a shaft rotating in its bearings and require no attention beyond that given to bearings.

The individual motor driven machines form compact units in themselves, thus allowing the workmen to get around them better and do better work. Besides this you pay only for the power used in actual production—only the machines which are actually employed in turning out your product need be kept running.

Western Electric Induction Motors are the result of 30 years of untiring efforts at improvement. That the Western Electric Company have produced \$230,000,000 worth of electrical apparatus during the last five years is a significant fact that speaks volumes for the efficiency of their apparatus.

These are but a few of the facts about Western Electric Induction Motors. If you are interested in increasing the efficiency of your plant—if you are interested in cutting down the cost of your power—write to-day for Bulletin No. 507.

We would be glad to have our engineers look over your plant and prove to you by actual figures what a saving you can effect by installing Western Electric Motors. This service is absolutely free and puts you under no obligation to us.

Write to-day for Bulletin No. 507 and full particulars.

MANUFACTURERS OF QUALITY LUMBER AND SHINGLES

The Way of the Transgressor

is hard, and there's all kinds of transgressors. If one transgresses the law of equilibrium and falls down stairs backwards at 2 a.m. he is apt to touchingly murmur, "Heaven pity the men at sea on a night like this." Or as the Aquarium is knocked over in the Hall, the flapping of the gentle gold fish on the Persian rug brings forth the remark, "that things are going from bad to worse in this house." And so you can go all along the line of transgression and when you come down to business the results are different only in degree. The man that transgresses the principle that his customer wants the best lumber he can get will soon find things going from bad to worse in his house. That's the reason why we are manufacturing our No. 2 Quebec Spruce and New Brunswick White Cedar Shingles of the best quality and manufacture, for the most critical yard trade. We do not claim that our timber is grown to order, but we do claim that for manufacture, grade and general quality, our products are the best that money can produce or buy, and that they are articles of stock which will keep and increase your trade.

No. 2 Quebec Spruce Shingles

The Celebrated Patented

Dunbar Shingle Machine

Having been manufacturing this machine for over 25 years and having added improvements from time to time, we are now in an excellent position to put on the market a thoroughly up-to-date Shingle Machine which gives every reasonable satisfaction.

Two excellent features of this machine are its Durability and Compactness, for which it has a reputation. Repairs, which cost time and money, are scarcely ever required, thus adding another good quality to our machine, namely ECONOMY. Made of A1 material by A1 workmen, it will do more work and better work in any country than any other shingle machine at present manufactured. Hot boxes are eliminated by means of Ring Oilers; this is an important consideration. The most prominent lumber concerns use our shingle machine and consider it the leader. There must be a reason. We also make a machine similar to above which can be adjusted to cut box-wood as well as shingles from 14 in. to 22 in. in length. Shingle Mill Machinery and Castings of all descriptions.

WHAT USERS SAY:

GEO. F. PARKER, Buckingham, P.Q.

Am at present working on a two million contract of bone-dry cedar and without the aid of your shingle machine this stock could not be manufactured at a profit.

HOWARD & CRAIG of Sherbrooke, P.Q.

It has given us the very best of satisfaction. We are much pleased with the machine in every way and nothing better could be desired.

Join the band of satisfied users of the Dunbar Shingle Machine and you will never regret it.

DeLoach "Prince" Hand Feed Shingle Mill

JOHN H. CRANE
Manufacturer of Lumber and Shingles

DELOACH MILL MFG. CO.,
BRIDGEPORT, ALA.

MONTEREY, ALA., JULY 2, 1907.

GENTLEMEN,—I purchased from you in 1905 a "Prince" hand feed shingle machine. I have operated it and find it all you claim for it. We cut at the rate of 30,000 shingles in 10 hours and made first class shingles. I consider your machine a very light running machine. If I wanted another hand machine I would certainly buy a DeLoach Prince.

With best wishes for your success, I am

Yours very truly,
JOHN H. CRANE.

Send for Catalogue of Engines, Boilers, Gasoline Engines, Saw Mills, Shingle Mills, Planers, Gang Edgers, Lath Mills, Grinding Mills, Water Wheels, Etc. Complete Circular and Band Mill Equipment.

Georgian Bay Engineering Works

P. O. BOX 425

Midland - Ontario

The Old Reliable Gordon Hollow Blast Grate

"The Grate with the Reputation"

No experiment. On the market since 1890. Over 6,000 sets in daily use. Over 600 voluntary testimonials.

BURNS WET, GREEN OR FROZEN SAWDUST,
giving as good results with them as a draft grate gives with dry wood.

ADDS FROM 25% TO 50%
TO THE EFFICIENCY OF A BOILER.
Saves labor in firing.

Lasts forever. Only expense first cost.

Equally efficient in ordinary furnaces or Dutch ovens.—Adapted for any number of boilers, from one up.—No change in construction necessary. A hole must be made through each wall, for the pipe; aside from this, not a brick need be disturbed.—The largest outfit can be installed between quitting time Saturday and starting up time Monday morning.—No difficulty about maintaining a fire at night, when the blower is idle, and no objection to so doing.

SOLD ON APPROVAL
subject to thirty days' exhaustive trial. WE pay the freight BOTH
WAYS in case of rejection.

SAMPLE TESTIMONIAL:

"We have seventeen boilers equipped with your hollow blast grate outfit, and they are all giving perfect satisfaction. We burn green oak and gum sawdust and are never troubled with 'low steam'. As you are no doubt aware, green gum sawdust is considered the hardest kind of fuel to burn, but with your grates we can burn it with good success." LAMB-FISH LUMBER CO., Charleston, Miss.

Gordon Hollow Blast Grate Company
Greenville - Michigan

"THE DUNBAR"

New and Improved

STEAM LOGGING ENGINES

This is the machine for which we claim all the good Qualities possessed by any other and a great many valuable improvements besides.

Best on the Market

This time we wish to call your attention to one of many important points which prove conclusively the superiority of the **Dunbar Logging Engines**: that of the Hydraulic Apparatus for raising and lowering the Boiler, an invention of our Mr. Dunbar, Sr. (for which patents are pending). By this device all danger from rush of water to either end of the Boiler, caused by irregularities of the road, is avoided. One of the most serious drawbacks in other Engines is the fact that the Boiler is stationary on the frame, consequently a source of great anxiety because of the danger to both the Crown Sheet and the Tubes. You can readily understand that in going up or down hill either the Crown Sheet or the Tubes are bared, causing them to become so heated that they will leak badly, and after repetition for a time the Boiler will be practically ruined.

This improvement, which supersedes our previous method for raising or lowering the boiler, has been added since cut herewith shown was made.

Should you contemplate putting in a Logging Engine we shall be glad to take the matter up with you and give you all particulars.

Quotations for Logging Sleds furnished.

Represented in the Province of Quebec by
Williams & Wilson
St. James St., MONTREAL

There are more DISSTON BRAND Band and Circular Saws used than any other make, and by a large majority.

WHY?

Because millmen and sawyers recognize by the use of the DISSTON SAWS they obtain the greatest results for the least cost.

WE MAKE THIS STATEMENT WITHOUT FEAR OF SUCCESSFUL CONTRADICTION.

POINTS OF MERIT

MATERIAL

FINEST
CRUCIBLE STEEL

UNIFORMITY.
TOUGHNESS.
GREATEST TENSILE STRENGTH AND ELASTICITY.

**HARDENING
AND
TEMPERING**

DISSTON
METHOD

Being Manufacturers of our own steel, and thoroughly familiar with its makeup, we are able to absolutely adjust the hardening and tempering processes to the degree giving that perfect combination of hardness and toughness that produces the "edge, tension-holding and standing up qualities" for which the DISSTON SAWS are renowned.

GRINDING

DISSTON
METHOD

By the DISSTON METHOD all Band Saws are ground perfectly flat and uniform in thickness, thus making possible a very close adjustment of the guides without creating any friction or heat when in operation at the highest rate of feed; and all Circular Saws, whether tapered or of even thickness, are perfectly flat ground on the surface, thus insuring in all saws perfect clearance and true balance.

TENSIONING

DISSTON
METHOD

The uniformity of the material, temper and grinding is a large factor in the proper adjustment of tension; and this, together with the Disston process of tensioning is the reason why the DISSTON SAWS will manufacture more lumber, under the same conditions, than any other brand of saw.

In the DISSTON BRAND of SAWS you have the advantages of the product of a progressive, up-to-date saw factory, the LARGEST IN THE WORLD, and where saws are made throughout, from the making of the steel itself—the superiority of which has been demonstrated for the past fifty-three years—to the finishing operation, and each process is performed by mechanics of long experience and highest order of skill.

No. 31 6-7 1/2 in.	320 lbs.	31.00

These Machines equipped with Electric Motors.

Prices on application.

Let us send you our new 1909 Catalog No. 6.

In designing this machine we have succeeded in making a number of important improvements over the ordinary hand sharpener, and have overcome many of the disadvantages experienced with the old-style machines. The movement of the emery wheel is perfectly perpendicular, and thus exactly centers the saw during the entire operation, and does not raise on a circle like the old-style hand gummers. Most filers will readily appreciate that this fact alone insures a better-ground tooth, and with less time and labour. The emery-wheel support is made in two parts, so that the wheel can be tilted, and thus a straight emery-wheel can be used to the same advantage as a concave, and this is also very useful in adjusting to secure any desired amount of hook. The emery-wheel arbor also is adjustable so as to secure a perfect center on all saws.

Our cross-head arrangement for handling the saw is another advantage of this machine, by which the heaviest saw can be easily and quickly picked up from the floor without the operator being obliged to lift the saw by hand. The saw can be placed on the cross-head and the cones adjusted while the saw rests on the floor, then by using the lever attached to the cross-bar, the saw is quickly lifted to the desired height and locked in position by a set screw in the cross-bar; with this lever and the cross-head screw, the saw is easily and quickly adjusted to any desired position. The wheel to which the cross-bar is attached is hung to swing in either direction to give any desired bevel on cut-off saws, and in whatever position it is placed for beveling, it always maintains the saw exactly under the center of the emery-wheel, and a graduated scale is provided to insure uniformity in setting for any desired bevel. A simple and practical throat adjuster also is provided at a convenient place, which makes all the teeth uniform in depth.

This machine is perfectly balanced, so that the raising and lowering of the emery-wheel is done with the greatest ease and precision. It has an exceptionally strong and rigid standard and a heavy solid base. All the parts are given the same care that is exercised in the manufacture of our highest-priced automatic sharpeners.

No. 12 R Sharpener and Gummer

The No. 12 R Hand Gummer is made the same as the No. 12 C described above, except that it does not have the adjustment for keeping the saw directly under the center of the emery-wheel while grinding a bevel on Cut-off saws, being designed more especially for rip saws.

This Saw Stands Without a Rival

AND IS THE

FASTEST CUTTING SAW IN THE WORLD!

Its Superiority consists in its Excellent Temper. It is made of "Razor Steel," which is the finest ever used in the manufacture of Saws. We have the sole control of this steel. It is tempered by our secret process, which process gives a keener cutting edge and a toughness to the steel which no other process can approach.

Maple Leaf Saw Set

MANUFACTURED BY

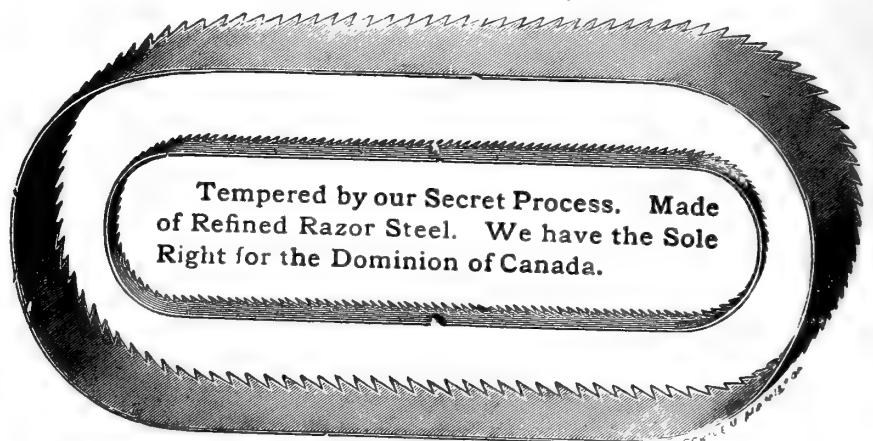

SHURLY & DIETRICH, Galt, Ont.

Directions.—Place the set on the point of tooth, as shown in the accompanying cut, and strike a very light blow with a tack hammer. If you require more set, file the tooth with more bevel.

If you follow directions you cannot make a mistake. Be sure and not strike too hard a blow, and it will set the hardest saw. On receipt of 40 cents we will send one by mail.

We are the only manufacturers in the world who export Saws in large quantities to the United States.

We Manufacture

HIGH GRADE BAND SAWS

Of All Widths and Lengths.

These Saws are made of Refined Razor Steel, and tempered by our Secret Process; for Fine Finish and Temper are not excelled.

A Suggestion — To the Trade!

We believe that the Lumber Trade in the Prairie Provinces and Ontario will make a mistake by not stocking up as heavily as possible with British Columbia Lumber and Shingles at present prices—which are **very low**: in fact lower prices with \$10.00 to \$11.00 logs, and \$5.00 to \$5.50 shingle bolts, are an impossibility.

A **word** to the **wise** should be sufficient. Send us your order.

We are Specialists on Lumber and Saw Mill INSURANCE

FOR OVER THIRTY YEARS we have made a close and constant study of this specialty, embracing not only "The Best Protection at the Minimum Cost" in the sense of Policies in the Strongest Companies at the lowest possible rates, but the enhanced Protection of such Policies so worded as to Insure you under whatever form of sale or undertaking you may make with your customers, unaware as you may be of the application of the Canadian Insurance Law in such instances.

We invite inquiry as to the above and our "ADVICE SHEET" system which we originated several years ago for the special convenience of our Lumber Customers.

We personally inspect each of the plants we insure at least twice a year.

TERMS OF SUBSCRIPTION:

Canada, United States and Great Britain, \$2.00 per Year, in advance; other foreign countries embraced in the General Postal Union, \$3.00.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Special care is taken to secure for publication the latest and most trustworthy market quotations throughout the world, so as to afford to the trade at home and abroad information on which it can rely in its operations.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Vol. 29

Toronto, April 15, 1909

No. 8

A Census of the Lumber Industry

The Forestry Branch of the Department of the Interior at Ottawa, is sending out to all sawmills and timber consumers in Canada a series of circulars for the purpose of obtaining information regarding the extent of the lumber industry. It is expected that the publication of the results of the enquiries will draw attention to the importance of the timber resources of Canada and will educate the public as to the necessity for supporting the Dominion and Provincial Forestry Departments. The circulars are of a fairly comprehensive nature. The information sought includes statements of the amount and value of lumber produced in 1908, covering each class of wood, and the quantity kiln dried, and surfaced; the quantity and value of the shingles and lath produced in 1908, of various classes of wood; the quantity and value of Canadian and imported timber used in the manufacture of agricultural implements and vehicles; the quantity and value of timber used in box manufacture; the quantity, value and kind of staves and heading used in the manufacture of tight cooperage, and the quantity and value of staves, heading and hoops used in the manufacture of slack cooperage.

Information of this nature when tabulated in complete form will prove of great value and interest to the lumber industry. Being compiled by the Forestry Branch, its purpose naturally will be to stimulate interest in the work of the branch and to awaken a public appreciation of the need for preserving our forest resources. It will be safe to predict, however, that the information will prove more interesting to manufacturers and dealers in lumber than to any others. It will show that the lumber industry of Canada is one of the country's greatest sources of wealth and if the figures obtained are made public in practical form they will result in a realization among other industries, of the fact, too often overlooked, that the welfare of Canada and of a great majority of the industries of

Canada, is dependent upon the life and development of the lumber industry. Governments have always been prone to look upon lumbering as a legitimate source for the creation of millionaires, and to overlook the fact that the rank and file of those engaged in lumbering are doing so at only a small living profit. When business conditions become stagnant, it is impossible for lumber firms to avoid a loss. They hold on, however, with the hope of better times to come. A business-like Government would see to it that the interests of the lumbering industry are carefully attended to. Fortunately the Canadian Governments to-day, both Federal and Provincial, are showing great activity in the study of lumber questions and many serious evils have been overcome in recent years. The prevention of the export of logs from Ontario is an instance of wise legislation. The proposed extension of the life of licenses in British Columbia is another.

There are other matters, however, which need immediate attention, and to which it is to be hoped attention will be drawn by the securing of the information which the Forestry Branch is undertaking. The competition of American lumber in the markets of Canada, in spite of the assertions sometimes heard to the contrary, is much too extensive. Southern pine finds a ready market in Ontario, to the disadvantage of Canadian white pine. The trouble has been aggravated at times by governments purchasing, or specifying, the American product for their public buildings. The export of pulpwood from Quebec is another matter which will bear the closest study, by the Government. The information to be secured by the Forestry Branch does not seem to go beyond the amount of lumber manufactured, and so will not be of any value in a study of the pulpwood situation. Something should be done in regard to this. If the Forestry Branch wishes to preserve Canadian resources and to assist in the development of Canadian industry it could assist greatly by securing statistics regarding the export of pulpwood, which is a valuable raw material for paper making. The price of pulpwood, received by the producer, is only a small fraction of the value to be obtained from the manufacture of the paper. So long as there is liberty to export pulpwood to the United States free of duty, it is natural to suppose that the mills already established in that country will continue to operate there and to discourage the establishment of competing mills in Canada. If an export duty were placed upon pulpwood the Americans, whose supply is running short, would soon be obliged to come to Canada, with their mills.

There are many other important matters which will have light cast upon them by the securing of statistical records of the production of the Canadian forests. The Forestry Branch is to be commended for taking up the work. Having made a beginning of this nature, it will be encouraged to further efforts, only by the measure of success in the present instance. Lumber manufacturers will be serving their own interests by supplying the information requested.

Suicidal Business Methods in B. C.

It would be hard to find in the annals of trade a parallel for the situation which exists to-day in the lumber business of British Columbia, and which has existed there during the greater part of the last two years. The lumber industry in that province is one of its most important sources of wealth and one of its largest fields for the employment of labor. The province possesses timber resources so extensive that they have not been properly estimated as yet and even those who claim to know the country well, vary greatly in their ideas as to the amount of standing timber. The world in general is growing more anxious about the supply of timber, as it is becoming scarce in the countries which hitherto have been supplying the demand.

In the face of this, and in spite of the fact that there are many splendidly equipped mills in British Columbia which are capable of turning out lumber at the minimum cost and according to the most modern methods of manufacture, there have been during the past two years such low prices, and the trade has been characterized by so much price-cutting, and throat-cutting in a business sense, that none have carried on business at a profit, while many have been operating at a loss.

The question naturally arises, who is to blame for this, and the natural answer of all those who are acquainted with the trade is, that those engaged in the manufacture and selling of lumber have themselves to blame, and themselves alone. When the market showed signs of

being overstocked and when at the same time a financial depression commenced to be felt throughout the business world, the price of lumber quickly fell. It is an easy matter now, to preach, when the conditions are so well understood, but without wishing to be considered as preaching, one may very properly call attention to the conditions which exist and to the remedies which are available. When prices commenced to sag it would have been the part of wisdom to consider the situation with the utmost care and to take every precaution against assisting prices in their downward course. Instead of doing this, the opposite method was adopted by many manufacturers and dealers. The tendency sprang up to look for trade at any price rather than allow the mills to remain idle or the stocks to accumulate. Business was done at a loss, rather than no business at all. Price-cutting became general and when a spirit of foolhardy competition once obtained a hold upon business, the downward path of prices—like the downward path of the evil-doer—was greased.

It is a good sign that most of the mill owners have at last realized, as a result of a prolonged bitter experience, what the situation exactly is. They will no longer accept business unless it can be obtained at a profit. Those who are willing to grab everything in sight—and there are still a few of them left—must either go out of business before long or have their eyes opened. Conditions are rapidly mending and there is good reason to hope that they will soon result in profitable prices prevailing once

more, and business methods replacing the folly which has been in evidence for so long.

A letter from a British Columbia correspondent, which was published in the previous issue, sums up the situation in forcible language. As the correspondent states, the question is not one of over-production, although it has been greatly aggravated by over-production accompanied by other mistaken methods. The great evil has been the desire to obtain business during a dull period by means of price-cutting. Price-cutting is a useless method of procedure in such a situation. The lumber business is one of the most difficult ones in which to affect the demand of the consumer. All the price-cutting in the world will not make a man buy a car-load of lumber if he does not see his way to dispose of it. In dull times people put off their use of lumber until affairs have picked up and are not so susceptible to the inducements of the price-cutter. Whatever business there is to be done in lumber during dull times could be just as well done at a fair price as at a ruinous one. Why then, do not those who are interested in the industry retain control? They have the power to do so and to decide to accept only prices which bring a reasonably fair profit. When the manufacturers and others interested in the lumber business of British Columbia have finally realized that this is the only way out of their present troubles, the end of these troubles will be in sight.

All Middlemen Not a Benefit to the Lumber Industry

Apropos of the matter of scalpers which was referred to editorially in a recent issue of the *Canada Lumberman*, there is another variety of lumber selling which has a very similar bad effect upon the lumber business. This is the intentional depression of prices by commission men who seek to increase their sales at the cost of receiving lower prices. The evil exists more in the United States than in Canada, but Canadian dealers frequently have to put up with it. The "Lumber World," of Chicago, deals with the matter as follows:

When demand is brisk and the mills have all the business that they can take care of, at good prices, the operations of a certain class of middlemen are not disagreeably apparent. When trade slackens and it is a difficult matter to get a price for lumber which will return a fair profit upon investment and manufacturing cost, the case is different. Reference is made to the irresponsible commission man. There are gentlemen selling lumber on commission in every big distributing centre in the country who are just as reputable and who give just as good service as does the regular lumber jobber, and to him this article does not apply at all. Unfortunately, however, a considerable number of commission men operate "for revenue only." They are not to be blamed in a way, but rather the system under which they work. When a man is selling lumber for \$5 a car, he is only following the dictates of human nature when he sells as many cars as he can. He gets \$5 for a car of yellow pine finish that he sells for \$27 a thousand and he gets \$5 if he sells that car for \$25 a thousand. If he can find a man who needs one car for which he is willing to pay \$27, but who would take two or three cars if he could get it for \$25 a thousand, the temptation to take the

order at the lower price and try to convince the mill man that that is the market price, is pretty strong. Instances are numerous where commission men have approached the buyer with a proposition something like this:

"I've got some pretty nice stock for sale that I think I can get you for \$2 less than you are paying So and So for it."

"What is the matter with it?"

"There is nothing the matter with it, it is just as good as the stock you are getting, and, if anything, better. You give me the order subject to that price and I think I can get it for you."

"All right. I will give you an order for five cars of that with the understanding that it is to be strictly up to grade."

The commission man sends the order down to the mill, representing it to have been taken at the prevailing market and advising its acceptance, and the mill man, probably a small operator, not being thoroughly in touch with conditions, accepts it.

The next man who approaches that particular buyer with the same kind of stock to sell is confronted with the cut price, and if enough of this kind of sales has been made, it is a very difficult matter to keep the market from declining.

It is a well known fact that selling on a declining market is much more difficult than when prices are staple or advancing. The buyer who believes that the market is going down is going to hold off in the hope of a still further decline, so that practices of the kind referred to not only cut down the profit margin of the mill men, but curtail their actual business.

Rapid Settlement of Prairies a Boon to B. C. Lumber Trade

That the lumber industry of British Columbia has reason to look forward to a time in the near future when the amount of its trade in the prairie provinces will be greatly increased is a general belief among the best informed of British Columbia lumbermen. The situation is well outlined in a recent issue of the Vancouver "Province," which says:

Not the least among the direct and immediate benefits to which this province may look with confidence through the rapid settlement of the great prairie stretches east of the mountains is continuous and increasing activity in its lumber industry. For some time past this industry has languished in British Columbia. Prices have fallen and large reserves have accumulated. The western provinces, which are the legitimate market for our product, have been invaded from without and made a slaughter ground by foreign manufacturers. The absence of Federal protection for the Canadian commodity has invited conditions

which have borne heavily on the producer here, and American railways accentuated the evil by lowering their rate to American millmen.

The comparative exhaustion of the timber wealth of the western States must of itself eliminate the competition which has heretofore existed. But even were this not so, the immense flow of population to the new provinces, the rapid production of wealth and the consequent enlarged demand for building material would create a market for our manufacture of which no competition or disabilities could rob us. British Columbia may look forward from this time on with reasonable assurance not only of such a market, but of a market which, through diminishing competition from other quarters will practically include the whole Canadian West.

And while our lumber interests are justified in looking forward to a market so extensive, there is every promise that the demand made from

the prairies during the present year will be such as to absorb the existing reserves and quicken the industry into an activity not known in the past. The interview which the "Province" published with Mr. John Hanbury, the well known sawmill owner of Brandon, Man., recently, on this subject is deserving of the careful attention of the public at large, as well as of those directly interested in the progress and prosperity of lumbering in British Columbia. Mr. Hanbury is eminently fitted to speak on the immediate and future prospects of the industry. He has practical knowledge of it as one largely engaged in the enterprise in this province, and he has intimate knowledge of the conditions which prevail in the prairie country, through a residence there extending over a quarter of a century. When he tells us, therefore, of the active demand for lumber in all sections of the middle west, he speaks from facts obtained as a business man engaged in the very enterprise to which he refers. When he foresees a continually expanding market, he assures us with authority that what we hope for will come to pass.

A revival of the lumber industry would, despite the prosperity which now exists everywhere in the province, be immediately felt. Our lumber is one of our great natural resources, and with reasonable prudence in the management of our forests the output may be regarded as inexhaustible. In supplying building material to the increasing population of the new provinces this enterprise will continue indefinitely to be a source of wealth to our people. With such a market for our lumber, our fish and our fruit, and with the Pacific as the profitable route for prairie export wheat, this province should be linked by indissoluble bonds of interest and prosperity to the great middle west of Canada.

Mr. Hanbury in the interview referred to said, among other things: "In all my 27 years' experience on the prairies I have never seen the demand for lumber so active. The demand for lumber on the prairies is general. At the present rate of consumption the visible supply will soon be absorbed, especially since so few plants are in operation. The visible supply in the various mountain mills is estimated at 180,000,000

feet, and on the coast the figures must be considerably larger, as I know one firm that has 20,000,000 feet piled in its yards.

"Our firm recently filled orders for fifteen large barns in the Brandon district. Orders are pouring in as fast as they can be filled, and what applies to that district applies to other sections of the prairie provinces. And better still, the farmers are paying spot cash for their lumber, an indication in itself that they are all in easy circumstances. With the influx of newcomers, now in progress, the demand will likely soon show a marked increase. This means only one thing. It will lead to the long-expected revival of the lumber industry, which has been languishing for several years. Another encouraging feature is the big demand of the railways for timber for various purposes. In some instances, on account of broken stocks and the close-down of the mills, some of these orders cannot be easily filled. I feel quite confident that while prices remain unchanged, an advance will come in due course."

In this connection, a recent despatch from Winnipeg said there are indications that there will shortly be an increase in the prices of lumber products in Canada, and especially in the West. In the face of prosperity in every line of trade, manufacturers of lumber, shingles and other wood products are curtailing their outputs, thus starving the market, and consequently creating decidedly high prices for lumber products. This applies more to the shingle industry than to lumber. It is reported from the Pacific coast that practically all the shingle mills in the State of Washington and the majority of those in British Columbia are closed and prices of fine shingles are likely to be as high as in 1907, while it is said that in the British Columbia mills it has been found a financial necessity to curtail the log cut. In the meantime Pacific coast export trade is increasing, railway companies are continuing construction and the demand from the prairie provinces is also growing. If the United States reduces the duty on Canadian lumber a still further impetus will be given, so that taking everything into consideration an advance at this moment is well warranted.

Freight Rates on Telegraph Poles Materially Lowered

The Board of Railway Commissioners have just handed down a decision in the application made some time ago by shippers of telegraph poles, protesting against paying a higher tariff on that commodity than was charged for transportation of other forest products. The judgment favors the lumbermen to such an extent that about 80 per cent. of cedar poles will in future be carried at a reduction of 25 per cent. in freight rates. The Rideau Lumber Company, of Ottawa, which, with John MacKenzie, of Ormsby, and J. A. Scobell, of Kingston, made complaint against the railway tariff, had to answer several arguments made by the Grand Trunk Railway and the Canadian Pacific Railway. The Rideau Lumber Company denied that there was any greater risk in carrying cedar poles than ties, posts and other lumber. In answer to the railways' contention that poles were more valuable, the Rideau Lumber Company said they were no more than equal to posts and ties, and not more than 75 per cent. of the value of lumber. Then the shippers of telegraph poles had to bear an additional sum, averaging \$2.75 per car, for staking and wiring cars of telegraph poles. The railway companies advanced that in the transportation of poles freight cars had to be sent empty after them at a loss compared with the carrying of other sorts of lumber. The reply to this was the bulk of cedar poles went from Canada to the United States and that the cars carrying them in nine cases out of ten, came from the other side, laden with coal. It was also denied that the poles were, to the extent alleged by the railways, difficult to handle on account of the length. The Rideau Lumber Company produced a statement concerning 135 cars of telegraph poles, of which 108 were single; 18 were double, and 9 were cases of three cars hitched together to carry poles of extreme length. This showed that the great majority of the poles could be handled the same as ordinary lumber. Computation of charges from different points of origination to places of destination showed that the rates on poles exceeded the tariff on other sorts of lumber all the way from 27 per cent. to 45½ per cent.

In the Railway Commission's order signed by Mr. Justice Mabee and Commissioners Scott and Maclean, the lumbermen get reversals of conditions except that railways are allowed something where extra cars are called into use. The order states: "That the tolls and minimum car

load weight charged by the railway companies, east of Port Arthur, on wooden telegraph, telephone and electric light and trolley poles, loaded on single cars be not greater than the tolls and minimum carload weight in the special tariffs of the companies to apply on common lumber; except that it shall not be obligatory on the company to charge such tolls thereon as may be made necessary by the competitions of carriers not subject to the Railway Act when such competitive tolls are lower than the lowest special tariff or tolls between the same points on common lumber issued under ordinary transportation and trade conditions.

"That with respect to poles too long for a single car, companies are authorized to charge not more than 20 per cent. higher and not more than 10th class rates, the minimum for the first car to be the same as described for single cars and for each additional car under which the load extends two-thirds of the single car minimum, the longest car in the series to be considered the first car.

"That in the computation of additional rates on long poles they be disposed of thus: 25 and under, nil; 26 to 75, one-half cent; 76 and over, one cent.

"That the order shall apply to shipments of poles from points in Canada to points in the United States between which points in Canada to points in the United States rail rates for general traffic are, or may be, made by the Canadian railway companies with concurrence of the United States connections; minimum weights to be made in accordance with rule 7 of the so-called official classification or as may be modified by the joint tariffs, if any, on lumber between the same points and the sixth class rates to be the maximum."

It will be a great advantage to the shippers of poles to have this matter finally decided in their favor. They have had many difficulties on account of it in the past. The heavy rates have been great drawbacks to the trade. Competition in the United States has been almost out of the question, while in Ontario, American dealers have been able to obtain trade which ought to go to Canadian firms. On the simple basis of fairness to the trade, they should have as favorable rates as those given to other lumber commodity shippers.

Freight Rate Case Receives a Hearing

Board of Railway Commissioners Take the Matter up at Ottawa—Increases Under New Schedule Made Subject for Complaint—Adjournment for Railways to Prepare Statement

After a hearing extending over a greater part of two days the application of the Canadian Lumbermen's Association before the Board of Railway Commissioners for an order disallowing the lumber tariffs of the Canadian Pacific, Grand Trunk, Canadian Northern (Quebec), and Canadian Northern (Ontario) railway companies, was on April 9th adjourned to be further heard on May 18th. Arguments and evidence pro and con were voluminous and it looked once as if the matter would revert into a hopeless tangle. The lumber interests, represented by Mr. Wallace Nesbitt, K.C., alleged an unjust and discriminating increase in the freight rates resulting from the amended tariffs of May last. Mr. G. F. Shepley, K.C., appeared for the railway companies and denied the charges of excessive freight rates. In addition to the high standing of the counsel engaged, the importance of the case was evidenced by the attendance of many of the prominent lumber manufacturers and shippers of Eastern Canada. Mr. Gordon C. Edwards attended as president of the Canadian Lumbermen's Association and for the W. C. Edwards Company; Mr. Walter Ross represented J. R. Booth interests; H. K. Egan appeared for the Hawkesbury Lumber Company, and George Dewar of the Export Lumber Company; J. S. Gillies, R. G. Cameron, treasurer of the Lumbermen's Association; F. W. Avery, J. C. Brown, J. W. Smith, D. J. Turner, Thomas Wilson, Hugh Maclean and W. Laidlaw were among the other lumbermen present. Messrs. W. H. Biggar and G. W. Beatty, solicitors, of Montreal, also acted as assistant counsel for the railways, while Mr. John F. Orde, K.C., of Ottawa, appeared with Mr. Nesbitt in the interests of the lumbermen. Chief Commissioner Mabee and Commissioners Maclean and Scott comprised the Board.

Introducing himself as representing practically the entire lumber shipping interests of Eastern Canada, Mr. Wallace Nesbitt proceeded to disclose what he termed the iniquity of the present tariff. The railways had introduced for the most part a system of "paper rates." They had in general reduced the rates from points where there was little carrying trade and increased it from points of brisk shipment. Although there had been more decreases than increases in point of number, yet in the aggregate a monetary advance of $9\frac{1}{2}$ per cent. had been effected.

Discrimination had also been rampant. As a glaring instance: eight cents was the rate from Byng Inlet to Buffalo, but for the same commodity from Parry Sound to Buffalo fourteen cents was the tariff in vogue. The effect was to make the sale of certain grades of lumber prohibitive at Parry Sound, whereas at Byng Inlet, the smaller port, they were merchantable with profit.

Mr. Frank Hawkins, secretary of the Canadian Lumbermen's Association, who had prepared the material for the appeal, when called for evidence produced a lengthy statistical return showing the excessive increase in rates by the Grand Trunk Railway as experienced by the chief lumbermen of the province. On the list appeared the name of J. R. Booth, Ottawa. Since May 1st last this firm had shipped by rail 231 cars at an excess rate under the new tariff of \$1,100. The W. C. Edwards Company, of Ottawa, shipped 359 cars at an excess of \$1,170. Similarly the Rockland mills of the Edwards Company paid \$3.10 excess on each of 230 cars and the Pembroke Lumber Company \$2.98 per car on 399 cars. The complete list showed that on a total of 14,710 cars, excess at the rate of \$2.48 a car had been charged.

Lumber ranked as a tenth rate commodity but in the Georgian Bay district the ton rate per mile had been increased in advance of all other commodities. Internal shipping from Montreal to Quebec and intervening points showed an increase of 71.20 per cent. Ottawa to Montreal export rate advanced from 4 cents to 5 cents, and from Ottawa to Toronto rates advanced from 10 to 11 cents.

The railways' defence was commenced by Mr. Shepley, on the second day of the case. He held the statement submitted by the lumber interests to be circumscribed and unfair. On the whole there had been no uniform or substantial increase of rates. What increases were made were within the terms of the statute and unless an affirmative attack were made to prove the whole table unjust, he held that the Board had no jurisdiction in the matter. What advances had been made were not unreasonable and the entire revision had been made with a view to effecting a better alignment of the tariff and eliminating a multitude of supplements.

At the conclusion of the legal argument Chief Commissioner Mabee suggested that in order to facilitate a settlement the railways should prepare a return showing the increase, if any, in the earning power of a lumber car from the 18 points of origin in Ontario to the main points of destination. This would be the only way to ascertain the effect of the new tariff.

Mr. John Pullen, chief freight agent of the Grand Trunk Railway, urged that the task of preparing such a return would prove almost endless and very expensive.

Judge Mabee—"The billing clerk of each station of shipment could readily prepare the information. If we can satisfy ourselves as to the effect of the new tariff, no matter what the individual rates, it will not take long to settle this dispute."

After proposing a few alternatives, Mr. Shepley decided to consult his clients on the point. The railway men then withdrew for consultation and on returning Mr. Shepley announced that they were ready to make an effort at once to obtain the information, and suggested an adjournment of the case until the June sitting of the Board. Mr. Nesbitt objected to so long a delay on the grounds that the best part of the 1909 trade would be moved under the high tariff before a change had been instituted. Judge Mabee pointed out that there would be a sitting for the hearing of traffic cases on the third Tuesday of May, the 18th, and suggested that adjournment be limited to that date.

Mr. Nesbitt then sought to have rates levied in the meantime to be paid under protest, but Judge Mabee held that the Board would have no jurisdiction to order a refund. He would not create a tangle by imposing conditions which might not prove reasonable when a final settlement was obtained. The adjournment was made, and each side agreed to furnish the other with the information it had gathered relating to the issue.

Tariff Bill Passes U. S. House of Representatives.

The Payne Tariff Bill, drafted by the Republican members of the Committee on Ways and Means, has been passed by the United States House of Representatives. It was expected at the time the bill was passed that the Senate would shortly take up the bill and it would soon be enacted and become law. As already reported, the bill makes a reduction of the duty on rough lumber from \$2 per thousand feet to \$1 per thousand feet. The duty on laths is reduced from 25 cents per thousand to $12\frac{1}{2}$ cents per thousand, and the duty on shingles from 20 per cent. to 10 per cent.

Representative Davis, of Minnesota, a Republican, met with defeat in the Committee of the Whole when he tried to have the maximum rates removed from rough lumber. The vote was 135 ayes and 194 nays. Chairman Payne protested against the assaults made on the maximum schedule of the tariff measure. The high rates included in the maximum schedules were necessary, he said, to prevent foreign countries from discriminating against the United States. He insisted that in the lumber statistics the maximum rates did not exceed the rates of the Dingley law.

After some discussion, a redraft of the maximum schedule was agreed to by which wood pulp is placed on the free list, and is not to have any maximum rates applied to it, and 20 per cent. is fixed as the maximum rate for steel bands for saws.

At a previous session the House of Representatives voted against placing lumber on the free list by a narrow margin of six votes. The vote was taken in Committee of the Whole during consideration of the Payne Tariff Bill for amendment. The only modification was the adoption of a committee amendment striking out the countervailing duty on lumber. The advocates of free lumber were led by Representative Tawney, of Minnesota, who offered an amendment to the lumber schedules removing certain classes of the lumber from the dutiable list as a preliminary move to transferring them to the free list. His motion was defeated by a vote of 170 yeas to 176 nays.

A New Liverpool Firm of Timber Merchants.

A new firm of wholesale timber merchants has been established in Liverpool, Eng., under the name of Lumley, Eames & Ross, with offices at Canada Dock Chambers, Regent Road, Bootle. The partners are Mr. Percival W. Lumley, who has been for some years with Duncan, Ewing & Company, in Liverpool and London; Mr. Arthur Eames and Mr. Walter G. Ross, who are well known as travellers in the district, having for some years been engaged in this capacity by the firm of Lumley, Lloyd & Company. Mr. Richard Lumley will have a seat in the office for his private business. For some years past Mr. Richard Lumley has been called upon as arbitrator in disputes in the timber trade, and now in his leisure time he will be able to devote a considerable portion of it in this direction. Mr. Tomlinson enters the service of Lumley, Lloyd & Company as a traveller, having had considerable experience with another firm in Liverpool; and Mr. Leech, son of Mr. Leech, of Manchester, also takes service in this firm.

Opening for Canadian Lumber in Cuba.

In a recent report to the U. S. Department of Commerce and Labor, Deputy Consul-General H. P. Starrett, of Habana, writes as follows:

Most houses of the better class in Cuba, as well as in nearly all Latin-American countries, are built of mortar, brick, stone, or cement blocks, but workmen's cottages, stables, outbuildings, and house finishings are made of imported lumber, no suitable building lumber being produced on the island. Yellow pine lumber is the largest item of this importation, with a small percentage of white pine and spruce. The annual importation of yellow and white pine amounts to about 150,000,000 feet, practically all of which comes from North America, about 80 per cent. coming from the United States, about 8 per cent. from Canada, and the remainder from Great Britain and the West Indies.

The present condition of the market is somewhat improved, and with the betterment of general business conditions and an excellent sugar crop, it is believed that this summer will see a great stride in building activities of all kinds throughout the island, with a corresponding increase in the importation of building materials, especially lumber and cement.

For the benefit of lumber exporters who may be interested in entering this market a detailed description of specifications and lumber market conditions is given below.

Nearly all lumber is bought in cargo lots of from 250M to 400M feet, quotations being c.i.f., on the three kinds imported—yellow pine, white pine and spruce.

Yellow pine comes almost entirely from American Gulf ports. There are two grades, first class, or what is known in the States as the "merchantable quality," and second class, about the same as the "merchantable quality," only being shorter in length and containing more sap and knots. Specifications for cargo lots usually run as follows: Two-thirds of cargo from 12 to 30 feet in length and one-third from 30 to 36 feet in length; 30 per cent. should be 10 and 12-inch stuff, 1 to 12 inches thick, and the balance from 2 by 2 inches to 8 by 8 inches. The market price in Habana for first class (merchantable quality) yellow pine is from \$21.50 to \$22, United States currency, per M, c.i.f., and for second class quality, from \$17 to \$18 per M, c.i.f.

The importations of white pine lumber amount to about 8,000,000 or 10,000,000 feet per year, most of which comes from Canada. It is stated that the Canadian quality is better in grade than the American product, although the price is about \$1.50 per M higher. Market requirements are for 1 by 8-inch to 1 by 12-inch stuff, from 12 to 16 feet in length. The market price in Habana for "West Indies shippers" quality being from \$34 to \$36 per M, c.i.f., and for "No. 7" quality from \$45 to \$50 per M c.i.f.

About 10,000,000 feet of spruce are imported each year, all coming from Nova Scotia. Market requirements are for 1 by 6-inch to 1 by 12-inch stuff, from 10 to 25 feet in length. There is only one grade imported, the price being from \$22 to \$24 per M, c.i.f. Terms of sale are usually sixty days' draft for 90 per cent. of the invoice against shipping documents, the remaining 10 per cent. being paid at the time of the discharge of the cargo, except in the case of white pine, when draft is usually given for sixty days for the full amount of the invoice, shipping documents attached. There is no duty on undressed, common pine lumber, but harbor dues amount to 20 cents per thousand feet and wharfage about 12 cents per thousand.

The usual method of lumber exporters upon entering this market is to select some good agent in Habana, who is well known to the trade, and who can handle the business for the entire island. It has been found by experience that buyers here do not care to purchase direct from the shipper, for the reason that the shipper is unknown to them, and they depend largely on the agent who is personally known to them. The current commission paid to such agents is 75 cents per thousand feet.

In conclusion, the writer wishes to state that in a few instances some rather sharp methods have been practiced by American lumber exporters with Spanish importers here, such as shipping second-class lumber for first-class, selling utterly worthless and unsalable stuff for second-class, and making short shipments. It is a pleasure to state, however, that such instances occur very rarely, and it is hoped that they will entirely cease in the near future.

Bulletin No. 3 of the Dominion forestry branch, issued under the authority of A. Knechtel, Inspector of forestry reserves, states that the aggregate area of all reserves is 16,312 $\frac{1}{4}$ miles, divided as follows: Manitoba (6 reserves), 3,575 $\frac{1}{4}$ square miles; Saskatchewan (4 reserves), 740 square miles; Alberta (6 reserves), 9,702 square miles; British Columbia (10 reserves), 2,295 square miles. The problem of forest fires according to the bulletin is more serious in the west than in the east, owing to the drier climate and the greater velocity of the winds. Grazing on the reserves is favored, as it assists in preventing and checking fires. Reforestation is being carried on, and experiments show that growth from the seed is the preferable method. The amount of merchantable timber on the six Manitoba reserves is estimated at 602,933,000 feet. The reserves, Mr. Knechtel states, are intended to preserve timber for the settlers and not for the lumber trade at large.

Glasgow's Lumber Business During 1908.

The Dominion Trade and Commerce bulletins in a report from Glasgow say:

Last year's importations in the timber trade of waney pine, oak and elm were on a very modest scale, but nevertheless they have up to the present served to meet the very contracted demand. The chief outlets for waney pine have been narrowed by the depression in the shipbuilding and textile machinery industries. Oak was abnormally dear in Quebec, but shippers have found this market took very little at the largely increased f.o.b. rates demanded by them. Elm threatens to become more scarce later on, owing to the small demand on this side having, as reported, made the shippers determine to cut no more this winter, and doubtless what was left over from last winter's cutting will be sufficient for the diminished demand for this wood.

On the whole, the market all round has been quiet, but prices for stocks here have held firm at old rates, although the Quebec shippers have been disappointed with the reduced demand for shipment to the United Kingdom, and probably made little, if any, profit on the cost of their shipments.

The market has been quiet, but generally firm during the last year, as imports have not been in excess of the needs on this side, and the wintered stocks are very moderate with the result that there has been no pressure to sell, and a modest profit should have been realizable by the merchant and yard keeper. The demand for British Columbia yellow pine fell off during last year, owing to the depressed general trade; but nevertheless, a revival in the Canadian demand during the closing months of the year caused f.o.b. prices to advance, and strengthened the values for stocks held on this side. The chief outlet for this useful timber has been general construction work, rather than for shipbuilding, which industry has been very restricted.

Like its predecessor, 1908 was a very unsatisfactory year to the timber trade generally. Supplies have been better adjusted to the restricted demand for all classes of wood, but competition has been so keen as to leave little margin for profit. Both landed stocks and forward commitments have been generally reduced to a level more soundly in accord with the restricted nature of the demand than has been customary, so that although the consequent growth of hand-to-mouth business meant extremely thin profits, this cautious policy gave little room for dangerous fluctuations in values, and resulted in a fairly sound condition of trade.

Small capitalists are being gradually squeezed out, owing to the want of a margin for a living profit; but on the other hand, sound small traders have found "cheap-money" help them to hold on in the hope of better times. The building trade has shown some slight signs of improvement, giving some hope to the softwood section of the market, but the bad state of the shipbuilding and rolling stock industries is very discouraging to the hardwood section of the market.

Quebec's White Pine Exports Decreasing.

A great decrease in the production and export of Quebec white pine is shown by the following table. The largest export since 1850, viz., 23,147,000 cubic feet, was in 1863, while as recently as 1883 it amounted to 10,447,000 cubic feet. The figures, in cubic feet, since 1898, are as follows:

Year	Supply			Export		Stocks		Total
	Square	Waney	Total	S. & waney	Square	Waney		
1898.....	1,062,000	1,903,000	2,965,000	3,015,000	1,354,000	2,452,000		3,806,000
1899.....	592,000	1,793,000	2,385,000	3,085,000	1,148,000	1,014,000		2,162,000
1900.....	571,000	1,505,000	2,076,000	2,755,000	805,000	506,000		1,311,000
1901.....	585,000	1,447,000	2,032,000	2,317,000	590,000	361,000		951,000
1902.....	384,000	1,830,000	2,214,000	2,445,000	396,000	261,000		657,000
1903.....	420,000	1,865,000	2,285,000	2,182,000	413,000	406,000		819,000
1904.....	240,000	2,256,000	2,496,000	1,492,000	347,000	1,269,000		1,616,000
1905.....	137,000	1,211,000	1,348,000	1,477,000	289,000	1,174,000		1,463,000
1906.....	76,720	676,600	753,320	1,857,600	81,375	267,356		348,731
1907.....	136,200	1,159,960	1,296,160	1,311,252	67,666	267,913		335,579
1908.....	132,560	1,060,880	1,193,440	1,098,779	50,776	372,681		423,457

Canadian Box-boards would sell well at Manchester.

Mr. P. B. MacNamara, Canadian Trade Commissioner at Manchester, Eng., in a recent report says: From time to time the attention of Canadian sawmill owners has been called to the very large market that exists here for box-boards of all sizes and quality, and it is satisfactory to know that Nova Scotia manufacturers are becoming alive to the situation and orders are being obtained. Complaints were made to this office by British importers that after considerable correspondence and after furnishing specifications and quantities with hopes held out that business would follow, none resulted. The price offered may not have been sufficiently tempting, for the British merchant (like all others) wants to buy at the very lowest prices, and he is aided therein by having, perhaps, greater opportunities of doing so than most others. Norway and Sweden are the chief sources of supply, and their proximity helps them materially in the matter of freight rates. It is hardly possible to give the quantity and value imported, but it reaches a very large amount.

THE BRITISH COLUMBIA TRADE

A Comparison of Interest to British Columbia.

An interesting comparison of trade conditions in the Canadian west and the United States west is afforded by two recent despatches.

One despatch is as follows: The Fraser River Lumber Mills, New Westminster, have orders for the delivery before September next of over 12,000,000 feet of lumber and timber. Of this amount, seven and a half million feet is for the Grand Trunk Pacific Railway. The Rhodes Curry Company, of Amherst, N.S., which firm constructs railway cars, has placed orders for one and a half million feet, while the Ottawa Car Company wants three-quarters of a million. Besides these large amounts, there are orders in hand from Regina and the territory west for 3,500,000 feet, exclusive of shingles and factory products. This company has not had a man in the field west of Regina, but with business opening up, Mr. C. Bruce has gone to establish an office in the capital of Saskatchewan. The Fraser River Lumber Mills are the largest on the Pacific coast, and run close to the world's record in size. One day recently they cut 343,000 feet. A notable feature in connection with its operations, is that, large as it is, Oriental labor is being dispensed with, and one day recently 133 Asiatics were replaced by white men.

The other despatch, which comes from Seattle, Wash., is as follows: Conditions in the retail lumber market are far from encouraging and a general close-down of all lumber mills in Western Washington is not at all improbable. Unless the volume of business shows a decided increase in the near future, the mills will cease operating or the output will be considerably curtailed. Six of the largest mills in the State of Washington, having a daily cutting capacity of 1,870,000 feet, already have closed down owing to the weakness of the market. The movement for an indefinite suspension of lumbering operations in the western section of the state is gaining much strength and 68 mills, in addition to the six which have already closed down, have signified their intention of remaining idle or greatly reducing their output in the very near future. In January the railways placed tremendous orders for northwestern lumber, but since that time, however, practically no business has been offering from the eastern buyers. To tariff legislation, the lumbermen place the responsibility for the depression. Unprecedented weather east of the Rocky Mountains is also having a depressing effect on the lumber orders for the east.

Sales representatives of northwest lumber mills have been scouring North and South Dakota, Colorado, Minnesota, Wisconsin, Iowa, Nebraska and other states, for many weeks, offering concessions to obtain business, but the manufacturers have received little encouragement from the results of the sales agents' efforts. Usually at this time of the year the mills receive heavy orders for lumber from the retail yardowners in the middle west States, but at present the demand is so light that it amounts to practically nothing.

Improvement in Business Conditions.

Business conditions in British Columbia are improving rapidly and indications of this are apparent in the bank clearings of Vancouver, which last week totalled over \$5,000,000, the largest on record; in the land registry receipts, which for March were away ahead of all previous monthly totals; in the building, which, for the first three months of the present year, has created a new high-water mark, not only for the quarterly period but for each individual month. Timber is very active and many transfers are being recorded. Real estate is selling better than in the good times preceding the depression of a year ago. Shipping in and out of Vancouver and New Westminster is increasing rapidly, and the development of the province is resulting in a large number of new industries being constantly started. With the construction of the Grand Trunk Pacific in the north and short railways in different sections, British Columbia's prosperity is unequalled in any other part of the continent.

Large Purchase by American Company.

The sale of 32,892 acres of timber holdings by the Jordan Lumber Company, of Vancouver Island, to the Michigan Pacific Lumber Company was reported in the last issue of the *Canada Lumberman*. It is now reported that the same syndicate may increase their property by the purchase of other timber lands in the interior of Vancouver Island, in the vicinity of Cowichan Lake. This would bring their total interests up to 110,000 acres. The property desired is now held by separate concerns. Both have contracted to accept the prices offered and the Michigan Lumber Company will take possession providing the timber is found, on investigation, to be as valuable as it is represented. J. P. Brayton, of Chicago, has been commissioned to make a cruise of the timber at once. If he reports favorably the deal will be completed immediately. The sum involved in this event will aggregate \$50,000,000.

The property is located some 40 or 50 miles from Victoria on the southwestern shore of the island. It is a compact tract and that which has been secured from the Jordan Lumber Company, according to re-

port, consists largely of Douglas fir, with a goodly portion of spruce, cedar and hemlock. The plant, as it stands, apart from the buildings, includes a dock and a logging railway with equipment. Mr. B. Lyons, of Lyons & Welsh, of New York, who are negotiating the deal, declares that it is proposed to commence operations on a larger scale than heretofore without delay. Logs will be shipped to various points in the vicinity. Until the Michigan Lumber Company's plans have been decided the market will be confined to British Columbia and Sound cities.

Reported Advance In Western Prices of Lumber.

Advices from the Pacific coast, where the manufacturers have for some time been dissatisfied with current prices, say that it is understood that the cost of lumber in Winnipeg and through the Northwest is to be raised from \$1 to \$3 per thousand feet, according to the grade, taking effect April 1. The great demand for bridge and railway timber and for railway cars is given as the principal cause of the advance. Leading Winnipeg lumbermen state that they are utterly at a loss to understand the above reports. They state that no move of the kind has been made by any of the coast mills now shipping to the prairies, and are inclined to think that the rise in price has been the work of the retail dealers in the western provinces.

Business conditions east of the Rockies are reflected by the recent phenomenal increase in the demand for lumber. They promise soon to show further improvements, as 80,000 immigrants from the United States alone are expected to cross the border during the next few months. Statistics compiled by the freight traffic officials of the Canadian Pacific Railway at Vancouver show that the movement of lumber from the coast and Kootenays to the prairie provinces and Eastern Canada during last month increased 300 per cent. over the figures for the corresponding period of last year.

Extensive Timber Deals on Vancouver Island.

A number of important timber deals have been closed at Vancouver recently, and others are pending, the buyers in nearly every instance being Americans. W. J. Malcolm, of New Westminster, has sold 16,000 acres of fir and spruce located at Cowichan Lake, Vancouver Island, to Minneapolis investors. The consideration was \$45,000. The sale was negotiated by W. A. Ward, general manager of the General Agency Corporation, of Vancouver, in co-operation with F. J. King, of Seattle. They also sold Messrs. DeBeck and Tait of New Westminster, 1,400 acres of crown granted lands situated on the line of the Great Northern Railway in Langley district. The price was \$30,000. It is the intention of the buyers to erect a sawmill at once. The tract is estimated to contain 30,000,000 feet of timber.

Another deal just closed was the sale of the timber limits of Joseph Fisher, of Vancouver, to Andrew Howat, of Salt Lake, Utah. The area comprises eight sections on Craycroft Island, up the coast. The price was \$65,000. The same parties also bought 6,500 acres of timber lands from Messrs. Danaher & Hulbert, of Vancouver. The consideration was \$55,000. The limits are situated on Broughton Island.

A Coast Steamship Line to Mexico.

Negotiations which are under way have reached an advanced stage, for the establishing of a line of steamers from Canadian points, in connection with the Tehuantepec National Railway which runs from Puerto on the Gulf of Mexico to Salina Cruz on the Pacific coast. The negotiations are with the Elder Dempster line, for a service from Montreal in summer and St. John in winter, and with the Canada Mexico Pacific Coast line for a service between Salina Cruz and Vancouver and Victoria. It is hoped to provide monthly sailings with a through bill of lading, a guarantee against loss in transshipment, and rates from 30 to 40 per cent. lower than all rail.

Steps are being taken by the Canadian Manufacturers' Association to persuade the Legislature of British Columbia to abolish the Act which prevents extra provincial companies from doing business in the province. The support of the Mountain Lumbermen's Association has been sought in the matter. On account of the advanced state of the session, however, the matter could not be taken up and will now have to stand over until the next session.

A movement is on foot among Canadian manufacturers looking to the securing of reciprocal arrangements between Great Britain and Canada in regard to the patent law. It is thought, however, that some Canadian manufacturers may not be prepared to allow patents registered in Great Britain all the privileges afforded by the Canadian patent regulations and the matter is at present hanging fire, pending the receipt of further information on the subject.

Lumber Matters in the Law Courts

Responsibility for Injuries to Engineer Dispute Regarding Commission for Sale

Injury to Logging Engineer—The plaintiff has been awarded a verdict of \$2,500 in the case of Woodruff v. Vipond at Victoria, B.C. The case, which was stubbornly contested in the courts before Mr. Justice Irving and a jury, was one in which an engineer in a logging camp sued for damages on account of an accident sustained during logging operations. Contradictory accounts of the accident were given, but Woodruff's account was that while cleaning up a chute preparatory to moving, the hooktender instructed him to move a fender log a few feet to where it would be floated off by high water. While doing this, and watching the hooktender, who was giving him the necessary signals, he was suddenly struck from behind and swept off his feet on to the machinery. The result was that his ankle was badly broken, his clothes torn and he was otherwise hurt. While unable to say for certain what struck him he believed it to be a hemlock log, some 12 feet long by 6 inches thick, which was lying near him directly after the accident and was not there before. The theory was that it had been lying unnoticed in the chute, and had jumped out of the chute by the pressure of the fender log. It was claimed also that it was the business of the man in charge of the gang to see that the chute was free from obstructions.

With the exception of one witness, who said that he hemlock log had been lying near the engine for some time, the defence was at a loss to account for its presence. Nobody seemed to have seen it, although one of the witnesses for the defence stated that it might have lain unnoticed in the chute. The defence urged that the engineer was in charge of the chute, and that it was his duty to see that the chute was clear. They said that Woodruff had been ordered to roll the fender log into the chute, but that he had used too much steam, with the result that it had sprung across the chute, knocking him over. It was also urged that the donkey engine was on the wrong side of the chute, and thus materially increased the risk incurred by the engineer. Several experienced loggers were called on each side as to this, and considerable difference of opinion developed between the experts. The case was handled for the plaintiff by Wm. C. Moresby and R. C. Lowe. W. H. Langley appeared for Mr. Vipond.

Recovery of Commission For Sale—The case of Bent v. the Arrowhead Lumber Company has been determined by the Court of Appeal. This was a New Westminster action for the recovery of commission for the sale of certain British Columbia lands. At the first trial Judge Mathers entered a verdict for the plaintiff for \$25,000, being one-half of the amount claimed. Both sides appealed against the decision. Judgment was delivered by Mr. Justice Phippen, holding that, under the circumstances of this case, the company could not be held liable for the commission, and that the verdict for the plaintiff must be set aside, and judgment entered for the said defendants with the costs of the trial and of the appeal. Thomas Meredith, of New Westminster, is the principal shareholder in the company. Bent is a Chicago real estate agent, and claimed to have brought the parties together, making the sale.

Injunction Against Sale of Leases—An injunction has been obtained by William E. Green in the Supreme Court of Vancouver restricting Charles T. Dunbar from disposing of certain timber leases worth between a quarter and half a million dollars in which he claims that he is entitled to a half interest. The application was made ex-parte by Mr. Macdonell, K.C., who read an affidavit of the applicant stating that he had been a clerk in the Department of Lands and Works at Victoria and that he was induced to come over to Vancouver and join Mr. Dunbar on the understanding that he would have a half interest in the timber that would be staked. A certain number of leases were staked, amounting to perhaps a quarter to a half a million dollars and Mr. Dunbar now repudiated any agreement of the kind. Mr. Dunbar is in California at the present time and would be there for some weeks he understood, but the matter could be contested on his return by an application to discharge the injunction. The injunction was granted by Mr. Justice Celement.

Suit to Recover Timber Limits—An action has been instituted in the Superior Court of the District of Montreal, involving the ownership of timber limits, calculated to be worth in the vicinity of \$500,000, and in which several people of the Ottawa district are interested. The plaintiff is Mr. James Bell Klock, Aylmer, and the defendants are the Molsons Bank, and the heirs and executors of the late Robert Hurdman. Mr. Klock asks that the claim of the bank against four hundred square miles of timber limits transferred to the bank in pledge by him, be compensated by the value of the timber cut upon these limits by the heirs of the late Robert Hurdman, with the approval of the bank, and the waste committed on the limits, and that the rights of Hurdman in the limit be declared forfeited under the terms of sale in connection therewith by reason of their failure to comply with the conditions; that the bank's claim be declared compensated and paid by the value of timber removed and wasted, and that the bank be ordered to transfer the limits to the

plaintiff, and in default of their so doing that the judgment to be rendered stand in place of such transfer for all purposes; and further that the bank be condemned to pay the plaintiff the sum of \$25,000, the balance due him after compensating the amount claimed due the bank.

Auction Sale of Timber Limits.

An auction sale will be held by the Royal Trust Company at Ottawa, on Sept. 30th next, at 2.30 p.m., of the following timber limits on the upper Ottawa in Quebec province:

Limit No. 580 of 1908-09, south half lot 16, range 4, block A, 25 square miles; limit No. 581 of 1908-09, south half lot 14, range 3, block A, 21¾ square miles; limit No. 582 of 1908-09, Grand Lac Victoria, River Ottawa, 19 square miles; limit No. 583 of 1908-09, north half lot 16, range 4, block A, 9½ square miles; limit No. 584 of 1908-09, north half lot 16, range 3, block A, 15½ square miles; limit No. 585 of 1908-09, north half lot 15, range 3, block A, 18 square miles; limit No. 586 of 1908-09, south half lot 17, range 5, block A, 25 square miles; limit No. 587 of 1908-09, north half lot 16, range 4, block A, 25 square miles; limit No. 588 of 1908-09, north half lot 17, range 4, block A, 25 square miles. Total, 183¾ square miles.

The limits are all surveyed and said to be easy of access by a good roadway from Ville Marie. They are said to comprise some of the best pine and pulp areas in the province. The terms of sale are to be 10 per cent. of the purchase money at the time of sale, and the balance in equal instalments at one, three and six months, with interest at 5 per cent.

Deadheads in the Ottawa River.

An interesting question has been discussed recently in the press of Ottawa, in connection with the length of time during which logs are permitted to remain in the river from the date of cutting. Some agitation has been made by people who object to logs remaining for a long time as they are to a certain extent a menace to navigation and a nuisance to property owners when allowed to collect on the river banks and remain there for a long time. A proposal has been made that the logs should be branded with a date and allowed only a certain time in the river before being liable to confiscation. Several lumbermen when interviewed objected strongly to this plan. They claimed that frequently it happened that logs required two years to reach the river from some camps. It was also claimed that the stealing of logs would be rendered more easy by such a regulation. River pirates might put dates on the logs and claim that they had been in the water beyond the time limit. Some lumbermen suggested the offering of a bonus for every deadhead brought to shore. It is not expected that the agitation will have any effect as those concerned do not appear to be sufficiently inconvenienced to take concerted action.

Better Condition in Ottawa Trade.

According to the statement of an Ottawa authority business will be much brisker in lumber circles this year than last. More timber will probably be cut and more men furnished with employment. Last year's small cut enabled the large dealers to get rid of the surplus stock which had lain stored in their yards and they would find it necessary this year to resume operations on a large scale. "I have been told that one large firm are shipping timber away every day," he said, "and I have no doubt the other firms are doing the same." He attributed the slackness of last year's demand to the fact that very little building had been done in the United States and Canada, but this would probably not be the case this season. One thing that would militate against a large cut, however, would be the probability of low water this year. It was recently stated by Mr. J. R. Booth to have been one of the causes for the large amount of logs left over from last year's cut. On account of the smallness of the snow-fall this season, fears are being entertained that the water will be correspondingly low.

A Belfast firm, in referring to their desire to get into touch with Canadian manufacturers of doors, say: "It is a very remarkable fact that all the pine doors imported here are of United States make, notwithstanding that the lumber from which such doors are made is cheaper in Canada than in the United States, and similar lumber is in fact imported into the latter country from the former. Nevertheless, Canadian manufacturers do not seem to be able to compete in prices with those across the border."

Reports of a proposed strike of the seamen on the Great Lakes are making lumber dealers anxious. Owners of vessels say that if the strike materializes the lumber carrying business will be at a standstill on the lakes until a settlement is effected.

It is estimated that the Edmonton mills are cutting 15,000,000 feet of native lumber annually and within a radius of 100 miles another 10,000,000 feet are cut.

A Good Demand for Georgian Bay Stocks.

George D. Jackson, of the Little Current Lumber Company, operating a large mill plant at Little Current, Ont., in a recent interview said that 80 per cent. of the lumber to be manufactured in the Georgian Bay district this coming season already has been contracted for and is out of the market. There is little available stock now on the mill docks that is unsold. There has not been much change in the price of high grade white pine in the district. Mill culls are quoted \$2 a thousand lower than they were last fall and are selling now at \$13 and \$14. He says culls and Norway are the troublesome factors, Norway being off \$6 a thousand, as compared with 1907, and there is no money in manufacturing it at existing prices, as the actual average cost of putting lumber on the mill docks is \$13 to \$14.50 a thousand. He is confident that when the tariff measure is disposed of by the United States Congress, business will materially brighten up and prices for low grade stock will improve.

The sawmills in the region along Lake Huron and east of the Mackinac division of the Michigan Central Railroad, between Bay City and the straits of Mackinac, did not make as good a record last year as during preceding years. The depression in the lumber trade, and the forest fires interfered with the business to a considerable extent. The output of these mills last year amounted to 144,747,509 feet of lumber, compared with 167,348,498 feet in 1907; 197,532,904 in 1906, and 184,532,000 feet in 1905. The lumber output last year was divided as follows: Pine, 22,667,090 feet; hemlock, 59,489,040, and 62,591,370 feet of hardwood. There was a big falling off in the hemlock output last year, compared with 1907, when the total hemlock product was 86,647,289 feet. The hemlock trade was flat last year and there was consequently less incentive to manufacture. There was only a difference of 2,000,000 feet of pine in the two years, while the hardwood output last year was 8,000,000 feet in excess of that in 1907. Last year the output of lath was 21,006,550 pieces, 11,000,000 less than in 1907, and 59,046,000 shingles last year, compared with 84,170,000 the preceding year. It is estimated the conditions being more favorable the lumber production this year will be considerably larger than it was last year.

An Important Discovery for Utilization of Waste.

Important results are claimed by Dean George D. Frankforter, of the College of Chemistry of the University of Minnesota, who is said to have discovered a method by which a hundred times as much wood pulp paper can be produced as was believed possible. It is claimed that the discovery means that every cord of fir lumber will yield \$10 on by-products alone, and that most of the 60 per cent. of a tree now wasted will be utilized.

Dr. Frankforter says that he has been experimenting for twelve years. He describes the process as placing small pieces of waste wood or sawdust on a steel incline over a furnace and forcing distillation of the waste wood by saturating it with carbon disulphide, or gasoline, thus causing the turpentine and resin to pass off as gases and leaving wood pulp free from pitch and perfectly adapted to the manufacture of paper. The common method of distillation leaves the pulp in the form of charcoal, chemically of little value. Dr. Frankforter extracted from one cord of Norway pine, worth \$7.50, turpentine worth \$41 and wood pulp worth \$39, a yield of \$80 from \$7.50 worth of raw material.

The Ontario Government has published a report on the reforestation of waste lands in Southern Ontario, prepared by E. J. Zavitz, professor of forestry at the Ontario Agricultural College. The report is exhaustive and interesting. There is at present, it states, in the old settled portion of Ontario an aggregate of about 8,500 square miles of farmers' woodlands. It is safe to say that there is, in addition to the assessed woodland, another area of 8,500 square miles which is suited only for forest growth. This means that Southern Ontario could eventually have over ten million acres of private woodlands. The report shows that the adoption of scientific forestry methods in these districts would result in much benefit to the country.

An amendment to the Stationary Engineers' Act has been introduced in Parliament stating that no one shall be eligible to take the examination for a stationary engineer unless he is a British subject and has resided in Canada for at least three years. The Canadian Manufacturers' Association fear that this might cause serious trouble in times of labor difficulties and it is possible that the association will bring its influence to bear in opposition to the bill.

A movement is on foot among members of the Canadian Manufacturers' Association to persuade the Ontario Government to do away with juries in Division Court cases. It is held that in cases in which farmers are the defendants the local feeling is often so strong that verdicts given for the defendants are plainly unjust.

The commercial travellers' tax in Prince Edward Island has been abolished.

Business and Personal.

Ralph Loveland, of Loveland & Stone, Saginaw, Mich., recently visited New York on business.

D. K. Loveland, of the Saginaw Lumber & Salt Company, paid a business visit recently to Cleveland, Ohio.

Mr. Wilson, of the Wilson Lumber Company, Limited, Toronto, has returned from a business trip to the Southern States.

Smith & Tyrer, the well known wood brokers of Liverpool, Eng., have changed their address from 14 Tithebarn street to Richmond Buildings, 26 Chapel street, Liverpool.

W. W. Fraser, president of the Gibbons Lumber Company, Limited, of Arrowhead Lake, B.C., returned to Winnipeg recently from British Columbia, where he spent several weeks in connection with the business of his company.

W. A. Ward, general manager of the General Agency Corporation, Limited, of Vancouver, and F. J. King, of Behner & King, timber dealers of Seattle, Wash., have been appointed western representatives for Messrs. Lyons & Welsh, New York, and any transactions which the latter may put through as a result of their recent tour of the Pacific northwest will be handled by these firms.

R. J. Watson, of Burk's Falls, Ont., recently arrived in Revelstoke, where he will have his headquarters, having been appointed by the Dominion Government to look after all Federal timber interests in British Columbia. Mr. Watson has been a resident of northern Ontario for 30 years, and in 1904 was elected representative of the Parry Sound district, succeeding the late George McCormick, the well known lumberman who died about a year ago.

Mr. W. J. Paterson, of the Paterson Timber Company, Limited, Vancouver, B.C., has left for Great Britain and Europe. Mr. Paterson will investigate the manufacture of wood products from mill refuse with the view of establishing large works for that purpose in Vancouver. While away he will visit manufacturing concerns in Great Britain, France, Germany, Italy, Norway and Sweden. He will also look into the forestry regulations of the different countries visited, so that, as president of the Loggers' Association of British Columbia, he may be able to advise the association as to what attitude they should take before the forestry commission to be appointed by the Provincial Government and which is to hold sessions during the coming summer.

Irving P. Easton, formerly New York manager for the Robinson-Edwards Lumber Company, Burlington, Vt., and W. C. Edwards & Company, Limited, Ottawa, Ont., has been succeeded by Desmond N. Meighen. The latter is a brother-in-law of Gordon C. Edwards, of the two companies, and has lived at Burlington and Ottawa and is fully equipped with experience to enable him to get right into the harness. Clarence L. Smith, of the Robinson-Edwards Lumber Company, has been in New York for a few days making the change and the combination of the two companies, which are well known in New York, gives Mr. Meighen, whose office is at 1 Madison avenue, a fine line of spruce and white pine. It is reported that Mr. Easton will engage in business on his own account.

Obituary.

Henry F. Todd, of the lumber firm of F. H. Todd & Sons, St. John, N.B., and brother of W. F. Todd, M.P., died at his home in St. John recently. Mr. Todd was 62 years old.

A well known resident of Ottawa, who was formerly a prominent lumber operator, died at his residence, 434 Gloucester street recently, in the person of Peter Villeneuve. The deceased had been ill only three days, having sustained a paralytic stroke, from which he never recovered. He was 66 years of age.

Mr. Villeneuve was born in Aylmer, but had lived in Ottawa nearly all his life. He held the position of foreman and agent for the firms of Perley and Pattee, and for other companies, and was always known as a most capable man for the post. Among other features of his work at that time, one he was wont to recall was that he had formerly lumbered and erected shanties on the spot where Cobalt's richest mines are now located. Latterly, Mr. Villeneuve had been in the employ of the Public Works Department. He is survived by his widow, three sons, and two daughters.

About 7,000 tons of pulp have been carried over the Halifax & South Western Railway so far this season to be shipped to England. The deal and pulp trade for the next two months promise to be large, and that will about end up the season.

Mr. McGarry's bill to amend the Division Courts Act has been sent on to the Ontario Legislature. Lumbermen and those engaged in lumbering camps are protected under the new clause from lumbermen who engage men at big wages and then fleece the workmen out of their money. Under the new clause action may be brought where the contract is made.

United States Lumber Cut in 1908

Total Decrease of Five and a Half Billion Feet — Stocks on Hand Much Reduced

According to statistics compiled by the "American Lumberman" the lumber cut in 1908, in the United States, totalled 20,210,622,000 feet, against 25,648,731,000 feet in 1907, a decline of 5,438,109,000 feet or 21.2 per cent. Statistics for the last three years are as follows:

	1906	1907	1908
No. of mills reporting	5,146	6,402	6,253
Total cut	24,224,165,000	25,648,731,000	20,210,622,000
Stocks	6,745,693,000	7,760,897,000	6,854,507,000
Shingles	8,785,831,000	9,290,279,000	9,516,403,000
Lath	1,627,960,000	1,692,368,000	994,896,000
Shingle stocks	859,039,000	944,213,000	1,298,142,000
Lath stocks	446,839,000	562,312,000	431,870,000

Stocks on hand at the close of business in 1908 were considerably lighter than reported for the preceding year, the gross difference being 906,390,000 feet. This is equivalent to a decrease of 143,353 feet in the stocks of each concern reporting. The decrease in production averaged 774,156 feet for each concern reporting. In explanation of the discrepancy between the average production and the average stock, it should be understood that stocks increased very rapidly during the latter part of 1907. Production in 1908 was carried on in excess of the demand and as a result stock statements at the end of the year showed very heavy gains.

Operators in the Great Lakes States carry larger stocks than do those of any other of the other softwood manufacturing sections. In white pine 65.7 per cent. of the cut was held at the close of the year; in hemlock 53.3 per cent.; in yellow pine only 25 per cent. of the cut was held at the close of the year. Manufacturers of western white pine held 49.2 per cent., in western yellow pine stocks were equivalent to 42.3 per cent. of the product, and in sugar pine 42.6 per cent. The heaviest stocks were of miscellaneous softwoods, of which about 75 per cent. of the cut was reported on hand at the close of the year.

Cypress, classified as a hardwood, stands at the head of the list with respect to the quantity, retained by producers, stocks at the close of the year being the equivalent of 74.4 per cent. of the cut. There were comparatively heavy stocks of birch, gum and cottonwood. Oak, maple, basswood and poplar stocks were below the average for all hardwoods.

Among the more notable features brought out by the 1908 report is a decrease of more than 1,000,000,000 feet in the cut of northern pine in Michigan, Wisconsin and Minnesota. The percentage of decrease was heaviest in the west of Chicago district, where production fell off to the extent of 917,321,000 feet. In the Chicago district there was a decrease of about 108,000,000 feet and in the east of Chicago district there was a dropping off of about 26,060,000 feet.

The cut of hemlock in the northern states also was very much lighter, the decrease being a little more than 165,000,000 feet, or about 13 per cent. The decrease in the cut of northern pine was 41 per cent. Stocks showed a decrease of a little over 20 per cent.

On the Pacific coast heavy losses were reported for every state except Oregon. The gain in that state was more than offset by the decreases in the others, so that production in the west during 1908 was the equivalent of seven-eighths of the cut for the previous year. The total production was 815,000,000 feet below that of 1907, notwithstanding Oregon showed an increase of nearly 235,000,000 feet. The heaviest decrease was in redwood, the 1908 cut being equivalent to only 53.5 per cent. of the output during the preceding year. The production of sugar, white and yellow pine in the west was much lighter than reported for 1907. The heaviest loss was reported in the output of Washington, which was 655,871,000 feet below that of 1907, the principal loss being in fir.

In the principal yellow pine producing states of the south a decrease of nearly 20 per cent. was shown in the output. The Georgia and Oklahoma reports show small increases, but the other contributors to the yellow pine supply showed decreases ranging from 8.6 per cent. in Arkansas to 33.6 per cent. in Florida. Texas mills reported a decrease of 32.5 per cent. The southern mills do not carry as heavy stocks as do those in the northern states. There was a slight increase in the percentage on hand at the close of the year, but the mills had a little less than one-third of their cut on the yard, as against 70 per cent. in the case of northern pine and about 73 per cent. in northern hemlock.

With the exception of Maine the New England and northeastern states cut less lumber in 1908 than during either 1906 or 1907. The increase in Maine was 50,000,000 feet. There was a decrease of 30,000,000 feet in Maryland, in New York of a little over 100,000,000 feet, in Pennsylvania of about 490,000,000 feet, in Vermont of 20,000,000 feet and in West Virginia of 114,000,000 feet. The product of the states named was 705,862,000 feet below that of 1907. In Maryland, New York, Pennsylvania, Vermont and West Virginia there was a decrease aggregating about 756,000,000 feet, from which the increase of 50,000,000 feet in Maine must be subtracted to show the net loss.

The output of pine in the Carolinas and Virginia was in excess of the 1,000,000,000-foot mark, but the very heavy decrease of 319,848,000 feet is shown when the cut is compared with that of the previous year. These states also reported a small output of longleaf pine, white pine and hemlock. The oak product of these three states was only a little more than one-half that of 1907. Poplar showed a decrease of over 30,000,000 feet, gum a very light loss and chestnut production was cut practically in half. The output of other woods was not very heavy, small increases and decreases being shown in ash, hickory and mixed hardwoods.

Direct reports were received from 6,153 institutions. These reports show 31 mills to be idle but having some stock on hand, and 623 mills to be idle without stocks. During the year 603 mills were burned, dismantled or exhausted their timber supply. Eight new mills were reported as having been built but not operated during 1908. This covered the direct returns. In the indirect reports the cut of mills in several associations were secured and the estimate of mills in certain districts known to have been operated brings the total number of mills covered by the figures given up to 6,253.

Trade Enquiries.

The Dominion Government Trade and Commerce reports contain the following trade enquiries. Readers of the "Canada Lumberman" may obtain the names of enquirers by writing us, enclosing stamped envelope and stating number of enquiry:

271. Pine Sidings.—A Manchester firm asks for prices and sizes of pine sidings from Canadian exporters.

274. Laths.—A Liverpool firm asks for prices and sizes of plasterers' laths from Canadian manufacturers.

275. Hardwood blocks.—A Liverpool firm asks for prices and sizes of hardwood blocks in oak and maple from Canadian manufacturers.

278. Birch squares.—A Manchester firm asks for prices and dimensions of birch squares from Canadian exporters.

280. Box shooks.—A Manchester firm asks for prices and sizes of box shooks from Canadian manufacturers.

281. Wood moulding.—A Liverpool firm asks for prices and descriptions of wood moulding for house decoration from Canadian manufacturers.

290. Pine doors and spruce deals.—A Belfast firm invites quotations from Canadian manufacturers of pine doors and is also desirous of forming a connection with a first-class Canadian shipper of spruce deals.

329. Wood and sawn goods, etc.—A Newcastle-on-Tyne firm of general merchants and importers would like to get into communication with Canadian shippers of wood and sawn goods, etc.

337. Ores, metals, lumber, etc.—A firm in the North of England wishes to open up correspondence with some Canadian exporters of ores, metals, lumber, etc., requiring a market in Great Britain.

343. Building material.—A Manchester firm invites offers from Canadian manufacturers of doors and other building material.

346. Wood.—A London firm wishes to get into touch with Canadian exporters of white round wood.

360. Pine, spruce deals, flooring, etc.—A South African firm of commission agents desire to communicate with Canadian exporters of pine and spruce deals and spruce ends; tongued and grooved birch flooring, and poplar and ash.

363. Lumber.—A South African firm desires to communicate with Canadian exporters of Oregon pine deals, spruce deals, pine boards and clear pine.

364. Satin walnut.—A South African firm of wholesale merchants desire to be placed in touch with Canadian exporters of satin walnut.

366. Wood.—A South African firm of wholesale merchants desire to communicate with Canadian exporters of hickory, ash, birch and oak.

368. Staves.—A South African firm of wholesale merchants desire to communicate with Canadian manufacturers of staves.

369. Bass boards.—A South African firm of wholesale merchants desire to communicate with Canadian manufacturers of bass boards.

375. Veneer.—A North of England firm, having a large outlet for 3 and 5 veneered wood for use in cabinet making, would be interested in hearing from Canadian manufacturers.

376. Timber.—A Lancashire firm wishes to secure the representation of Canadian exporters of timber and other building materials.

The amount of dues collected on account of timber in the Yukon Territory during the last fiscal year was \$17,555.22. There are in existence 114 timber berths held under license to cut timber within the territory, covering an area of 270.11 square miles, which licenses were granted prior to May 10, 1906, on which date the regulations governing the granting of the licenses to cut timber in the territory were rescinded and regulations for the issue of permits to cut such timber substituted therefor. Three sawmills are in operation within the territory, two on the Klondyke river near Dawson and one on Twelve mile river. According to Government returns the number of feet of lumber, board measure, manufactured during the year was 3,116,967, and the quantity sold 3,220,669, a quantity of the lumber having been held over from the previous year. The number of cords of wood cut during the year was 5,509, and the number sold 5,697. This does not include the very large amount of timber and cordwood cut free of dues for mining purposes.

THE WOODWORKER

The Shape of Resaw Blade Teeth.

There has been a great deal of discussion regarding the shape of teeth for a resaw blade. Some writers have argued that a tooth of a certain shape is better for all classes of work. The experience of a large machine manufacturing company, together with an elaborate series of experiments conducted by them, does not, however, confirm this. Various experiments have been made in spacing to note results. As a rule, it is best to have as many teeth cutting as possible, but the teeth must not be placed too close together or the dust produced will be very fine and have a tendency to plaster on the sides of the board and cause friction on the blade. The coarser the sawdust can be made the better the teeth

will drag it out of the cut. Teeth can be spaced much closer together for soft-grained woods than for hard, close-grained woods, because in soft woods the dust breaks out in large particles, while in close-grained woods it breaks out in the form of a very fine powder.

Sufficient room should always be provided in the gullet of the tooth to "chamber" the dust properly. There are two ways of providing this space. One is to space the teeth farther apart. The other is to reduce the amount of metal in the tooth, thus increasing the size of the gullet. The correct form and spacing of teeth depend upon the nice balancing of these two conditions.

Where various woods are to be cut it is often necessary to strike an average. Experience has proved that teeth spaced from one and one-half to one and three-fourths inches apart give the best results on various kinds of woods.

Ordinarily it is best to carry as much "hook" as possible without

decreasing the strength of the tooth. The greater the "hook" the more easily the saw cuts, but on cross-grained and hardwoods it should not be exaggerated or the tooth will have a tendency to bend sidewise and follow the grain.

A saw tooth should contain as much metal as possible, but there are two conditions which limit the amount. One is that there must always be sufficient gullet provided; the other in cutting such woods as southern pine, and fir, that are very rich in pitch, the tooth should have as little metal as possible and still have the required strength, for the reason that there is less surface to which the pitch can adhere.

We show forms of teeth which are recommended for different kinds of wood, but many variations may be made to suit special conditions. The forms shown are for 19-gauge saws. If thicker saws are used, the teeth can be slightly deeper and not quite as deep for thinner saws.

No. 1. White pine and other soft woods.

No. 2. Cottonwood and other woods of a fibrous nature.

No. 3. Yellow pine, fir, and other pitchy woods.

No. 4. Hardwoods, such as oak, maple, elm, gum and mahogany.—The Woodworkers' Review.

How to Figure on Box Dimensions.

At the annual convention of the National Association of Box Manufacturers of the United States recently held at Chattanooga, Tenn., an interesting communication was read from Mr. James M. Leaver on box making. Mr. Leaver wrote as follows:

I give my ideas of how a box $17\frac{3}{4} \times 10\frac{1}{4} \times 8\frac{1}{4}$ should be figured:

Style No. 1; Example 1.		
$\frac{7}{8}$ -inch ends	$10\frac{1}{4} \times 8\frac{1}{4}$	1.175
$\frac{3}{4}$ -inch sides	$19\frac{1}{2} \times 8\frac{1}{4}$	1.117
$\frac{3}{8}$ -inch T&B	$19\frac{1}{2} \times 11\frac{1}{2}$	1.557
Total feet	3.849

Example No. 1 is figured as if made from wide lumber which admits of sides and ends being made without ripping waste other than natural defects of stock and the cross-cutting waste incidental to defects, and short ends of board (unfit for any other purpose than kindling wood) and which latter should be cut at the time box under consideration was being made. This waste is determined by the nature of stock and should be known by every manufacturer. I allow $\frac{1}{2}$ -inch for matching top and bottom when made of two pieces, as in the example, or about the actual ripping size of these parts.

Style No. 1; Example 2.		
$\frac{7}{8}$ -inch ends	$10\frac{1}{4} \times 9$	1.281
$\frac{3}{4}$ -inch sides	$19\frac{1}{2} \times 9$	1.219
$\frac{3}{8}$ -inch T&B	$19\frac{1}{2} \times 11\frac{1}{2}$	1.557
Total feet	4.057

Example No. 2 is figured on the supposition that 9-inch boards are obtainable for sides and ends, otherwise this example is figured as per Example No. 1.

Style No. 1; Example 3.		
$\frac{7}{8}$ -inch ends	$10\frac{1}{4} \times 10$	1.424
$\frac{3}{4}$ -inch sides	$19\frac{1}{2} \times 10$	1.354
$\frac{3}{8}$ -inch T&B	$19\frac{1}{2} \times 11\frac{1}{2}$	1.557
Total feet	4.335

Example No. 3 is figured on the basis of using 10-inch boards for sides and ends, as some box men must do, otherwise figuring is as per Example No. 1.

Styles Nos. 2, 3 and 4—Ends not matched. S., T. & B. matched. All parts named in two pieces are figured per exact cutting and ripping sizes, with matching allowance of $\frac{1}{2}$ -inch on sides, tops and bottoms.

Style No. 2.		
$\frac{7}{8}$ -inch ends	$10\frac{1}{4} \times 8\frac{1}{4}$	1.175
$\frac{3}{4}$ -inch sides	$20\frac{3}{4} \times 8\frac{1}{4}$	1.261
$\frac{3}{8}$ -inch T&B	$20\frac{3}{4} \times 11\frac{1}{2}$	1.657
$\frac{5}{8}$ -inch side cleats	$8\frac{1}{4} \times 4$344
$\frac{5}{8}$ -inch T&B cleats	$10\frac{1}{4} \times 4$261
Total feet	4.698

Style No. 3.		
$\frac{7}{8}$ -inch ends	$10\frac{1}{4} \times 8\frac{1}{4}$	1.175
$\frac{3}{4}$ -inch sides	$20\frac{3}{4} \times 8\frac{1}{4}$	1.261
$\frac{3}{8}$ -inch T&B	$20\frac{3}{4} \times 11\frac{1}{2}$	1.657
$\frac{5}{8}$ -inch side cleats	$8\frac{1}{4} \times 4$344
$\frac{5}{8}$ -inch T&B cleats	$10\frac{1}{4} \times 4$427
Total feet	4.864

Style No. 4.		
$\frac{7}{8}$ -inch ends	$10\frac{1}{4} \times 8\frac{1}{4}$	1.175
$\frac{3}{4}$ -inch sides	$20\frac{3}{4} \times 8\frac{1}{4}$	1.261
$\frac{3}{8}$ -inch T&B	$19\frac{1}{2} \times 11\frac{1}{2}$	1.557
$\frac{5}{8}$ -inch cleats	9×4375
Total feet	4.368

The three methods of figuring Style No. 1 are used according to conditions. The method shown in Example No. 1 is also used, unfortunately, by some who do not, or will not, understand that when ripping waste is such as to create an arbitrary condition, it should be absorbed in the figures and not in the estimated waste percentage which covers all classes of work. In my opinion, the closer we get to actual lumber consumption in our figures, the nearer we will come to making profit. To figure one price stock on the basis of width of board used is really figuring all styles of boxes on one basis. Statistical figures based on exact cutting and ripping sizes are very useful for proving waste made by defects and unusable cross-cuttings. With careful assorting of widths in cleated styles very little waste need be made in the ripping process. But those manufacturers who figure matched parts on the same basis as if not matched are giving a portion of their lumber away.

The Construction of a Back Rest.

The back rest has been truly termed the turner's third hand, as it serves the purpose of steadying the work in the lathe, leaving his natural hands free to manipulate the tools, says C. Tobyansen in the "Woodworker." On long and line turnings the assistance of a back rest is an absolute necessity. It is of great consequence then, that this contrivance does its service properly. It must centre truly to the work, create no undue friction, thereby burning and marring the article of production, and lastly—but not least—it should be speedy of adjustment, and, once adjusted, "stay put."

The seeking of these attainments has given rise to many varying forms, some of which have been patented and are manufactured for the market, but a far larger number are constructed by the turner himself and may be termed home-mades. We have used patented forms—frictionless, they are called—having small wheels which press on the work. These serve well enough for a while, until the wheel bearings get worn, then behold a rattlebox! They then make noise enough to wreck one's

nerves; and if yours is not a case of "nerves" constitutionally, you will speedily develop a case.

It would be out of the question to enumerate the many home-made forms—or failures—I have used and observed in my twenty years of experience as a wood-turner. It seems as if every new mill you enter has some peculiar and characteristic contrivance of its own, some of them wonderful and fearful to behold. Still, many have good points, and the one I am about to present for the reader's consideration is a composite of these, "aided and abetted" with some ideas of my own. It is meant for balusters and furniture turnings only, not for heavy work such as columns and the like. It is seldom that a back rest is required on these unless they are out of the ordinary in length.

Our back rest is made entirely of hardwood, excepting, of course, the necessary bolts. Fig. 1 shows face and side views. A represents the lathe ways; B a block which, in conjunction with the bolt D and the wedge C, serves to fasten the back rest on the lathe; E is the base, F the upright, G the arm with its adjustable and interchangeable extension; H I we will call the pressure plate, as it receives the locking pressure from the eccentric lever K, which securely holds the arm in the desired position. This lever swings on the bolt M, and another bolt marked N secures the extension piece, or hand, if you like, marked H. The two bolts marked L complete the enumeration of parts.

Proceeding to fig. 2, we find the base and upright E and F. I believe the working drawings self-explanatory. These parts may be fastened together with bolts, as suggested in sketches, or they may be fitted and glued and further secured by screws on each side. It is immaterial how so long as the needed stability is attained. The height of the upright from A to B will vary according to the height of the lathe centre. Other dimensions are all given.

The pressure plate, fig. 3, should fit rather snugly between the shoulders, as this overcomes the backward pull of the eccentric when applied, leaving the arm stationary where it is placed. Fig. 4 shows the arm and extension G and H. Care must be taken that the seat marked C, fig. 2, is perfectly flat, or a little hollow, if anything, otherwise the arm will be

wobbly, and this destroys its efficiency. The extension H should fit closely into the jaws of the arm, so when the bolt nut is tightened the jaws will hold it firmly.

A cross-section at 9 B is shown in fig. 5. Note that the square bolt head it let into the wood to prevent the bolt turning when pressure is brought on the jaws by the nut D. Fig. 6 shows the eccentric lever, which should be so constructed that the pressure increases gradually as it is brought down, until it locks tightly. If it should develop through wear a tendency to slip, a piece of sandpaper between it and pressure plate will cure the evil.

That part of the extension H, fig. 4, which presses against the work E should be sawed on the band saw to fit closely at the point of contact. A piece of birch answers the purpose well. The grain should run endwise the contact point, since it is harder and wears more evenly; a drop of oil once in a while will make it very smooth. Do not bring it up hard against the work, as, of course, undue pressure is bound to develop heat and cause burning. Fasten your back rest in position where wanted, bring the arm up against the work so the extension contact fits nicely, then tighten arm with eccentric lever. The extension being so far loose in the jaws of arm, will thus adjust itself naturally, and may now be tightened with a monkey-wrench—and tighten it good and hard, as this is the only part which can "give."

Once properly adjusted, it is done for good and all, so far as the lot of work at hand is concerned, providing the balusters or whatever it may be are alike, as you can throw the lever and the arm back, or bring it up against your work, and lock in less time than the proverbial "shake of a lamb's tail."

Standard Stock Work by Local Planing Mills.

At times we find in actual practice the best laid and most logical theories actually reversed. There is now and then a manifestation of this reversal of theory in connection with planing mill work, wherein local planing mills find it advantageous to make what is termed standard stock work. There is a well-supported theory that the local planing mill which has no nearby source of supply for its rough lumber, should confine its work to the making of other things besides standard patterns or standard stock, such as flooring, casing, base, etc. The logic for this lies in the fact that the stock can be made at the planers, which are part of the sawmill equipment in the woods, and the saving in freight effected by doing the dressing there makes it possible to furnish this dressed stock at even a lower price than the mill can furnish the rough stock out of which to make it. Apparently this is a theory that should hold good, yet we find frequently in actual practice that while the logic is good so far as it goes, it doesn't go far enough nor take into consideration all the subject matter that has a bearing. For one thing, there is lots of work done in natural finish; that is, instead of paint, stain and varnish are used, and when lumber is wanted for this it is wanted fresh and clean. Too frequently the lumber that has been carried in stock shipped up from the mills in the woods becomes stained and black with age, accumulating dust and dirt of one kind and another, so that it doesn't meet with favor at the hands of builders. In fact, they figure that it is so much trouble to clean up dirty and black lumber to make it presentable that they would rather pay more for the stock in the first place and have it come fresh from the machines. Some even have their flooring run fresh just as they want to use it; and with basing, base and other kinds of mill work that is to be finished natural, there is nothing looks as well as stock freshly run, no matter how well it may be taken care of. Stock that is dressed at the mills to standard patterns, no matter how good the lumber nor how well the dressing may have been done, gets a little dingy and dead-looking, even if it doesn't get black and dirty, and is not worth as much to the critical builder as lumber that has been shipped rough and is dressed to pattern just before using. So there is lots of call for even standard patterns made at the local planing mill. They look better, finish up better, and are really better in that they present a fresh, live surface, that is stained and varnished before it gets dingy with age, and consequently remains fresh. This is a point that it is well for planing mills to keep in mind, because frequently one can enlarge the work at the mill and have better satisfied customers by calling their attention to this feature.—The Woodworker.

Australia's imports of timber during 1908 amounted in value to £1,890,835, being an increase of £258,780 over the imports in 1907. The Dominion Government Trade and Commerce reports state that there is a demand for oak for wine staves and for furniture in Australia. As a large number of the wine growers are Germans, oak from Germany has naturally been preferred for the staves; that for furniture has been secured from New York and is either of Canadian or United States origin. Past efforts to get into direct touch with Canadian timber people, who produce oak, lumber or staves, have been fruitless, but correspondence is now under way which may bring about substantial business.

H Arcand & Company, wood merchants, Champlain, Que., in a recent letter to the *Canada Lumberman* say: "We have found your journal very useful and indispensable for a wood merchant."

THE MACHINERY WORLD

What Manufacturers of Logging, Sawmill and Woodworking Equipment are Doing

A Progressive Firm of Machinery Manufacturers

The well known firm of McFarlane, Thompson & Anderson, founders and machinists, of Fredericton, N.B., manufacturers of the patented Dunbar shingle machine, began business in the year 1871, the heads of the firm then being Walter McFarlane and Peter McFarlane (both now deceased), and Fred P. Thompson (now a senator). They carried on a general foundry and machine shop business, manufacturing stoves, farming machines, mill machinery, etc. A few years later William Anderson was admitted into the partnership, and the present name was established. Shortly after this the firm stopped manufacturing mowing machines, hay rakes, etc., and devoted their efforts almost exclusively to shingle mill machinery, particularly their well known patented Dunbar shingle machine, which now has a splendid reputation among Canadian lumber firms.

After the death of Mr. Anderson in 1886, the business was carried on by Messrs. Thompson and McFarlane until May, 1906, when Mr. Walter McFarlane died very unexpectedly from an attack of heart failure. In May, 1908, Senator Thompson, the only remaining partner, retired, and the business was taken over by Smith Bros., nephews of Mr. Walter McFarlane, the firm name of McFarlane, Thompson & Anderson

Albert C. Smith, President McFarlane, Thompson & Anderson.

Percy G. Smith, Manager McFarlane, Thompson & Anderson.

being retained. These three enterprising young men have had experience in the business and already the concern is showing marked signs of advancement, as a result of their united efforts.

Mr. Percy G. Smith, the manager, whose portrait is published herewith, entered the employ of McFarlane, Thompson & Anderson in 1893, as pattern maker, and in 1899 went to the United States, returning in 1904. To his management is due the efficiency of the foundry department of the firm. Mr. Albert C. Smith, the president, whose portrait is also published, entered the employ of the firm in 1893 and after serving his apprenticeship went to the United States and the Canadian West, returning home in 1908 at the time of his uncle's death. He is now in charge of the machine and blacksmith department, being splendidly equipped for the work. Owing to his efforts the department is in a splendid condition. Mr. Harry A. Smith, the junior member of the firm, entered the woodworking department in 1901, and after serving his apprenticeship went to the United States and the Canadian West in 1905, returning in 1907. He is now in charge of the slaes and shipping department, for which work he is well suited.

The principal articles manufactured by this firm are the well known patented Dunbar shingle machine, railroad dump cars and supplies, mill machinery, iron and brass castings and stoves. It is their intention shortly, to commence the manufacture of an up-to-date lath machine. The manufacture of railroad dump cars is a new venture on the part of the firm, their first having been made in 1908. Their cars and wheels are already in good demand, and the firm will soon be in a position to increase the output. The shingle machine which they manufacture has a reputation of its own, and the demand this season far exceeds that of any previous season, orders coming from all parts of the Dominion and Newfoundland. The plant is obliged to run overtime to keep up with

the work. As the material and workmanship are so good, McFarlane, Thompson & Anderson products are unexcelled, and as the firm is composed of three energetic young men, who have had wide experience, it is sure to make rapid progress towards becoming one of the most prominent concerns of its kind in Canada.

An Economical and Popular Edger.

Lumber that is manufactured the best sells the most readily and demands the highest price. In days gone by, less was thought about ragged lumber than to-day; but the facilities for making perfect lumber have improved so much that much more is expected in this direction now than formerly, and few care to buy lumber unless it has straight and parallel edges and square ends, and is of standard widths and lengths.

The Gordon Hollow Blast Grate Company, of Greenville, Mich., claim that there is no other way in which lumber can be edged and trimmed so perfectly or economically as on a "Tower" or "Tower Extra" Edger and a "Tower" one-man, two-saw trimmer. These machines, they claim, increase the output of a mill without adding appreciably to its expenses, by reducing the cost of sawing the lumber on the one hand and enhance the value of the product on the other.

This company make an exceptionally complete line, consisting of sixty different sizes and styles of edgers and ten different sizes of trimmers. They build edgers for portable mills, stationary mills, sawmills and planing mills; ordinary edgers; twin edgers; edgers with levers;

No. 8 "Tower Extra" 36-inch Edger, New Model. Front table not shown.

edgers with hand wheels; edgers 32, 36, 42, 48, 54, 60 and 66 inches wide in the clear between guides; edgers with any number of saws, from two up; trimmers for mills cutting up to 30,000 feet in ten hours; trimmers for mills cutting up to 50,000 feet in ten hours; and trimmers that cut from a minimum of 6 to a maximum of 16, 18, 20, 22 or 24 feet; to say nothing of special machines. The purchaser is thus able to select an edger or a trimmer perfectly adapted to his requirements—one neither too large nor too small, wasting neither room nor power.

The New Champion Edger.

The Waterous Engine Works Company, Limited, Brantford, Ont., have issued a couple of bulletins describing their New Champion Edger and their Light Champion Edger. The New Champion Edger is suitable for mills of medium size and capacity, handling average run of logs. It is made in three widths and is strong, heavy and substantial. The general design of the company's heavy big Champion Edger has been followed closely. The Light Champion Edger is a small type of gang edger, suitable for small or semi-portable mills or for special purposes, where only a small edger is required. It is made in two sizes, No. 1 having two saws, one stationary and one moveable, and No. 2 having three saws, one stationary and two moveable. The saw space on each of the light machines is 30½ inches. Sawmill owners and others interested in edgers will do well to communicate with the Waterous Company regarding these machines.

The Linderman Machine Company, Muskegon, Mich, have favored the *Canada Lumberman* with an attractive sample of the work of their automatic dovetail glue jointer. The sample, which is designed in the form of a small desk tray or ash holder, shows that the machine is a splendid one. It turns out work of this class at a rate of 40 lineal feet a minute, while for core work the rate is increased one-half.

Timber Berth for Sale

CONTAINS 75,000,000 FEET OF SPRUCE, 40 miles from proposed G.T.P. divisional point on McLeod River, (210 miles west of Edmonton) and 20 miles from nearest point on river touched by rail- road. River drivable, berth easily lugged. Area 23 sq. miles. Timber from 12" to 35" through. Limit will produce over 2,000,000 railroad ties worth 40 cents average. Tremendous demand for ties at present time which is likely to continue for some years. Reasonable time will be allowed for examina- tion. Price \$35,000. W. S. HEFFERMAN, 257 Jasper Ave., E., Edmonton.

Sale of Valuable Timber Limits

THE UNDERSIGNED ARE INSTRUCTED to sell by Public Auction en bloc, at the Russell House, Ottawa, on September 30, 1909, at 2.30 p.m., the following Timber Limits situate in Block A, Upper Ottawa, Province of Quebec, viz:

Berth 676 Licence No. 580 of 1908-09, south half Lot 16, Range 4, Block A, 25 square miles; Berth 677, Licence No. 581 of 1908-09, south half Lot 14, Range 3, Block A, 21 1/2 square miles; Berth 611, Licence No. 582 of 1908-09, Grand Lac Victoria, River Ottawa, 19 square miles; Berth 678, Licence No. 583 of 1908-09, south half of north half Lot 16, Range 4, Block A, 9 1/2 square miles; Berth 679, Licence No. 584 of 1908-09, north half Lot 16, Range 3, Block A, 13 1/2 square miles; Berth 680, Licence No. 585 of 1908-09, north half Lot 15, Range 3, Block A, 18 square miles; Berth 681, Licence No. 586 of 1908-09, south half Lot 17, Range 5, Block A, 25 square miles; Berth 682 Licence No. 587 of 1908-09, north half Lot 16, Range 3, Block A, 25 square miles; Berth 696, Licence No. 588 of 1908-09, north half Lot 17, Range 4, Block A, 25 square miles.

Total 183 3/4 square miles. These limits are all surveyed and are easy of access by a good roadway from Ville Marie to their location. They comprise some of the best pine and pulp wood areas in the Province.

Terms—10 per cent. of the purchase money to be paid down at the time of sale, and the balance in equal instalments at one (1), three (3) and six (6) months thereafter with interest at the rate of 5 per cent. per annum.

For further particulars and conditions of sale apply to the Royal Trust Company (Ottawa Branch), and to Code & Burritt, Solicitors, Carleton Cham- bers, Ottawa.

Dated this 31st day of March, 1909.

THE ROYAL TRUST CO., Ottawa,
Trustees of Sale.

**Estimating Timber.**

In answer to a correspondent the "American Lumberman" publishes the following on the question of estimating merchantable timber:

Merchantable standing timber is a term used to define those trees from which can be manufactured lumber whose value is equal to or greater than cost of production plus stumpage. It could not, by any stretch of the imagination, be broadened so as to include bark, cordwood, tannic acid wood and similar by-products.

Ordinarily, when a tract of tim- ber land is sold the purveyor con- tents himself with conveying title to so many acres of timber land. It is customary for the buyer to make his own estimates as to the quan- tity of timber he thinks the lands contain. The seller could not be expected to guarantee the quantity for the obvious reason he has no voice in the methods to be used in converting the trees into lumber. If he had a voice he probably would insist that the manufacturer use the thinnest possible saws and that instead of cutting inch boards the logs be squared up into timber so as to do away with the waste of the saw kerf. A 12 x 12 x 20 would contain 240 feet board mea- sure. If this stick of timber should be cut into inch boards it would not be possible to make more than eleven at the outside and probably not more than ten, a loss of either 20 or 40 feet, equal in one case to 8 1/2 per cent. and the other 16 2/3 per cent.

Mr. W. A. Preston, M.P.P. for Rainy River, and Mr. Arthur Hawke, recently interviewed Hon. Frank Cochrane and Hon. Dr. Reaume in the matter of the es- tablishment of a large fish, game and forest reserve on the boundary line between Ontario and Northern Minnesota. The project is not a new one, for the size of the reserve has been practically decided upon. The Federal Government of the United States has consented to set aside a territory of a million acres of land in the northern part of Minnesota. It is hoped that a similar area will be set aside on the Ontario side, consisting of a half-million acres in Hunter Island and a half-million in the Quiteco country adjoining it to the north.

The Ministers were much inter- ested in the project, and it is prob- able that the members' ideas will be followed out.

FOR SALE

43 Steel Flat cars in perfect con- dition suitable for Lumber or Dry Kilns Standard Gauge. Capacity 5 to 7 tons, will sell cheap to a quick buyer.

Also New and Re-laying rails from 12 to 60 lbs. with Fastenings.

Review of Current Trade Conditions

Ontario.

The Georgian Bay district trade is quiet though showing signs of gradual improvement. Good grades continue in fair demand. Enquiries are quite numerous and mail orders are coming to hand steadily. Prices at Toronto are firm, although there is only a medium amount of business. The mills which supply central Ontario are pretty well stocked with lumber and no decided price improvement is expected. British Columbia cedar shingles are firmer at Toronto, and XXX, XXXX XXXXX have advanced 15 to 20 cents. Present prices are causing buyers in the Ottawa valley to hold off. Red pine and spruce especially are considered too high. The dull state of the British market is also an influence in the direction of lower prices. White pine lath are in firm demand prices being 25 cents higher than in the early winter. Prices are reported to be stiffening in western Ontario. The spring building demand is partly accountable for this and an important factor is the general improvement in the condition of stocks which has been brought about by careful business methods during the past year. Altogether there is a promising outlook at present. At Sarnia prices have advanced about \$2 for most grades and about \$4 for some of the scarcer ones, such as No. 1 cuts 2-inch. A Toronto hardwood dealer who recently returned from a visit to the Southern States reports a scarcity of quarter-cut oak. In other lines, however, there is a tendency to smash prices. Dealers do not seem to care about profits so long as they make sales. The lower grades of quarter-cut oak are not in good demand. There seems to be a great deal of it on the market and everybody wants to sell. The prices are lower than they have been for some time. In Ontario, dealers expect an improvement in the demand for hardwoods. It is not likely to come quickly, however, but slowly and surely.

Eastern Canada.

The lumber trade at St. John, N.B., has shown considerable improvement during the last two weeks. Present indications are that the spring floods will provide ample water for good drives. Manufacturing is increasing and two mills have recently commenced operations. This makes five in all now working. Nearly all the St. John shingle mills are also producing and it looks as though the coming summer will be an active one in the shingle business. Prices at present are about \$2.85 to \$2.95 per thousand for "extra" cedar shingles, and \$2.35 to \$2.45 for "clears," f.o.b. St. John for dutiable. Stocks of high grade cedar shingles are low. The uncertainty in connection with the United States tariff is having an effect upon the lumber business in general, but this, it is hoped, will disappear shortly. The spruce deal trade with Great Britain is quiet and stocks are light. Prices are at about \$14.50 to \$15 for "English" spruce f.o.b. St. John. There has been a better demand for spruce in New York recently than for a long time past. Prices are fairly strong and stocks are light. At Boston the market for spruce has also developed more strength and higher prices are more generally asked. Spruce frames 9-inch and under are quoted at \$1.25, and sales have been put through at this figure. There is not much call for random but prices are slowly improving. Boards are in moderate demand and prices are firm. The demand for shingles at Boston is not large but prices are fairly steady. The best cedar extras are quoted at \$3.90 to \$4. There is not much business being done at the higher price. The demand for lath is moderate. For $\frac{5}{8}$ -inch the prices asked range from \$3.90 to \$4 and for $\frac{1}{2}$ -inch from \$3.50 to \$3.60.

Great Britain.

There is little sign, in London, of the long wished-for revival of trade. Business seems to be growing duller instead of improving. There is,

however, a fair amount of forward buying still in progress in some quarters, although in others, merchants complain of buyers being indisposed to increase their holdings. Spot goods are firm with a tendency to advance in some favorite sizes. The deliveries from all docks are still disappointing. At Foy, Morgan & Company's auction sale, on March 31st, 3x9 and Quebec spruce and regulars varied from £10 10s. to £10, the 11-foot bringing £9 10s. and 4th regulars £8 15s. 3x10 1st Quebec pine regulars made £21 10s. and £21 5s., the 9-inch going at the same prices, the 8-inch at £20, and 7-inch at £19 10s.; 2nd quality 10-inch brought £19 5s., 9-inch £18 5s., 8-inch £18 5s., and 7-inch £18. A long line of 4th Quebec 3x11, 16 to 9 feet, went to one buyer at £12 5s., and he also secured the 9-inch and 10-inch at £11, the 7-inch and 8-inch making an average of £10 15s. Unsorted British Columbia pine in 3x12 to 6x16 made from £12 10s. to £13 10s. At Liverpool the trade is still monotonous and dull. It is hoped that a recent improvement in the cotton markets and in other industries will cause an improvement in the timber trade. Spruce deals from New Brunswick and Nova Scotia are arriving only in small quantities and are selling on c.i.f. terms at unchanged prices. The market still remains firm and there is a probability of better prices for futures. It is expected that higher prices for futures will be one result of the new United States tariff, which will create a better market in the States than in Great Britain. There is a good demand for 3x6 and 2 $\frac{1}{2}$ x7. Shippers are reported to have overdone the shipment of 4x4/6 scantlings. Prices for birch planks are advancing slowly but surely, and the demand shows signs of improvement. Stocks consist principally of 3-inch and there is a scarcity of 2 $\frac{1}{2}$ -inch. 2-inch are also becoming scarcer. At Manchester, trade conditions are no better. The Manchester liners resumed their weekly service on April 15th, between Manchester and Montreal and Quebec. Three fixtures for spruce are reported for the coming season, namely, 1,400 standards per steamer from St. John; 1,600 standards per steamer from Grindstone Island, and 600 standards per sailing vessel from Pugwash. Although trade is not by any means brisk, some reports state that it shows signs of improvement. Orders are certainly more numerous and some merchants believe that the turn of the tide has been reached. At Cardiff, imports are very light and the yard trade is improving. Spruce is getting rather short in stock, especially 9-inch and wider sizes, and prices show a tendency to advance. At Bristol there is very little demand for wood. Spot prices are offering good inducements for sawn woods, but buyers stick to a hand to mouth business. A more or less dull tone prevails at Glasgow, and orders are extremely scarce.

United States.

The preparations of the retail yards in the United States for the coming season's supply is having a good effect upon the lumber business. Most of the yards have already sold quantities of lumber which have not been delivered. With better weather and improved roads this will be changed and retail yards will show many gaps which will have to be filled up. At New York, wholesalers report a better demand for straight lumber business than has prevailed for some time. Although trade is not booming, the character of the buying is good, particularly from the suburban sections. This refers especially to northern pine, for which prices are irregular, but stocks are not urgently pressed for immediate sale. At Buffalo it is expected that the next month will be an active one among white pine dealers as stocks are lower than they ever were and shipments will commence to arrive as soon as navigation opens on the lakes. The feature of the trade at present is the demand for box lumber which formerly had been quite quiet. The demand for hemlock in New York is dull. In Chicago it is somewhat improved, though trade is not active.

Upper grades are firm. At Chicago there is a slight demand for fir casing and also for tank stock. Fir timbers, however, cannot compete there against yellow pine, the prices for which are causing a great deal of discussion in the market. Red cedar shingles at Chicago are in an unsettled condition. There is a strong demand, and the supplies at the mills and transfer points are light, so that in a short time it is expected that prices will go higher. White cedar shingles show no change. No. 1 and No. 2 white pine lath at Chicago are in light supply. No. 1 hemlock lath is in good demand and No. 2 in poor demand. At Buffalo the shingle trade is quiet but prices are firm, owing to the small amount now in transit. There may even be a shortage of red cedar at Buffalo if the demand increases before the lake and rail shipments commence to arrive. White cedars are quiet. Cooperage business at Chicago is very dull. Orders are scarce and coopers are running on half time. Stocks are ample for the light demand, which will probably continue light until June, when the run of hogs will make a better demand. The offerings of slack staves are moderate with little change in price.

Market Correspondence

Buyers are Shy in Ottawa Market.

Ottawa, April 11.—The Ottawa valley lumber trade is marked by a disinclination on the part of purchasers to make contracts at the prices demanded by manufacturers. Buyers are asking for reductions on spruce and red pine as compared with quotations of a year ago. Although one big sale of red pine has been made at last year's figures, nearly \$19 per thousand, it appears that not more than \$17 and \$18 is offering for this sort of lumber in some quarters. Sales of spruce have been made at \$16 per thousand log run, mill culls out, and the price is not very strong at that figure. Exporters to the British market say there is every reason for a decline in all last year's prices, judging from the prospects of the coming summer. Apparently if present quotations are maintained they will owe their strength to home consumption more than to foreign export. The chief shippers to the British market expect to begin loading barges on April 26th or 27th. There is enough lumber on hand of the 1908 cut to keep them going until the middle of July. Although sales and orders with them are fewer than at this time last year the moving of lumber from the yards of the Ottawa valley will not reflect the dull situation. The white pine market is without any noticeable feature except in the line of lath. With ever increasing demand during the last couple of months the stock of lath has been greatly reduced and manufacturers are getting a 25-cent advance on early winter prices. The outlook for building activity is so favorable that the lath market is expected to remain buoyant during the summer. Although the popularity of brick and cement building material diminished orders for lumber from many quarters there has been no substitute for lath. The number of building permits issued in Ottawa during March was in excess of the corresponding month for nearly any other year, a very healthy sign for local trade in all branches of the lumber industry.

A recent report to the Department of Trade and Commerce stating that importers in Belfast, Ireland, are obliged to procure all their pine doors from the United States was of especial interest to Ottawa in view of the large sash and door factories operated by Davidson & Thackeray and the W. C. Edwards Company. Mr. Gordon Edwards, manager of the latter, explains that the enormous production gives the Americans an advantage on the export trade. They can undersell the Canadians. Besides, the inferior quality they put on the market draws custom.

The Upper Ottawa Improvement Company which a year ago was severely criticized by the Ottawa "Journal" for allowing logs to partially sink and become "dead heads" in the Ottawa valley and other logs to lie strewn along the shores, is being criticized again by the Ottawa "Citizen" on the same ground. A new phase of the situation is the contention that if logs were subject to confiscation a couple of years after being cut, owners would be more particular not to leave them lying along the streams. Manufacturers are almost unanimous in asserting that this would be a preposterous plan and would only open the door wider to the theft of logs, which already is too common. The partial sinking of logs with one end left just at the surface of the water is annoying to boatmen, but the management of the Ottawa drive maintain that the nuisance is scarcely possible to wipe out altogether and that only a fractional percentage are lost in that way. From present indications the Ottawa drive will be conducted more expeditiously than usual this year. In addition to the new steel tug ordered, expensive river improvements are under construction at Quyon. Some heavy British Columbia timbers have been procured for this work. The tolls to be charged vary a little at certain points from last year. The tariff for sawlogs coming through Quinze boom is reduced from 30 cents to 10 cents, due to the larger volume that will be handled there in the season of 1909. Additional expense has to be incurred at the booms from the head of the Deschenes to the Hull slide and the tariff has gone up from seven to seventeen cents

on sawlogs, 17 feet and under, and from 23 cents to 30 cents on other timbers.

J. R. Booth reports that it is probable his mill will begin the last week of April, as is the usual custom. Excellent progress is being made on his new power house, where 400 men are employed providing a station for the development of electrical energy for his paper and allied industries. It is not expected he will draw on this plant for motive energy for the sawmill as the new Chaudiere dam will provide abundant power for the lumber mill at a cheaper cost. He is manufacturing 50 tons of pulp every day, compared with 20 tons early in the winter when low water threw nearly all the grinders out of operation.

Activity Increasing in New Brunswick.

St. John, N.B., April 10.—The past fortnight has been marked by considerable activity in all phases of the local lumber trade and industry, there being more life in manufacturing circles, in trading and particularly in logging circles. On the latter phase of the business the interest of New Brunswick lumbering people is centred at present, as upon the developments of the next four weeks will hinge the quantity of output of the mills during the coming sawing season. So far all conditions seem to indicate that the stream driving season will be a successful one. The snow in the woods at the headwaters of the rivers has melted very little, if at all, and it is expected that when it does begin to go there will be a head of water that will enable the drivers to make clean drives. Of course there are many conditions which may yet arise to offset this forecast, but the above is merely using the existing conditions to set forth the probabilities. In some sections along the head waters of the St. John the hauling roads are still in first-class condition and the lumbermen are still hauling to the brows. The logging season is, however, practically at an end and the crews are making ready for the stream driving.

In manufacturing circles considerable stir is apparent and two mills have begun sawing during the past fortnight, making in all five of the larger mills which are now sawing regularly. In trade circles considerable activity is manifested, particularly in short lumber. As nearly all the most important local shingle producing plants are sawing, the output of this new line at this port is practically the same as in mid-summer, although the mills situated at inland points are still idle and will be until the ice is entirely out of the rivers.

It would seem, judging from all indications, as if the present year will fully equal the past year as far as prices on the high grades of cedar shingles for export are concerned. Holdings of cedar shingles at all the chief manufacturing centres throughout the provinces are materially lower than was the case at this time last year. Aside from the output of the St. John mills (which was greatly curtailed because of a strike among the operatives) the output of the provincial mills could not be increased over that of last year, inquiries are quite as plentiful as in the spring of 1908 and the feeling generally on the part of dealers and manufacturers in this direction is one of decided confidence. At present writing an inquiry of any of the local manufacturers would meet with a quotation on "Extra" cedar shingles of from \$2.85 to \$2.95 per thousand, and on "Clears" of from \$2.35 to \$2.45 per thousand, f.o.b. St. John. These figures would apply to the dutiable article. At present writing local stocks of high grade cedar shingles would be less than two millions and there is no single stock of sufficient dimensions to make up a schooner's cargo.

Just at the present time there is a perceptible feeling of uncertainty on the part of both buyer and seller of any line of lumber for export to the United States, an uncertainty which is due to the unsettled condition of affairs caused by the proposed adoption of the Payne bill, with its sweeping changes in the tariff on long and short lumber. It is only a matter of days until the matter is settled one way or the other and the uncertainty will, no doubt, disappear when that settlement is effected.

Local trading in spruce deals for export to Great Britain is of a very quiet nature. Local stocks of this line of goods are, no doubt, lighter than is usual at this time of year; between six and seven millions of superficial feet would cover the total quantity. The quiet condition of trade is, no doubt, largely due to the lack of anxiety on the part of local people to sell out to any great extent for future delivery. While such as have expected any sudden rise in prices of "English" deals have been disappointed, this line has continued firm with a steady improvement in tone and in local demand. As nearly as it is possible to gauge the situation by a general price it may be said that the local market value of "English" spruce is from \$14.50 to \$15 per thousand superficial feet, f.o.b. St. John. While these figures have unquestionably been exceeded by some special lots which have gone forward by the liners, such cases could not be called indicative of the true situation.

Fort William operators report that they have had the best season on record for getting out ties. Since November the weather has been splendid. The cold was not severe, the hauling was exceptionally good, and the timber taken out has been well up to standard. Ties are selling at 40 cents, or about 2 cents less than last year, as the C.P.R. already have a large supply. The makers were paid \$35 a month and board.

Nelson Lumber Business Growing Active.

There is a decided improvement in the lumber business at Nelson, B.C. and vicinity. The mills of the Yale-Columbia Lumber Company in Nelson commenced running on April 1st, and gave employment to over 50 men. This mill is supplied with logs from the company's camp near Porthill on the upper Kootenay river, which is now practically clear of ice. The Westley mill, belonging to the Yale-Columbia Company, has been running at full pressure for the past month, and the Cascade mill will be in operation soon and will employ 600 men. Over 250 men will be employed at the company's mills and camps within a few days and the production of lumber will be about 160,000 feet per day. The company has altogether four tugs plying on the Kootenay and Arrow lakes. Within the next few days one of them will tow down to Nelson a boom of 200,000 feet of logs from Rykert's Siding for use at the mill.

Fred Estey, of this company, speaking of the prospects of the industry during the season, said that the company was at present shipping a considerable quantity of lumber and that he felt highly optimistic as to the prospects of the coming season. Business was steadily picking up, and in two or three months there should be a noticeable rise in prices.

A. G. Lambert states that although only a few men are at present working at his mill at Taghum, a boiler was being constructed for the purpose of increasing the available power and he expected to shortly have a staff of from 25 to 30 men employed there. Mr. Lambert also speaks favorably of the prospects of the coming season and says that he expects to make some big sales before July. Some 2,000,000 feet of lumber will be produced from Mr. Lambert's camp this year.

The Patrick Lumber Company also report considerable activity. Three camps a few miles above Slocan city have been steadily at work since the early fall, and the company's big mill at Crescent Valley will be in operation within a month, employing from 80 to 100 men. Mr. Joseph Patrick states that the prospects for the coming season look better than they have for some years. There is evidence of the present large demand in the prairies being greatly augmented within the near future. Mr. Patrick points out that the prairie provinces are British Columbia's natural market for lumber and that the prices depend very largely upon the conditions prevailing there.

New Brunswick Lumbermen Seeking Changes.

At a recent meeting of representative lumbermen held at Fredericton, N.B., a committee of five was appointed to prepare a memorial to be presented to the Government recommending some changes in the timber regulations. Hon. J. P. Burchill presided, and among others present were Henry Hilyard, J. F. Gregory, St. John; Sheriff O'Brien, of Nelson; F. M. Anderson, Campbellton; T. M. Burns, Bathurst; John Maloney, D. J. Buckley, Rogersville; Allan Ritchie, Newcastle; Randolph Crocker, Millerton, and A. H. F. Randolph, Fredericton.

There was some discussion in regard to surveyors appointed by several municipalities, and the meeting seemed to be of the opinion that the Government should require them to qualify for their work. The question of providing a more efficient system of fire protection was discussed. In regard to limit holders, the opinion was expressed that on the expiration of a lease they should be paid by the Government for any improvements which they had made. Recommendations in regard to lease matters will be embodied in the memorial. The committee is composed of Allan Ritchie, F. M. Anderson, Henry Hilyard, A. H. F. Randolph and John E. Moore.

The A. J. Burton Saw Company, Limited, of Vancouver, have recently increased their capital from \$75,000 to \$150,000 in order to provide for extensions to their plant, which the rapid growth of their business, of late, has made imperative. Among recent orders filled by this company, is one for the supply of the entire equipment of saws for the plant of the Davidson, Ward Lumber Company, at Loughborough Inlet. This order included over 70 shingle saws alone. The balance of the order of 120 saws, being intended for use in their circular sawmill. The order also included three automatic Hanchet circular saw sharpeners, besides hand machines and other tools, making up the entire filing room equipment.

It is reported from Winnipeg that J. D. McArthur has purchased two lumber yards belonging to the Keewatin Lumber Company. One of these is situated at the corner of Sutherland avenue and Austin and the other is on Wall street. It is understood that the Keewatin Lumber Company will retire from the Winnipeg field. In the two yards there are at the present moment about 2,000,000 feet of lumber. The capital in the yards has been held mainly at Ottawa and the chief interest has been that of Senator Gibson, to whom Mr. McArthur is said to have paid \$50,000 cash for the properties.

Mr. McArthur will operate his newly acquired yards in connection with those he already controls. Counting the two new ones Mr. McArthur has now nine yards in Winnipeg. He anticipates a big demand for lumber this season at firm prices and is preparing for active operations. Hitherto his Winnipeg yard accommodation has been insufficient.

Why the Dunbar Shingle Machine Makes and Saves Money

It cuts and turns out a much larger number of shingles than other mills under the same conditions.

Its strength and simplicity eliminate three great evils, viz: "delays, repairs and saw-hampering." Your men waste no time in idleness.

Users testify to a capacity of from 15,000 to 21,000 shingles per day. That will certainly keep any crew of operators busily engaged.

It requires no expert or high priced workman as an operator. "The Dunbar" is in such common use and is so well known that the great majority of mill-men know how to use it to good advantage.

Blocks cut on our machine are cut with such evenness and finish that the smallest possible amount of stock is wasted in sawdust and refuse.

After all it is the TOTAL SAVING and the TOTAL WASTE in which you are interested.

The E. Long Manufacturing Company, Orillia, manufacturers of sawmill machinery, etc., propose to make some large extensions to their factory.

The Parry Sound Furniture Staples Company, Limited, Parry Sound, Ont., propose to erect a box and basket factory near St. Catharines, Ont.

The Virginia & Rainy Lake Lumber Company, of which the authorized capital is \$20,000,000, will erect, among others, a large sawmill at Fort Frances, Ont.

John S. Porter, general manager of the Loveland-Stone Lumber Company, Thessalon, Ont., reports that the winter has been a favorable one for logging, and that the company has secured a full stock.

Fisher, Pollock & Henry, proprietors of the Drayton saw & planing mills, Orangeville, Ont., have dissolved partnership. Mr. Geo. G. Fisher drops out and a new firm has been formed composed of P. Pollock and O. B. Henry.

Graves, Bigwood & Company are planning to start their sawmill at Byng Inlet, Ont., about April 15th, but it will all depend upon the state of the weather. Altogether the last winter has been favorable for logging operations.

The Pigeon River Lumber Company's mills at Port Arthur, Ont., which have been closed since November last, are now running again, with enough logs in sight to keep the plant going until next winter. About 300 men are employed.

The Ben Hur Truck Company, Hamilton, Ont., has been incorporated; capital, \$20,000; to manufacture hand trucks, furniture, boxes, metals, plated ware, wheels, etc. Incorporators, F. R. Close, W. M. Findlay, T. A. Henderson, C. H. Snyder, all of Hamilton.

The Powell Lumber & Door Company, Limited, Toronto, capital \$50,000, has been granted a charter to take over the business carried on in that city by the Rathbun Company. Provisional directors are: Fred W. Powell and C. B. Dougherty, of Ottawa, and J. H. Dougherty, Toronto.

The Trusts & Guarantee Company, Limited, liquidators of the Cornwall Paper Manufacturing Company, have sold the plant and machinery of the defunct company at Mille Roche for about \$95,000. The purchasers are the St. Lawrence Paper Mills, Limited, whose shareholders are principally Americans.

The William Milne Lumber Company, incorporated by A. Blanchard, J. D. Shaver and M. Clapham, of North Tonawanda, with a capital of \$5,000, will handle the output of William Milne's mill at North Bay, Ont. This mill cuts about 6,000,000 feet of white pine. It is understood that the stock will be handled over the docks of the C. B. Lentz Lumber Company.

An action recently came before Mr. Justice Clute, Toronto, in which Paul F. Bolton, a carpenter of York County, claimed damages against the Gilmour Door & Sash Company, of Trenton, for using a certain woodworking machine for matching lumber, on which the plaintiff claimed to hold the patent rights. The plaintiff also asked for an injunction restraining the firm from any further use of the machines, and an order that the machines be handed over to him. For the defence it is claimed that the Gilmour Company secured rights many years ago before the plaintiff bought the patent.

An enquiry by Royal Commission has been commenced at Fort Frances, Ontario, into the charges against the Fort Frances Lumber Company and its officials for making alleged fraudulent returns to the Crown Lands Department by falsifying the scale sheets. The charges are preferred by James Johnston and the investigation is being held by Samuel Price. Mr. W. A. Preston, M.P.P., president of the company, and Mr. Johnston were both absent, the former in Toronto on business and the latter being confined in a hospital. An adjournment was made until April 17th, after one or two witnesses had been heard.

Guy Moulthrop, of the Moulthrop Lumber Company, operating a sawmill at John Island, in Georgian Bay, reports that the winter has been fairly good for logging. The output of logs in the district is about 70 per cent. of the usual crop, but a large number are being carried over and with one or two exceptions all the mills will have a good stock. Nearly all the lumber on the mill docks in that district has been sold. The Nesters have some unsold stock at Thessalon, but the Moulthrop Lumber Company at John Island, Loveland & Stone at Cutler, the Morgan Lumber Company and Michigan Land & Lumber Company, the Little Current Lumber Company, Spanish River Lumber Company, and a number of other concerns have cleaned up their old stock. He says further that 80 per cent. of the cut of the mills in the district for this year already has been contracted for. His concern has sold its entire cut up to September. The hardwood lumber industry is doing fairly well and there is a fair movement in small lots. A few good sized contracts have been made. Nearly all the sawmills are in operation. Stocks of lumber are not heavy and prices are fairly good. In the lower peninsula stocks of hemlock in dealers' and manufacturers' hands are smaller than usual.

Eastern Provinces

The Dawson Lumber Company's mills at Yarmouth, N.S., have resumed

The Lewis Miller Company will build a large sawmill at Jordan Falls, N.S.

W. H. White has erected a plant at Lachine, Que., for the manufacture of taps, bungs and spiles.

The Chas. A. Pacquet Company, capitalized at \$500,000, proposes to erect a large woodworking plant in the city of Quebec.

The Thomas Nagle Lumber Company, Limited, St. John, N.B., capital \$49,000, has been chartered to carry on a lumbering, milling and woodworking business.

The Austin Lumber Company, Limited, Cap St. Ignace, Que., capital \$95,000, has been incorporated to take over the business of the Austin Lumber Company, and manufacture lumber.

The winter's logging operations on the St. Maurice river, Que., have been most successful, and there has been a big output, some 5,500,000 logs giving about 165,000,000 feet, having been cut.

La Compagnie Etienne Dussault, Levis, Que., have been incorporated with a capital of \$150,000, to build wharves, operate saw and planing mills, etc. E. and Horace Dussault and Gerald Gorman, Levis, Que., are charter members.

La Compagnie Lebel & Forgues, Limited, St. Louis, Que., have been granted a Quebec charter to take over the business of Lebel & Forgues at that place, manufacture lumber, operate planing mills, etc. Capital, \$49,000.

The lumbering and milling property on the Pokiok river, belonging to Gilman Bros., & Burden, has been disposed of to a New York syndicate. It consists of a large sawmill fully equipped with modern machinery and 18,000 acres of splendid timber land.

A toothpick mill, operated by the Hull Woodenware Company, Limited, was started in February. The company is capitalized at \$40,000. The expectation is to produce 1,000,000,000 toothpicks a year, or about 3,000,000 a day, which totals 6,300 boxes a day, costing \$58.75.

British Columbia

Gray & Shields, Vancouver, have bought Thomas Kerr's shingle mill at Pitt River, B.C.

W. E. Walsh has leased the old cannery at the end of Third avenue, Vancouver, and fitted it up with the latest machinery, as a sash and door factory.

Adrian Papineau, of Papineau Bros., sawmill owners, Fort Alexander, Man., was straightening a log in the skidway recently, when slipping, an 18-foot log struck and killed him.

A large sawmill may be erected at Harrison Lake, on the C.P.R., or at Vancouver, as a result of the recent purchase by C. S. Battle, of Vancouver, of some 48 square miles of timber in the Harrison Lake district, B.C., from Davidson Brothers and others of Vancouver.

The Brooks-Scanlon, O'Brien Company have awarded contracts for building a short railway from salt water at Stillwater Bay to Gordon Pasha Lake, B.C., through a heavily timbered fir country. It is not the intention of the company at the present time to do more than sell logs on the market, though ultimately they will erect a mammoth sawmill, where the logs will be manufactured for Canadian and export trade.

E. J. Fader, of New Westminster, has begun the manufacture of an improved logging appliance which will be operated by a donkey engine. The improvement consists of an endless cable revolving on a double drum and wrapped a sufficient number of times to prevent slipping. The inventor claims that by the use of this machine logs can be hauled from any part of the woods and even from the top of a mountain. The endless cable does away with the haul-back and is expected to be a boon to loggers in other ways.

The Fraser River lumber mill, New Westminster, B.C., has orders for the delivery before September next of over 12,000,000 feet of lumber and timber. Of this amount, seven and a half million feet is for the Grand Trunk Pacific Railway. The Rhodes Curry Company, of Amherst, N.S., which firm constructs railway cars, have placed orders for one and a half million feet, while the Ottawa Car Company want three-quarters of a million. Besides these large amounts, there are orders in hand from Regina and the territory west for 3,500,000 feet, exclusive of shingles and factory products. A notable feature in connection with the operation of this mill is that, large as it is, Oriental labor is being dispensed with, and one day recently 133 Asiatics were replaced by white men.

Among the recent incorporations in British Columbia are the following: Michigan Pacific Lumber Company, Limited, registered as an extra provincial company, capitalized at \$1,500,000, shares \$10 each, head office of the company is at Grand Rapids, Mich., head office for British Columbia, 114 Langley street, Victoria, B.C.; Mr. W. J. Taylor is barrister for the company. Gaffney Timber Company, capitalized \$250,000, shares \$1 each, incorporated to carry on a sawmill business in the province. Canadian and Foreign Commission and Export Company, Limited, capitalized \$20,000, shares \$100 each, incorporated to carry on a commission business and manufacturing of lumber; S. A. Skead, manager, 216 Crown Building, Vancouver, B.C. Converse-Brown Shingle Company, Limited, capital \$10,000, shares \$1 each, incorporated to carry on a shingle and lumber manufacturing business. Pacific Shingle Company, Limited, capital \$10,000, shares \$10 each, incorporated to own and operate a shingle mill at Westminster Junction; Mr. Geo. D. LaMont & Brothers, of New Westminster, are connected with this concern. Keystone Lumber Company, Limited, capital \$50,000, shares \$100 each, incorporated to carry on business of timber merchants and lumber manufacturers; Mr. John A. Smith, of Vancouver, Manager. Edinboro' Timber Company, Limited, capital \$200,000, shares \$100 each; Mr. John A. Smith, of Vancouver, manager. Pacific Slope Lumber Company, Limited, capital \$200,000, shares \$100 each; Mr. John A. Smith, of Vancouver, manager. Yellow Cedar Lumber Company, Limited, capital \$500,000, shares \$100 each; Mr. John A. Smith, of Vancouver, manager. Hillis Timber & Trading Company, Limited, capital \$25,000, shares \$100 each, head office Promis Building, Victoria, B.C.; Mr. Percy D. Hillis, manager. Flewin & Sons, Limited, capital \$50,000, shares \$100 each, incorporated to operate a mill at Port Essington, B.C. North-West Trading & Timber Company, Limited, capital \$250,000, shares \$1 each.

DeLoach "Prince" Hand Feed Shingle Mill

JOHN H CRANE
Manufacturer of Lumber and Shingles
DELOACH MILL MFG. CO.,
BRIDGEPORT, ALA. MONTEREY, ALA., JULY 2, 1907.

GENTLEMEN,—I purchased from you in 1905 a "Prince" hand feed shingle machine. I have operated it and find it all you claim for it. We cut at the rate of 30,000 shingles in 10 hours and made first class shingles. I consider your machine a very light running machine. If I wanted another hand machine I would certainly buy a DeLoach Prince.

With best wishes for your success, I am

Yours very truly,
JOHN H. CRANE.

Send for Catalogue of Engines, Boilers, Gasoline Engines, Saw Mills, Shingle Mills, Planers, Gang Edgers, Lath Mills, Grinding Mills, Water Wheels, Etc. Complete Circular and Band Mill Equipment.

EVEN THE UNTUTORED SAVAGE,
in all ages and all climes, knew that when he blew on the newly-kindled
or reluctant fire

IT BURNED BETTER.

From time immemorial the blacksmith at work at his forge has stimu-
lated the fire with a pair of bellows.

The founder would find it impossible to melt iron in his cupola without
a blower to promote the combustion of the coke.

In short, wherever it is necessary or desirable to generate an INTENSE-
LY HOT FIRE,

A BLAST IS USED.

If you desire to increase the efficiency of your boilers—

If you cannot burn wet, green or frozen sawdust or other refuse satis-
factorily—

If there are days when you lack steam, on account of weather con-
ditions—

Learn from the savage, the blacksmith and the founder, and put in the
old reliable

Gordon Hollow Blast Grate

It is no experiment. It has been on the market for twenty years. There
are over 6000 sets in daily use. We have over 600 voluntary testimonials.

Above all,

WE SELL ON APPROVAL,

giving thirty days in which to thoroughly test the outfit, and paying the
freight both ways in case of rejection.

Saves labor in firing.—Lasts forever. Only expense first cost.—Equally
efficient in ordinary furnaces or Dutch ovens.—Adapted for any number of
boilers, from one up.—No change in construction necessary. A hole must be
made through each wall, for the pipe; aside from this, not a brick need
be disturbed.—The largest outfit can be installed between quitting time Satur-
day and starting-up time Monday morning.—No difficulty about maintaining
a fire at night, when the blower is idle, and no objection to so doing.

"THE DUNBAR"

New and Improved

STEAM LOGGING ENGINES

Best on the Market

This is the machine for which we claim all the good Qualities possessed by any other
 and a great many valuable improvements besides.

This time we wish to call your attention to one of many important points which prove conclusively the superiority of the **Dunbar Logging Engines**: that of the Hydraulic Apparatus for raising and lowering the Boiler, an invention of our Mr. Dunbar, Sr. (for which patents are pending). By this device all danger from rush of water to either end of the Boiler, caused by irregularities of the road, is avoided. One of the most serious drawbacks in other Engines is the fact that the Boiler is stationary on the frame, consequently a source of great anxiety because of the danger to both the Crown Sheet and the Tubes. You can readily understand that in going up or down hill either the Crown Sheet or the Tubes are bared, causing them to become so heated that they will leak badly, and after repetition for a time the Boiler will be practically ruined.

This improvement, which supersedes our previous method for raising or lowering the boiler, has been added since cut herewith shown was made.

Should you contemplate putting in a Logging Engine we shall be glad to take the matter up with you and give you all particulars.

Quotations for Logging Sleds furnished.

Write Us for Particulars

The Alex. Dunbar & Sons Company
 Woodstock, N.B. Limited

There are more DISSTON BRAND Band and Circular Saws used than any other make, and by a large majority.

WHY?

Because millmen and sawyers recognize by the use of the DISSTON SAWS they obtain the greatest results for the least cost.

WE MAKE THIS STATEMENT WITHOUT FEAR OF SUCCESSFUL CONTRADICTION.

POINTS OF MERIT

**MATERIAL
HARDENING
AND
TEMPERING**

FINEST
CRUCIBLE STEEL

DISSTON
METHOD

GRINDING

DISSTON
METHOD

TENSIONING

DISSTON
METHOD

UNIFORMITY.
TOUGHNESS.
GREATEST TENSILE STRENGTH AND ELASTICITY.

Being Manufacturers of our own steel, and thoroughly familiar with its makeup, we are able to absolutely adjust the hardening and tempering processes to the degree giving that perfect combination of hardness and toughness that produces the "edge, tension-holding and standing up qualities" for which the DISSTON SAWS are renowned.

By the DISSTON METHOD all Band Saws are ground perfectly flat and uniform in thickness, thus making possible a very close adjustment of the guides without creating any friction or heat when in operation at the highest rate of feed; and all Circular Saws, whether tapered or of even thickness, are perfectly flat ground on the surface, thus insuring in all saws perfect clearance and true balance.

The uniformity of the material, temper and grinding is a large factor in the proper adjustment of tension; and this, together with the Disston process of tensioning, is the reason why the DISSTON SAWS will manufacture more lumber, under the same conditions, than any other brand of saw.

In the DISSTON BRAND of SAWS you have the advantages of the product of a progressive, up-to-date saw factory, the LARGEST IN THE WORLD, and where saws are made throughout, from the making of the steel itself—the superiority of which has been demonstrated for the past fifty-three years—to the finishing operation, and each process is performed by mechanics of long experience and highest order of skill.

The Madison Williams Manufacturing Co., Limited

IT WILL PAY YOU TO INQUIRE INTO THE MERITS OF OUR

New Tie or Log Siding Machine

It slabs both sides of the logs accurately and rapidly at the one operation. Both saws movable to or from the centre simultaneously by means of a lever within the sawyer's easy reach, and the spacing indicated on a quadrant in plain sight. This machine will cut over 3,000 ties in ten hours. In any mill using a Gang, this machine, if used for preparing the cants, will increase the output 20%. It is a compact machine, strongly built, as the cut indicates, to withstand hard and continuous usage. It is without an equal, let alone a superior, in this line, because it meets the requirements perfectly. Let us have an opportunity of sending descriptive matter, and price.

R. H. SMITH CO., Limited

— St. Catharines, Ont. —

We are the Sole Manufacturers of Saws under the **Simond's Process** in the Dominion of Canada

There is no process its equal for tempering circular saws. Other makers recognize this fact, as some of them, in order to sell their goods, claim to have the same process. **All such Claims are FALSE**, as the patentee in the U. S. and ourselves are the only firms in the world who use it.

INSERTED TOOTH SAWS

Notice the improved shank. We call particular attention to the swell which strengthens it at the weakest part and which gives it more wear than the old style.

Shanks made in usual gauges and to fit your saws perfectly.

SHINGLE SAWS

The quality of the "Simonds" Shingle Saws is proven by the fact that the largest shingle and machine manufacturers in Canada are using them.

Run a "Simonds" and you will increase your output.

CROSS-CUT SAWS

THE "NARROW LEADER"
REFINED SILVER STEEL.

The Simonds Temper and style of tooth make the "Leader" the fastest and easiest cutting saw manufactured.

Safe, Reliable and Efficient

When you select Shimer Cutter Heads you get more than a mere assembling of materials. You get an outfit that combines the skill of the expert workmen, the most approved mechanical features and years of experience.

THE SHIMER CUTTER HEADS are made of Steel that is forged and hammered into dies. We use this material because of its close grain, uniform solidity and dependable strength. Machines to-day carry faster feeds; the spindles in them run at greater velocity; the Heads must sustain increased working strain as well as to overcome the power of centrifugal force. Metals from which Cutter Heads are made must be stronger, tougher and more firm in grain and texture to successfully meet requirements of to-day.

Let us send you full particulars about the later makes of Shimer Cutter Heads—how they can be expanded to suit different thicknesses of material in an instant—how they will save you all the "fitting and trying"—how they will remove many of the annoyances which come up daily.

Our Catalogue and Pattern Book contains 200 pages of Cutter Head information which we are pleased to mail on request.

Some of Our Steam Set Works

Because they are great money-savers, you will put them in your mill sooner or later.

They are easy to install and you can connect them to your carriage any time without much trouble.

They will positively increase your output, will help you cut better lumber, and make your setter's work easier.

Two Inch Steam Setter.

They are of unquestioned value to their present users—and they are now working successfully in more than three hundred mills.

The Two Inch Machine will set for any thickness up to 2 inches with one stroke of the lever, and the Four Inch Machine sets up to 4 inches at one stroke.

If you would like to know more about them, send for our catalogue.

**Remember we make everything
for a Saw Mill**

A Suggestion — To the Trade!

We believe that the Lumber Trade in the Prairie Provinces and Ontario will make a mistake by not stocking up as heavily as possible with British Columbia Lumber and Shingles at present prices—which are **very low**: in fact lower prices with \$10.00 to \$11.00 logs, and \$5.00 to \$5.50 shingle bolts, are an impossibility.

A **word** to the **wise** should be sufficient. Send us your order.

TWO THINGS are mainly responsible for the success of
Our High Grade

Long Leaf Yellow Pine

First: We secured the necessary and adequate supply of
the **best Long Leaf Yellow Pine Timber** in the south.

Secondly: We applied modern facilities to manufacture
and shipment.

THE NATURAL RESULT HAS BEEN SUCCESS

Special attention is being given to our rapidly growing
Canadian trade.

We are in a position to get out timbers up to 36 feet
in length and surface sizes up to 6 x 12. All timbers
larger than 6x12 we can arrange to have dressed in transit.

Why the Dunbar Shingle Machine Makes and Saves Money

It cuts and turns out a much larger number of shingles than other mills under the same conditions.

Its strength and simplicity eliminate three great evils, viz: "delays, repairs and saw-hampering." Your men waste no time in idleness.

Users testify to a capacity of from 15,000 to 21,000 shingles per day. That will certainly keep any crew of operators busily engaged.

It requires no expert or high priced workman as an operator. "The Dunbar" is in such common use and is so well known that the great majority of mill-men know how to use it to good advantage.

Blocks cut on our machine are cut with such evenness and finish that the smallest possible amount of stock is wasted in sawdust and refuse.

After all it is the TOTAL SAVING and the TOTAL WASTE in which you are interested.

"I Am Convinced
**Simonds
 Shingle
 Saws**
 Have Saved Me Money"

A man bought nine 40 inch Simonds Shingle Saws.
 He wanted the best and paid the price.
 He knows whether he won or lost on the deal.
 A careful record of Shingle Saw cost was kept, with
 the result that after a few months the record showed, in
 that mill, the saw cost per thousand shingles cut to be
 slightly less than one-half of one cent. About 9 cent
 saw cost for twenty thousand shingles.

That is why this Millman said he was convinced
 Simonds Saws are *money makers* because they are *cost savers*.
 This is a statement of fact. We have the proofs and

will gladly show them. If you want low cost use the
 right saws—Saws made of Simonds Steel, made by
 Simonds Methods. Dollar for dollar value is given. A
 saw to sell for less money than the Simonds cannot be as
 good. It cannot run as economically, and it will not
 make the same profit for you in the long run.

More shingles mean more money from the same block
 of wood.

For shingle saw prices and particulars, address our
 nearest office, giving size, number of teeth and gauge of
 saw desired.

We are Specialists on Lumber and Saw Mill INSURANCE

FOR OVER THIRTY YEARS we have made
 a close and constant study of this specialty, em-
 bracing not only "The Best Protection at the Min-
 imum Cost" in the sense of Policies in the Strong-
 est Companies at the lowest possible rates, but
 the enhanced Protection of such Policies so word-
 ed as to Insure you under whatever form of sale
 or undertaking you may make with your customers,
 unaware as you may be of the application of the
 Canadian Insurance Law in such instances.

We invite inquiry as to the above and our
 "ADVICE SHEET" system which we originated
 several years ago for the special convenience of
 our Lumber Customers.

We personally inspect each of the plants we in-
 sure at least twice a year.

Canada, United States and Great Britain, \$2.00 per year, in advance; other foreign countries embraced in the General Postal Union, \$3.00.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Special care is taken to secure for publication the latest and most trustworthy market quotations throughout the world, so as to afford to the trade at home and abroad information on which it can rely in its operations.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Overproduction Should be Stopped

The ending of the cutting season for the lumber manufacturers, without any decided improvement having taken place in the market conditions for lumber, is a state of affairs which was hardly looked for last fall when lumbermen were predicting that with the opening of the season for 1909 the lumber business was pretty sure to be back again at the position which it occupied before the commercial troubles of 1907 and 1908 overtook it. There is no gainsaying the fact, however, that trade conditions to-day are far from encouraging and the reasons should be carefully sought with a view to a remedy. Theoretically speaking conditions to-day are favorable for a strong market for lumber. Money is cheap, building operations all over Canada are being carried on to a greater extent than ever before. Most Canadian mills are equipped to turn out the best quality of lumber at the least expense. There is looming up in the near future a possible shortage of timber supply. Yet prices sag and trade is almost sickly. Orders come now and then in quantities which bring encouragement, but periods of unusual quiet alternate with the brisk ones and no one is able to depend upon future business.

It is hard to point out any one feature of present conditions which needs remedying more than another, but there are many directions in which improvement could be brought about, and in which changes from present methods are essential if in future, periods of stagnation are to be avoided. Perhaps the most generally recognized and the most universal difficulty is that caused by the unorganized condition of the lumber industry. The interests of most of the lumber producers in Canada are largely identical. Many local interests clash with those of other localities, but, broadly speaking, there are a number of important questions

which could be dealt with in a manner which would assist in placing the trade upon a better economic footing. The most important of these is the regulation of the supply of lumber. It seems extravagant, when there is so much being said about the possible depletion of our timber resources, that manufacturers should turn out far more lumber than the demand warrants. Yet this has been going on for several years. The same thing applied to the manufacturing world generally, and the result was a financial stringency which came pretty close to the proportions of a panic. Lumber manufacturers did their share in bringing about this state of affairs, and if the truth were told they probably did more than their share. They have not a great deal of reason for complaint therefore, if their industry is one of the slowest to recover. For the sake of the lumber industry and for the benefit of commercial conditions in general, it is the duty of lumbermen to come more closely together and consider ways and means for the prevention of overproduction, with its demoralizing results.

It should not be a matter of great difficulty to enlist the services of the principal producers of lumber to an extent which would at least reduce greatly the possibility of a recurrence of the recent conditions under which many manufacturers continued producing at the old rate and were obliged to offer ruinous prices in order to keep their heads above water during the hard times. There is no necessity to counsel the regulation of prices. In the first place it is contrary to the law and in the second place it is unnecessary. In addition to these objections it is impractical. So long as manufacturers will overproduce they will undersell. But it should not be necessary to keep so continuously pointing out the folly of producing lumber when no one wants it and trying to make the public buy it by offering them ridiculously low prices, which mean giving the lumber away.

Quebec's Pulp Should Stay at Home

The tariff situation in the United States, as it affects Canada's pulp industry, is well summed up in a recent utterance made by Mr. Carl Riordon, general manager of the Riordon Paper Mills Company, Limited. Mr. Riordon takes a strong stand in favor of Canada taking effective measures to prevent the export of its pulp wood and thereby to encourage the establishing of pulp and paper mills in Canada. Mr. Riordon said:

"The United States have taken the lead in this matter, and have acted as if they, and not we, were the predominating party in the situation. They pretend to be in a position to dictate to Canada, when in reality their paper industry is at Canada's mercy. Chief Forester Pinchot, of the United States Forestry Department, recently stated in a report that the paper industry in the United States should have Canadian pulp wood in the future as in the past, and that Canada should impose no export duty on pulp wood. In this respect the pulp and paper industry is in a different position from the other great wood using industries of the United States. The latter can be supplied wholly from its own forests, while the former must have free access to the Canadian spruce forests. Ontario has prohibited the export of all logs from Crown lands, but leaves the farmer at liberty to export his own timber if he likes. This course, if followed by Quebec, would be just, theoretically and practically.

"The Quebec law governing the settlement of Crown lands is as perfect as a law can be, but it is an ornament, it is not administered. Settlers are deliberately employed by American pulp and paper makers in 'timber thieving' in Quebec. The settler applies for a location ticket for a farm on Crown lands. By law, he must erect a house; he erects a lumberman's shanty. He must cut ten acres of timber and make certain improvements; he takes all the timber for his employer, and instead of living upon and cultivating the land and taking out the patent, he remains only long enough to cut the timber. If the law were administered it would be practically impossible for logs to be exported.

"Then there is another side to the question. Quebec is a vast field for industrial development. The increase of population in the townships is falling off annually, because numbers go every year to engage in the pulp and paper industry in the United States. There are towns there where more French is spoken than in Montreal. Here is a French-Canadian population making pulp in the United States out of logs cut in Quebec off their own farms. It needs only the enforcement of the Quebec law to bring this great industry, and with it the lost French-

Canadian population, from the United States into Quebec. The United States will have to climb down, because they must have our pulp wood.

"There is a general clause attached to the tariff which does not appear in the bill. It is known among American lumbermen as the 'Joker,' as it is believed to have been inserted by them. It provides for a maximum tariff of 20 per cent. above the minimum, to be applied against the manufactured forest products, which include everything made of wood, of all countries who restrict the export of any single one, say white birch, of the raw products. This clause is the most sweeping of all, as it would confine the importation of pulp by the States entirely to Europe.

"Regarding Canada's supply of pulp wood," said Mr. Riordon, "some idea of the extent of the spruce forests may be gained from the official estimate of 388,000,000 cords for the Province of Quebec alone. The

annual consumption of spruce pine in North America being estimated at 3,000,000 cords. The limits of Quebec have not yet been surveyed.

"In the United States the Government has lost all control of the forests, whereas in Canada the forest regulations are scientifically planned to insure the preservation of each kind of timber, and rapidly enforced. Infraction of the law is penalized by revocation of license. As licenses are worth \$1,000 per square mile and have to be renewed yearly, this is an efficient deterrent.

"Nothing but good can come of an influx of American pulp and paper makers setting up their mills in Canada. They will bring back the French-Canadian, and invest capital in our Crown lands.

"It is difficult to say," concluded Mr. Riordon, "just what steps the Quebec Government will see fit to take should the Payne Bill become law as it stands."

Can Peddling of Lumber Bills be Stamped Out?

At this time of year, when the building trade is beginning to take an interest again in the price of lumber, retailers are likely to be asked to figure on a good many bills which in the end do not result in trade. The loss sustained as a result of the peddling around of lumber bills is a serious matter, and calls for something more than ordinary business methods if it is to be kept within bounds which will not cause trouble. Many retailers declare that the fewer bills they figure upon, the greater will be their profits. This is undoubtedly so, with well established companies which have a reputation for not being high priced, but there are others which have not obtained so good a reputation and they feel forced, in order to obtain business, to figure on everything which comes their way and thus to encourage the customers who are in the habit of doing the peddling. Dealers would all be glad to figure on everything if they were to receive a reasonable percentage of the orders resulting, but it is a fact that many estimates are obtained, not with the intention of giving an order if the price asked is satisfactory, but with the intention of using them as a lever in dealing with another firm. It is the experience of nearly every retailer to figure on bills frequently from builders who seldom if ever give them an order. They feel that it is "in the business" and has to be done, in the hope, perhaps, that fortune someday will compel the builder to patronize them. There is something radically wrong about this, but so far as one can see at present it is probable that the same conditions will continue in existence for some time to come.

One is accustomed to look upon the difficulties which have to be faced to-day as of recent origin, but in many cases they are of ancient date, comparatively speaking. This very matter of the peddling of orders is one which is already of venerable age, in the lumber business. Along with its accompanying evil of price cutting, it has been more or less prevalent at all times and has become especially active in times of business depression. In this connection it is interesting to read a reference to the matter in an article published elsewhere in this issue, which was written for the "Canada Lumberman" by Mr. John McGregor, of

Deseronto. Mr. McGregor says: "About the year 1875 Toronto had less than one-fifth its present population and was not growing very fast. The country was in the middle of a very severe commercial depression, much more severe than any that has been experienced since. Manufacturing industries had not begun to spring up, and those which were in existence were in a state of lethargy. . . . Turning now to local conditions in Toronto. For some years previous to this time trade had been brisk and, in consequence, a large number of retail yards, besides several wholesale concerns, had been established, and now, as a result of the falling off in business, these were cutting each other's throats to secure the little trade there was to be had. Cutting of prices was, of course, the principal weapon employed, and it was indulged in to such an extent that there was little if any margin of profit left; in fact, lumber was being sold in many cases at a dead loss. Builders, taking advantage of the excessive competition, would peddle their bills and specifications all over the city, getting quotations from different retail yards, perhaps finally giving the order to one of the wholesale men, some of whom did not scruple to make up a carload containing a dozen or more kinds of lumber such as might be required in the construction of a building."

Is it any wonder that to-day, when competition and the methods of securing business have been so enormously developed, lumber dealers, retail and wholesale, are still at the old business of cutting each others' throats, while builders and others stand around to enjoy the results? One would be foolish to seek to do away with the evil of figuring promiscuously on lumber bills. He might just as well seek to alter human nature. The counsel which is needed is that of sane business methods. Those who practice them in prosperous times will establish themselves on a firm foundation which will enable them to live comfortably through times of stress, and, like some we know of, snap their fingers at those who are seeking to obtain figures on a bill which will not result in an order. Firm and profitable prices could probably be maintained to-day and a good amount of business done, if this course were more general.

Tariff as Viewed by Canadian Pulp Interests

Many conflicting views have been expressed regarding the effect which a reduction in the tariff on lumber entering into the United States will have upon the lumber industry in Canada. One of the most interesting views, and one which deserves careful study, has a strong exponent in Mr. A. P. Whitford, who for many years has been closely identified with the pulp and paper industry in Canada, and is well acquainted with the country's forest needs. Mr. Whitford's views summarized, were recently expressed as follows:

If the United States insists upon putting through the Payne Bill, providing among other things, for a reduction of 50 per cent. on the duty on lumber, a reduction of 66⅔ per cent. on the duty on print paper and a substantial reduction in the duty on sulphide, why should Canada not reap the benefit by establishing these same duties as export dues on these products? These dues levied by Canada on paper, lumber and sulphide going to the United States would be applied not as pure revenue producers for Canada, but to the protection and preservation of Canada's forest areas. Moreover, a Canadian Forestry Commission would be ap-

pointed by the Dominion Government, to be composed of experts in the paper and lumber business, to have absolute authority and supervision over Canada's forests. The money derived by dues levied by Canada on her forest products going into the United States would be put into the hands of the commission to expend for the protection and preservation of the forests. Canada's forests must be protected by all means and at any cost. Canada possesses immeasurable wealth in her forests, and sooner or later the United States will be compelled to depend upon Canada solely for her supply of paper. It is Canada, and not the United States, that should dictate in the matter of imposing dues upon pulp and pulp wood going into the United States, because Canada possesses and, therefore, controls the pulp and paper market.

Mr. Whitford's chief contention is that a Canadian Forestry Commission should be appointed by the Dominion Government to have absolute control and supervision over Canada's timber limits, this commission to be comprised of experts in their business and completely independent of politics. It is his opinion that the Dominion Forestry Asso-

ciation, as it exists, is doing splendid work, but that its work is unfortunately limited to theories and suggestions and its activities do not extend into the sphere of practicality. The reason for this, he stated, was that the association did not have sufficient revenue to carry its suggestions into practice directly. The suggestions were given to the Government to be acted upon.

Regarding the proposed reductions on the American import duties on paper, lumber and sulphide, Mr. Whitford said: "If the American import duties on these products are simply to level up the advantages of American and Canadian paper manufacturers, instead of levying upon them for purely revenue purposes, then Canada should be the one to benefit from these duties. Instead of imposing an American import duty, the Canadians should impose dues on the products of their forests, as those products go out of Canada into the United States, the dues imposed to be known as international forest protection dues, and not as

export duties. The dues in the end would be the same in nature as export duties, but they shouldn't be called export duties, because the funds raised would not be applied to increasing the Government's revenues directly.

As to the suggested Forestry Commission, Mr. Whitford said: "Montreal has a commission to look after its harbor. Why should Canada not have a commission devoting its efforts solely and entirely to the preservation of Canadian forests? This commission, besides having complete supervision over the forests, keeping a close account of the amount of wood cut off each year, and presenting detailed reports to the Government once or twice a year, would also be instrumental in the establishment of a forestry school for the education of men along forestry lines—men who would eventually become experts in forestry, which will soon be one of Canada's supreme interests, and would be capable of filling vacancies on the commission."

Perpetual Leases Cause Dissention in New Brunswick

The matter of the duration of timber leases has come up for discussion in New Brunswick and has been the cause of the expression of some extremely strong opinions by those who are opposed to a proposal recently made by the Lumbermen's Association, for making the leases of present holders perpetual. An association called the Lumbermen's Protective Association has been formed by those who are opposed to the proposal, and they have taken active steps for the purpose of convincing the Government of the justice of their contentions.

The Lumbermen's Association, in addition to seeking perpetual licenses, at their last meeting voted for several other important alterations to the present conditions. They voted in favor of having scalers appointed by the Government and not by municipalities. Also they voted that the Government should give the lessee two years' notice of intention to survey land for settlement. Also, that a person should be employed to examine public lands and issue licenses for cutting pulpwood. The rate for the perpetual leases, they voted, should be \$4 a mile and 65 cents stumpage. They objected to the increased stumpage on hardwood, railway ties, etc., and urged that the Quebec survey should be adopted in New Brunswick.

At a meeting of the Lumbermen's Protective Association objection was taken to most of these proposals, made by the Lumbermen's Association. After much discussion a lengthy resolution was adopted setting forth the views of the association. The clauses of the resolution in brief were as follows:

The association views with apprehension the probability of a large number of the licensees of Crown timber limits selling their holdings to foreigners at much increased prices. We believe that the public should benefit by an increase in the value of the public domain.

We recommend that the Quebec system of survey be not adopted, and that if any system is legalized by Act of Legislature, it should be the Maltby system of survey. And further, in our opinion the appointment of lumber surveyors should not be made by the Government, but by the municipalities, as at present.

We urge that the Government embody in the Crown Land Regulations a regulation providing that in case of all lumber cut on Crown timber limits by any operator, under contract with the holder of such limits, survey of the lumber so cut shall be made by two surveyors—one appointed by each of the parties to the contract, and that in the event of a difference or dispute arising as to such survey, the Surveyor-General on the request of both or either of the parties to the contract, appoint a third surveyor to survey the lumber, whose decision shall be final.

We urge that the Government should not in any way encourage the timber limit holders in the belief that their request for perpetual leases will be granted, nor in any way commit themselves to any change of the policy of the Government respecting Crown timber limits without first giving this association, or its representative committee, an opportunity to be heard.

Freight Rate Uncertainty May Soon be Thing of the Past

The success of the application made by the Rideau Lumber Company, of Ottawa, John MacKenzie, of Ormsby, and J. A. Scobell, of Kingston, before the Board of Railway Commissioners at Ottawa, against the unfair charges for the carriage of telegraph and telephone poles, is an encouragement to shippers of lumber that they will obtain a similarly favorable result in connection with the application they recently made for an order disallowing the lumber tariffs of the Grand Trunk, Canadian Pacific, Canadian Northern (Quebec), and Canadian Northern (Ontario) railway companies. The case for the lumber shippers was well placed before the commissioners, who were shown conclusively that the changes which had been made ostensibly for the sake of introducing uniformity into the tariff, had had a very different result, inasmuch as they had caused an increase of 9½ per cent. in the charges. Not only was the freight burden increased but discrimination was introduced by the new tariff to an extent which was inexcusable. The instances of this, which were cited by the counsel for the lumber shippers, left no room for doubt in the minds of the commissioners that their claims were well founded. There was no room for argument upon the matters presented, and they should be easily settled after the railway companies have prepared a statement, as suggested by Chief Commissioner Mabey, showing the increase, if any, in earning power under the new tariff, of a car of lumber, from each of the eighteen points of origin in Ontario, to the main points of destination. The lumber business of Ontario is so important to the welfare of the whole province that it is unwise to allow it to be hampered even tempor-

arily by the imposition of rates which are not warranted. There should in the course of a short time be a schedule adopted which would afford the railroads a reasonable profit, and at the same time relieve the lumber shipper of all the uncertainty and irregularity which have prevailed for so long. The next hearing of the case will be on Tuesday, May 18th, when the railway companies are to have their statement ready. It should not be long after that before the matter is definitely settled. It is worthy of note that the application for a better tariff was not made by Ontario lumbermen alone, but that it was supported practically by the whole lumber shipping interests of eastern Canada. The Canadian Manufacturers' Association, represented by Mr. J. E. Walsh, manager of the Transportation Department, Toronto, and the lumber section of the Montreal Board of Trade, represented by Mr. W. S. Tilston, manager of the Transportation Bureau, were parties to the application.

In regard to matters of this sort, it is noticeable that the Canadian Lumbermen's Association, which was formed last summer, is already acting vigorously for the promotion of the interests of lumbermen. One of the principal witnesses before the Railway Commission was Mr. Frank Hawkins, secretary of the association, who prepared the material for the appeal. This association has necessarily been engaged largely up to date in the organization work incident to its formation. It has found time, however, to attend to such matters as this application. In the future it will have its hands full with similar matters and will be able to do a great deal to promote the interests of its members.

Regulations Governing Placing of Cars

Summary of the Rules in Force which were drawn up by the Board of Railway Commissioners—Conditions Governing Delivery and Free Time.

Editor "Canada Lumberman":—

Sirs,—Will you please inform the writer where he can procure a copy of the latest rules relating to the placing of cars, and the time given to unload, and the railway company's duties regarding giving notice of the arrival of cars. Is it the railway company's duty to place cars on a siding where it is most convenient for consignee to unload in cases where the consignee has no private siding for his own use, or is it within the company's rights to place a car anywhere on a siding where teams can drive to the car? Suppose the consignee orders the car placed at another place on the company's siding where it is more convenient to unload, and the change in placing the car would reduce the cost of unloading for the consignee, is the consignee within his rights to insist on the change and have the car placed to his order? If there is delay on the part of the railway company in placing the car to the order of the consignee, can the railway company charge demurrage on cars previous to the car being placed to the order of the consignee?

The matters referred to in the above letter are explained in the Rules authorized by the Board of Railway Commissioners, which came into effect on March 1, 1906. These rules were adopted tentatively and have proved generally satisfactory. No changes have been made, and they are still in effect. A few changes, however, are now under consideration. The rules, in somewhat abbreviated form, are as follows:

Rule 1.—A toll of one dollar shall be charged per car per day of 24 hours or any part thereof for cars held under load or to be loaded beyond the free time allowed by rule 2, for any reason for which the consignee or shipper is responsible.

Rule 2.—Twenty-four hours shall be allowed after notice of arrival, for consignee to pay charges, and order special placing or delivery (subject to rules 11 and 15). Forty-eight hours' free time shall be allowed for loading or unloading (except as hereinafter provided). On cars placed at 11 o'clock a.m. or earlier, the free time to commence at 1 p.m. following, and on cars placed after 11 a.m. the free time to commence at 7 a.m. following.

Exceptions: (a) Twenty-four hours' additional free time allowed for unloading or loading boards, deals and scantlings.

(b) Five days' free time allowed at Montreal and tide-water ports for unloading lumber for export.

(c) Twenty-four hours' additional free time allowed for clearance of Customs where the destination is a port of entry, making the total free time 48 hours in all. Where the destination is not a port of entry, 48 hours allowed for Customs clearance at the outside port of entry.

Rule 3.—No car service toll shall be charged for Sundays or legal holidays.

Rule 4.—No tolls shall be charged for any delays for which the Customs officials are responsible.

Rule 5.—Cars shall be placed so as to be easily accessible at all times during the free time. Where practicable cars shall be easily accessible on both sides. Time lost by shunting of cars, movement of trains or any other cause for which the railway may be responsible, shall be added to the free time.

Rule 6.—If weather renders unloading impracticable during business hours, the time allowance shall be extended so as to give the full free time of suitable weather; the first 48 or 72 hours, as the case may be, of suitable weather to be used, and no further allowance of time made.

Rule 7.—When, owing to conditions for which the railways are responsible, or to storms or accidents, cars are tendered to the consignee in numbers beyond his ability to unload within the free time, additional time shall be allowed, sufficient for unloading with due diligence.

Rule 8.—The consignee shall be promptly notified of the arrival of freight, by delivery of notice at address or place of business; notices given later than 6 o'clock p.m. to be considered not to have been given until 7 a.m. next morning; mailed notices to be held to have been delivered at 7 a.m. next morning.

Rule 9.—If consignee fails to give placing or delivery orders within the 24 hours allowed by rule 2, the car shall be considered as intended for public team truck delivery; if not unloaded within free time such car to be subject to the car service toll.

Rule 10.—The railway agent shall notify the consignee or his carter, on application, where his car has been placed for unloading. Any of the free time allowance lost in so doing to be added to the free time allowance. If the car has been placed before 7 o'clock a.m. and the agent is unable or fails to inform the consignee, on application, as to where the car has been placed, the free time shall not commence until 12 o'clock

noon following, unless the consignee commences to unload before noon, in which case the time lost shall be added to the free time.

Rule 11.—Freight for which the railway has previous orders from the consignee for placing on designated tracks or private sidings, shall not be entitled to be extra 24 hours allowed by rule 2 for paying freight charges and ordering delivery or placing, but when in bond shall be allowed the 24 hours provided by rule 2 (c) for clearance of Customs.

Rule 12.—When both cars and tracks are owned by the same private party, no car service tolls shall be charged.

Rule 13.—Delivery to private tracks shall be considered to have been made when cars have been properly placed on the tracks designated, or when they would have been so placed but for some condition for which the shipper or consignee is responsible. If cars cannot be so placed the railway company shall notify the consignee so that he may order them to some other siding, if he so desires.

Rule 14.—If after placing, cars are ordered to another siding on the same road, at the same station, to complete loading or unloading, by the same shipper or consignee, the free time shall be computed from the original placing, less the time occupied in replacing the car.

Rule 15.—If, after arrival, a car is consigned under switching arrangements, the original consignee alone shall have 24 hours in which to order special placing or delivery; and he shall pay one dollar per day, or part thereof, for time in excess of the 24 hours, so that the final free time of 48 hours or 72 hours, as the case may be (rule 2), shall still remain to the party who accepts delivery.

Rule 16.—If an authorized employee upon a railway which performs switching services gives notice that such railway is unable to receive cars for private sidings, owing to conditions for which the shippers or consignees are responsible, then any other railway company having cars for such consignees shall so advise them, and the car service toll shall be charged until the cars on such private sidings have been unloaded or loaded, as the case may be, or until such sidings have been otherwise cleared.

Rule 17.—Cars held in transit for inspection, grading, cleaning, bagging, or completion or change of load or change of destination, under a through rate from the original shipping point to the final destination, with or without a stop-over charge, and detained over the time allowed for such purpose in the published tariffs, shall be subject to the car service tolls. If such shipments are transferred to other cars, the car service tolls shall follow on the cars to which the transfer is made.

Rule 18.—Lumbermen and others who have their own tracks and motive power and handle cars for themselves or other parties, shall be charged car service tolls on all cars delivered to them from the time placed upon the interchange tracks until returned thereto, after allowance has been made for the time necessary for them to do the switching (not to exceed 24 hours), and for the free time authorized by rule 2.

Rule 19.—Cars shall not be held back for the purpose of evading these rules. Loaded cars held back for cause must be reported.

Rule 20.—When cars are delayed or refused by consignees because of alleged incorrectness in railway weights or charges, car service tolls shall not be charged if the rates or charges are found to be incorrect.

Rule 21.—If payment of car service tolls properly due be refused, delivery of only the car or cars on which such tolls are due shall be withheld, by means of sealing or locking, or by placing where such cars only shall not be accessible. If the owners or users of private sidings, or the owners of railways referred to in rule 18, refuse to pay any car service tolls which may already be due, delivery of cars to such sidings or railways shall be suspended, and deliveries shall be made on the public team tracks until such unsettled tolls have been paid.

The imports of forest products into Canada during February, 1909, amounted in value to \$394,847, and for the eleven months ending February, 1909, to \$5,421,606. The exports for February, 1909, were valued at \$1,740,214, against \$1,386,516 in February, 1908. For the eleven months ending February the values for 1909 and 1908 were \$36,906,080 and \$42,057,863 respectively.

The executive offices of the Hardwood Manufacturers' Association of the United States have been moved from Nashville, Tenn., to the First National Bank Building, Cincinnati, Ohio. Cincinnati has been selected for the new offices because it is the natural gateway between the producing and consuming sections, being almost exactly in the centre of the entire hardwood belt.

House of Hoo-Hoo Nearly Completed.

The Hoo-Hoo House at the Alaska-Yukon-Pacific Exposition (which will open on June 1st, and continue until October 16th, 1909), will be one of the important sights of the Fair. Work was commenced on the building on March 8th, and has been pushed with such vigor that the structure will be ready for occupancy May 10th. One of the unique attractions incorporated in the house will be a "Hall of Fame," in which pictures of representative lumbermen of British Columbia, Washington, Oregon and California will be placed in groups. A large picture of Mr. Gifford Pinchot, United States Forester (who is to be initiated into the Hoo-Hoo fraternity shortly), will be allotted a place of honor on the balcony. Photographs of noted mills will decorate the rooms and emphasize the importance of the lumber industry.

Visitors' cards can be issued without limit. Each card will cover a period of nine days, and no member can introduce the same party more than twice. Ladies' cards will be issued on member's application, and entitle the owner and her guests to the privileges of the club. An excellent telegraph, telephone, check room, mail and stenographic service will facilitate the transaction of business without leaving the Fair grounds.

Melancholy Musings of a Kitten.

Who said they'd boost in my behalf,
And teach me how to live and laugh,
And rare grape juices how to quaff—
Hoo Hoo.

Who said I ought to work and strive
To dig up 11.65
My youth just once more to revive—
Hoo Hoo

Who said that Happiness they'd give
In untold measures while I live?
Oh, yes! of this they were positive—
Hoo Hoo.

Who said long life would grow on me
Like the spreading branches of a Green Bay Tree,
And I'd live to attend my own jubilee—
Hoo Hoo.

Who said they'd pump me full of health,
And fill my coffers full of wealth,
And naught I'd loose by craft or stealth—
Hoo Hoo.

Who said that I was raised a pet,
That I could never lose a bet,
My troubles all I'd soon forget—
Hoo Hoo.

BEFORE.

Who taught me how to romp and play,
In a kittenish kind of Tom Cat way,
And many bad things to think and say—
Hoo Hoo.

Who put black blinders upon mine eyes,
And paid no attention to my piteous cries,
But left me sadder, more worldly wise—
Hoo Hoo.

Who took me all innocent, trusting and true,
And in horrible tortures roughly pushed me through,
And left me a wreck all black and blue—
Hoo Hoo.

Who took all my money, yes, every darn cent,
Designing my ruin, with deadly intent,
And then left me broke, and weary, and spent—
Hoo Hoo.

AFTER.

Who planted me deep in the onion bed,
And made me smell smells of things that were dead,
And eggs that were rotten broke over my head—
Hoo Hoo.

Who made me sit on a red hot stove,
Till my pants and skin were interwove,
And I "Balled" three times for that howling drove—
Hoo Hoo.

—West Coast Lumberman

Conservation Committee Considers Forest Preservation.

The special committee of the House of Commons on the preservation of national resources recently discussed the great loss which is occasioned by forest fires, Hon. Mr. Sifton making the statement that the railways had been responsible for denuding the country of valuable deposits. It was decided that the chairman should confer with the National Transcontinental Commission to see that the right-of-way is cleared of all combustible material. As regards the Canadian Pacific, it is proposed to apply to the Federal Railway Commission for a similar order. Some doubt has arisen as to jurisdiction, the Provincial Governments controlling the forests and the railways their rights-of-way.

Mr. R. H. Campbell, Superintendent of the Forestry Branch of the Department of the Interior, in an address before the committee stated that Canada need have no fear for her timber supply if the present rate of domestic consumption and of export is maintained, but there was every prospect that in the next few years the demand from Europe and the United States would be so heavy that the timber supply of Canada would be threatened. There was a widespread interest in the timber resources of Canada. The British Admiralty had recently inquired of him why their supply of timber from Canada had been growing poorer in quality, higher in price and less in volume. Mr. Campbell said there was need for a reform in lumbering operations in many places, as present methods involved great waste in stumps and tops of trees. In one area in British Columbia an examination had been made after a lumberman had gone over it, and it had been found that there had been a waste of \$9,012 a mile, and of this the Government had been the loser in dues to the amount of \$295 a mile.

An extensive building movement has commenced in Winnipeg. The indications are that the present season will be a record one. As a result the prices of lumber have been advanced \$1 per thousand. The advance went into effect on April 5th, and is said to have followed directly upon an increase made by the Pacific coast mills.

The imports of pitwood at Swansea, Wales, in 1908 were 36,000 tons greater than in 1907.

Toronto Lumber Trade Thirty Years Ago

By John McGregor—Conditions which Prevailed when the City was Young—
Price Cutting, an Evil of Venerable Age — Some Price Comparisons

Those who can remember the condition of the lumber business in Toronto thirty years ago may find some pleasure in contrasting them with the conditions existing to-day. About the year 1875 Toronto had less than one-fifth of its present population and was not growing very fast. The country was in the middle of a very severe commercial depression, much more severe than any that has been experienced since. Manufacturing industries had not begun to spring up, and those which were in existence were in a state of lethargy. Of railway construction there was little or none. It is true a start had been made on the Canadian Pacific, but as yet little had been accomplished. Our population was not increasing, in fact we were scarcely holding our own, and it seemed as if the wheels of progress had almost ceased to revolve. The lumber industry, always among the first to feel the effects of a depression of this kind, was in a very stagnant condition, building operations having almost come to a standstill.

This was the condition of affairs throughout the country, and Toronto felt its effects perhaps more than any other place that could be mentioned. At the commencement of the depression in trade, Toronto was one of the most important lumber centres in Canada; millions of feet were annually poured into it from the north and west, much of which was exported by vessel to the United States, besides immense quantities of square timber, or board pine, as it was termed, most of which went to the British market. It was nothing unusual in those days to see some two hundred or more cars loaded with lumber, lying in the old Northern Railway yard between Brock and Bathurst street, while from half a dozen to a dozen vessels were loading the same commodity at the docks. But "sic transit gloria mundi," and now you might look in vain to see even one vessel loading lumber in the port of Toronto. The recession of the lumber zone had altered all that, and the scene has shifted to Georgian Bay and Lake Huron ports.

Turning now to local conditions in Toronto. For some years previous to this time trade had been brisk and in consequence a large number of retail yards, besides several wholesale concerns, had been established. And now as a result of the falling off in business these were cutting each other's throats to secure the little trade there was to be had. Cutting of prices was, of course, the principal weapon employed, and it was indulged in to such an extent that there was little if any margin of profit left; in fact, lumber was being sold in many cases at a dead loss. Builders would peddle their bills and specifications all over the city, getting quotations from different retail yards, perhaps finally giving their order to one of the wholesale men, some of whom did not scruple to make up a car load containing a dozen or more kinds of lumber such as might be required in the construction of a building.

Just by way of contrast to the present prices of lumber, let me quote a few prices on some of the grades prevailing in those days. These are taken from an old memorandum book dated 1876:

	Cost at Mill.	Retailed at.
Mill culls	\$ 4.00	\$ 7.00 to 8.00
Shipping culls	5.00 to 6.00	9.00 to 10.00
Good common boards	10.00 to 12.00	14.00 to 15.00
Dimension stuff	11.00 to 12.00	15.00 to 16.00
Dressing pine	14.00 to 15.00	18.00 to 20.00
No. 1 cuts and better	28.00 to 30.00	34.00 to 38.00
Matched flooring	16.00 to 20.00
Shingles, XXX pine	2.00 to 2.25	2.50 to 3.00
Lath, No. 1	1.50 to 1.75	2.25 to 2.50

As a building material, hemlock had not yet come into general use.

There was, however, no approach to uniformity in either grades or prices in the different retail yards; while the wholesale or middleman often handled lumber by the car load on as low a margin as fifty cents per thousand, more often than otherwise accepting paper at three months in payment. The trade was in a very disorganized condition, the manufacturers generally ignoring the wholesalers and selling direct to the retailers and even to the consumers. The consequence was that heavy losses were incurred through bad debts and other causes.

Many of the manufacturers of northern Ontario who were in business in those days and are still to the fore, will shudder as they look back at those times. About 1880, the lumber business, responding to the general improvement in the country, began to pick up, and with the exception of the slump between 1893-8, has continued to improve up to last year, when the present little cloud appeared on the horizon; that is happily now being dispelled by the sun of returning prosperity.

It may interest some readers to give a list of those engaged in the

business and their locations in Toronto in those days. First, then, as being the largest and most important, I would mention the Crystal Palace Lumber Yard, on Strachan avenue, operated by J. R. Silliman, the site of which is now occupied by J. B. Smith & Sons. In connection with this yard, as a source of supply, were large saw mills at Belle Ewart on Lake Simcoe, which long ago have been dismantled. Mr. Silliman subsequently gave up business and removed to the Southern States. Perhaps next in size and importance was the St. Lawrence lumber yard, in the east end of the city, corner Front and Berkeley streets, owned by Bryce Bros., but now occupied by the immense plant of the Consumers' Gas Company. Bryce Bros. in connection with their lumber business did a good deal of building, mostly speculative, and used to pride themselves on the rapidity with which they could erect a frame building, it being nothing unusual for them to start work on a building in the morning and have it roofed and shingled and ready for the plasterers before night. Mr. Thomas Bryce, the last surviving member of the firm, died about two years ago. Space will only admit of a brief mention of the other firms engaged in the business at that time. The list follows:

Retail: William Larch, James street, site now occupied by City Hall; Hillock & Kent, Albert and Chestnut streets; Jos. Davidson, Phoebe street; Crone & Patton, Yonge street; Jos. Davis, Yonge street; P. A. Scott, Yonge street; Thos. Downey, Edward street; S. S. Mutton & Company, Queen and Sherbourne streets; Withrow & Hillock, Queen street east; Wm. Leak & Company, King street east; Jos. Gearing, Esplanade street east, Sanford, Yale & Company, Esplanade street east; John Oliver, Esplanade street west; W. W. Colwell & Company, Front street west; and a few small concerns in various parts of the city.

Wholesale: Thompson, Smith & Son, Northern Railway docks; S. C. Kanady & Company, Northern Railway docks; Cook Bros., Northern Railway docks; Donogh, McCool & Oliver, Northern Railway docks.

It is a sad commentary on the mutability of human affairs, and it would seem of the lumber business in particular, that of the sixteen firms mentioned above as being engaged in the retail business, a little over 30 years ago, only two still survive, and of the four wholesale firms, not one. Two members of the late firm of Donogh, McCool & Oliver are still engaged in the business in Toronto, one being your highly respected mayor, and the other Mr. Donogh, of the Empire Lumber Company.

I cannot close without referring more particularly to the old firm of S. C. Kanady & Company. I have some very pleasant recollections of business dealings with that firm. It was composed of S. C. Kanady, Alex. Christie and Wm. Kerr, all experienced lumbermen and three of the most genial men ever engaged in the business. This firm struggled along for a number of years against the adverse conditions then prevailing, but were finally forced to give up and were reorganized later as the firm of Christie, Kerr & Company, but a few years more saw this firm also retire. These gentlemen have all passed over to the silent majority.

Looking back upon that time it would seem that the small margins, long credits, and consequent losses which were the usual conditions of the trade are responsible for the fact that so few of the old firms are left to tell the tale.

Forest Resources of New South Wales.

According to the recently published report of the Royal Commission appointed to inquire into the timber resources of New South Wales, the total quantity of commercial timber at present standing in the State, excluding timber growing on private lands, is estimated at 23,116,000,000 superficial feet, consisting of: Hardwoods: Iron-bark, 1,355,000,000 superficial feet; other hardwoods for milling, 8,668,000,000 superficial feet; for other purposes, 11,788,000,000 superficial feet; total, 21,811,000,000 superficial feet. Soft woods: cedar, 5,000,000 superficial feet; hoop pine, 230,000,000 superficial feet; other brushwoods, 150,000,000 superficial feet; cypress pine, 920,000,000 superficial feet; total, 1,305,000,000 superficial feet. The commissioners state that, at the present rate of consumption, the quantity of hardwood timber suitable for commercial purposes, estimated to be at present standing on the forest reserves and other Crown lands of the State, will not last more than about 36 years, and that the supply of soft woods will be consumed in a little more than 20 years. Amongst other things the commissioners recommend that the present royalties on certain timber should be increased, and that the export of ironbark and tallowwood beyond the Commonwealth should be prohibited for a period of ten years. Recommendations are also made for the replanting of the most valuable timbers and for the protection of timbers at present standing.

Miscellaneous Eastern Lumber News.

In the New Brunswick Legislature, Hon. J. P. Burchill has given notice of a motion which, if adopted, will require the Transcontinental Railway to use electric power in driving its trains through the forest lands of New Brunswick.

It is reported from Truro, N.S., that a property consisting of about 40,000 acres and extending from DeBert to Earltown, has been purchased for \$200,000 by Messrs. Charles & Davidson Hill. It is further reported that these men have received an offer of \$25,000 above the purchase price. It is understood that active operations will begin at once.

An area of a thousand square miles on the south coast of Newfoundland has been purchased by W. R. Hearst as a result of negotiations with the new Morris Ministry, and it is announced that it will be made the centre of extensive paper-making operations. It is understood that the plans provide for the erection, at a cost of about \$10,000,000, of a plant with a capacity of 450 tons of paper daily. The locality includes a port which is free from ice all the year round, and it is said that after the plant is in operation there will be a regular weekly steamer service between Newfoundland and New York.

At the annual meeting of the St. John River Log Driving Company at St. John, N.B., the report of last year's business showed that about 70,000,000 feet of logs had been rafted at a cost to the lumbermen of \$1.05 a thousand feet. Estimates of the present winter's cut showed about 100,000,000 feet of logs taken out. These, with the old lumber hung up from the previous season, will make between 115,000,000 and 125,000,000 feet to come into the booms at Douglas and Lincoln, so that a busy season is expected. The following were elected directors: J. Fraser Gregory, C. P. Baker, F. C. Beatteay and Henry Hilyard. The directors at a later meeting re-elected J. Fraser Gregory president and Lewis H. Bliss was reappointed manager.

The shareholders of the Thos. Nagle Lumber Company, Limited, held their first business meeting at Richibucto, N.B., recently. The following officers were elected: R. O'Leary, Richibucto, president; W. S. Montgomery, Dalhousie, vice-president; Thos. Nagle, St. John, managing director and secretary-treasurer; H. W. Gross, Montreal, and H. B. O'Leary, Richibucto, N.B., directors. The main offices of the company are in the Globe-Atlantic building, St. John, with branch sales offices at 180 St. James street, Montreal, Que., in charge of H. W. Gross. The company's main business is manufacturing, buying and selling New Brunswick and Quebec spruce, pine, hemlock, hardwoods, cedar shingles and lath. They are also making a specialty of hard pine, cypress, white-wood, redwood, oak and other Southern woods.

Personal Mention.

J. R. Agar, who for three years has been a director with the Small & Bucklin Lumber Company, New Westminster, has gone into the real estate business with F. J. Hart & Company.

Mr. R. S. Wilson, of the Wilson Lumber Company, Toronto, has gone to Atlantic City for a two weeks' holiday, and is accompanied by Mrs. Wilson.

The Buffalo Lumber Exchange recently elected the following officers: President, G. Elias; Vice-President, Knowlton Mixer; Secretary and Treasurer, J. S. Tyler.

E. W. Dodge, sales manager of the Norton Company, of Worcester, Mass., emery wheel manufacturers, paid a visit to the Coast about the first of April, in the interests of his company.

F. Fairchild, Dominion Land Surveyor, has returned to Edmonton, Alta., after a year's work on the Fifth Meridian, near the upper Athabasca river. He reports much valuable spruce in that district, some of it 4 inches through.

J. R. Agar, who has been a director of the Small & Bucklin Lumber Company, of New Westminster, for three years, has severed his connection with that firm and joined the F. J. Hart Company, real estate agents.

Mr. F. L. Ward has returned from a trip in northern British Columbia and reports that, judging from the logs in the water, work going on at the lumber camps is unusually slack for this time of year. Mr. Ward has been in the Texada island section.

A large excursion party, made up of 2,000 Canadians, recently visited New York. Among the party was T. Burt Cole, of G. H. Perley & Company, of Ottawa, lumber manufacturers and shippers. He was accompanied by Mr. Boyce, clerk in the House of Commons at Ottawa. Messrs. Cole and Boyce made the trip entirely for pleasure, and remained about ten days.

The Gutta Percha & Rubber Manufacturing Company of Toronto, Limited, announce that the offices of president and treasurer made vacant by the death of Mr. H. D. Warren, have been filled as follows: President, S. T. Warren (Mrs. H. D. Warren); Treasurer, Mr. Trumbull Warren. The affairs and general policy of the company will be continued precisely as heretofore.

Three Canadians have been appointed members of the committees of the National Wholesale Lumber Dealers' Association of the United States. The committees were appointed by the president, Geo. F. Craig, of Philadelphia, and the Canadian members are: Dwight J. Turner, Toronto, on the railroad and transportation committee; D. H. McLennan, Montreal, on the trade relations committee, and A. J. Auger, Quebec, on the special membership committee.

John Murray, of Vancouver, former Provincial Timber Ranger, and Michael King, cruiser, have returned from a trip to Mexico, where they inspected a large area of timber in the Sonora valley. This timber is hardwood and cruises about 10,000 to 15,000 feet to the acre. There is about 1,000,000 acres of it available, government owned, the price being 55 cents an acre. It is open to taxation at the will of the president; but an effort is being made to secure an exemption clause in the deed, which will make the privilege of value. If this goes through, people of Vancouver and Victoria will probably put up the necessary money.

W. H. Rowley, president of the E. B. Eddy Company, has returned from travelling some 10,000 miles, chiefly in the provinces of Manitoba, Saskatchewan, Alberta and British Columbia, returning by California. In many of the western cities the E. B. Eddy Company have important branches, and it is Mr. Rowley's custom to pay them an annual visit. He reports an amazing improvement in business at Vancouver, B.C., the changed conditions there from a year and a half ago being very striking. In that city Mr. Rowley says there is a boom, but, fortunately, the trade elsewhere does not owe its activity to this cause.

The Canadian Forestry Association has appointed as permanent secretary Mr. James Lawler, a well known newspaper man, who for some years has made a study of the literary and business side of forestry. He will take over the editing of the literature of the association. His headquarters will be at Queen's Park, Toronto, but as it is expected that his services will be in request for delivering talks and illustrated lectures before clubs, trade organizations and school associations, he will spend a good deal of time in travelling to different parts of the Province and Dominion.

Lumber News Notes from Ottawa.

A Canadian Customs ruling has recently been announced under which stave material of sycamore or gumwood, not listed or jointed, may be admitted free under tariff item 504.

Hon. Sydney Fisher has given notice of a Government bill to create a permanent commission on the conservation of the national resources of Canada. This measure will give effect to the agreement reached during the International Conference on the conservation of national resources, held recently at Washington. The Canadian Commission, it is expected will be named soon after the bill has received the Royal assent, so that practical work may be at once inaugurated. The commission will consist of from 25 to 30 representative Canadians, and will be non-partisan in character.

The new tariff to be charged by the Upper Ottawa Improvement Company, Limited, during the season of 1909 has a few minor changes from last year's tariff. An increase from 7 to 12 cents on saw logs, 17 feet and under, coming through the booms from the head of Deschenes rapids (north slide) to the head of the Hull slide and on saw logs other than 17 feet and under, from 23 to 30 cents is accounted for by the increase in working expenses. A decrease from 30 to 10 cents on saw logs, 17 feet and under, coming through Quinze boom is explained by the increase in timber to come down the river this season. Otherwise the tariffs are practically the same.

Hon. Clifford Sifton, in a recent address to the Toronto University Club of Ottawa, dwelt at length upon the necessity for inaugurating a national movement for the conservation of Canada's natural resources. Referring to the timber resources he spoke of the advantages which would accrue from maintaining a large forestry area in Canada. The timber consumption in Canada was exceeding the supply, and, unless some means were taken to check the continual depletion of the forests, it would not be long before there was a complete exhaustion of the supply. Timber of a merchantable character in Canada was estimated now at about five hundred billion feet. In order to satisfy the increasing demand, this quantity was not nearly adequate and would last only a few years. In Canada at the present time much progress was being made. A forestry college had been established in Toronto, where forestry was scientifically taught. Also there had been established a fire surveying system and regulations in regard to the cutting of timber. Forest reserves had been set aside by the Government, where care was taken of the forest growth by skilful foresters. These reserves would act in the future as an important source of national revenue.

Great Britain's trade in wood and timber during the ten months ending with January, amounted in value to the following: Imports, 1907, \$124,377,687; 1908, \$121,827,197; 1909, \$106,398,894; exports of home produce: 1907, \$404,140; 1908, \$486,818; 1909, \$392,568.

Legal News of Interest to Lumbermen

Right to Obstruct a Stream—Employer's Liability for Injury to Workmen—
Responsibility for Fire Losses—A Privy Council Case Involving \$18,000.

Damages for Obstruction of a Stream.—Judgment has been given by Judge Davidson at Montreal in the case of the appeal of Green et al. v. Blackburn et al. The original writ was for damages of \$10,000 for loss sustained by alleged obstruction of McGregor Creek and delay caused thereby to a drive of 14,000 logs which the plaintiffs were to bring down to the Ottawa river. The obstruction complained of was the result of the erection of two dams. In the lower court the plaintiffs were awarded \$222.50 and part costs. Their motion for an injunction to restrain the defendants from closing the spillways was refused. Appeal was taken from both these findings and the defendants sought for a reversal of the judgment.

Judge Davidson decided that the judgment must stand. In the course of his judgment he said: "The defendants have, with sufficient certainty, proved that they were and are owners as well of the lands on which their two dams abutted as of the water power which these dams made effective. What were defendants' rights and responsibilities in respect of such constructions? How, if at all, did they affect plaintiffs' drive of logs? Navigable and floating rivers and streams and their banks are dependencies of the Crown domain. C.C., 400. If, says C.C. 503, a stream does not belong to the Crown domain—that is, for example, if it is neither navigable nor floatable—then a riparian owner may make use of it as it passes for "the utility of his land," but in such manner as not to prevent other like owners from exercising a similar right. The article proceeds to say that these provisions are subject to those of C.S.L.C., Cap. 51. This chapter is now R.S.Q., sections 5535 and 5536. Section 5535 materially broadens the Civil Code privileges of the riparian owner, for it gives him, in addition to such use as may be necessary for "the utility of his land," the right to turn the water course "to account by the construction of mills, manufactures, works and machinery," and for this purpose to erect "flood gates, canals, embankments, dams, dykes and the like." Compensation for resulting injuries to others is provided by R.S.Q. 5536, which enacts that "the proprietors or lessees of any such works are liable to all damages resulting to any person whomsoever, whether by the too great elevation of the flood gates or otherwise." The Municipal Code, articles 868 and 891, provide that every river or natural water course which is neither navigable nor floatable at certain periods of the year, is a municipal water course, and that any person may use the same as well as the banks thereof for the conveyance of any kinds of timber, subject to the payment of all damages. The right to float timber down streams which are floatable during the freshet season is well settled. Under the positive laws and the decisions cited we have to regard McGregor Creek as a stream which riparian owners—and especially if, as in this case, they can show express title to the adjacent water power as well—might turn to account by the erection of dams and works. Having erected these works under authority of the law, defendants cannot be restrained by injunction from using the water in such manner as may be necessary for the operation of their power house. The only recourse possessed by those who have been injured is for damages. The judgment under review properly so held.

Writ by Railway to Collect Switching Charges.—The Grand Trunk Railway Company has issued a writ in the County Court against the R. Laidlaw Lumber Company, Toronto, for the payment of switching charges on a number of cars. The case involves switching charges against which the R. Laidlaw Lumber Company recently appealed before the Dominion Board of Railway Commissioners. At the time when the switching charges were put in force by the railway companies the Laidlaw Company had seventy-five to one hundred cars switched to their C.P.R. Dundas street yards at Toronto, and refused to pay the switching charges. The cars were held up and the railway companies threatened to unload the material and not switch any more cars unless they were paid for in advance. Finally the Laidlaw Company made payment under protest, and entered a case before the Railway Commission, who decided adversely to them. The railway company are now endeavoring to collect these unpaid charges by means of a writ and the Laidlaw Company intend shortly to appeal the case to the Supreme Court. They maintain that the railway had no right to collect any charges as they had no tariff in force. Other lumber shipping companies, who are in a similar position, have expressed their willingness to join with the Laidlaw Company in having the case tested.

Liability of Employer for Injury to the Person.—In the case of Murray et al. v. Miramichi Pulp & Paper Company, which recently came before the Supreme Court of New Brunswick, the company entered a demurrer to the declaration of the plaintiffs. The plaintiffs claimed \$5,000 damages for the death of Peter Murray, while working in connection

with a tramcar of the company. The claim was made by the sisters of the deceased, for the benefit of themselves. The company's demurrer was on the ground that right of action only arose where it was for the benefit of the wife, husband, parent and child or either of them. The court held that the demurrer must be allowed, with leave to amend the declaration on or before September 1st next, on payment of costs.

Legal Status of Lumbermen on St. John River.—At the request of several prominent New Brunswick lumbermen an inquiry has been instituted by the Hon. William Pugsley, Canadian Minister of Public Works, to determine the legal status and the rights of lumbermen along the St. John river in connection with the diverting of waters from the Northern Allegash stream into the Penobscot by means of a canal instead of allowing those waters to follow their natural channel into and down the St. John. The Minister of Public Works has learned that the building of this canal was authorized by the Maine Legislature, and he believes that eventually the grievance, from an international standpoint, will be remedied by the United States Government through a waterways commission.

Suit to Recover Commission.—Messrs. Royce & Henderson, solicitors, Toronto, are suing the National Trust Company, trustees of the estate of the late Mr. E. O. Bremner, of Toronto, at the Non-Jury Assizes before Mr. Justice MacMahon for \$19,000 for services rendered, and commission. Mr. Bremner was interested in the Sturgeon Falls Pulp Company. The services for which the claim is made were in the securing of a subsidy of \$160,000 from the Dominion Government for the building of a railway by the Pulp Company from Sturgeon Falls to Temagami Lake.

Negligence in Setting Out Fire.—In the case of Davis v. Rowsome action was recently taken before Judge MacMahon for \$1,000 damages caused by alleged negligence in setting out fire, so that it spread and ran into the plaintiffs' lands and fences and consumed his lands, timber and wood. It was admitted that the defendant was negligent in starting the fire and the only question was the amount of damages. This was fixed by Judge MacMahon at \$425.

Damages for Destruction of Timber.—Blue & Deschamps, of Rossland, have received word of the decision by the Privy Council in their favor in the case against the Red Mountain Railway Company, in which the jury awarded \$18,000 damages. This case was fought through all the courts and the decision in favor of the timbermen, whose limits were burned, and who sued for \$20,000 damages, is of much interest to timber owners.

Limit of \$3 for Changing Destination of Car in Transit.—An important general order has been issued by Mr. D'Arcy Scott, Assistant Chief of the Board of Railway Commissioners, in a complaint filed by Hyde & Webster, of Montreal, in respect to an extra charge of \$4.95 on a carload of bricks shipped from Casselman to Dorval. The order will be of interest to shippers of lumber as well as brick. The dispute arose over the practice of the company in charging one cent per hundredweight when the destination of a shipment was changed during transit. The Board decided that in future railways must not charge more than \$3 for changing the destination of a car in transit.

An Important U. S. Judgment.—The Mississippi Supreme Court on April 12th rendered an opinion through Special Judge W. R. Harper, affirming the decision of Chancellor G. G. Lyell in the suit brought by former Attorney-General Fletcher against the Retail Lumber Dealers' Association of Mississippi and Louisiana. The decision of the Chancellor perpetually enjoined the further operation of the organization and ordered its dissolution, on the ground that it had an agreement, the existence of which was admitted, whereby its members were not to make purchases from manufacturers who made sales to consumers. The agreement is held to have had no other purpose than the stifling of competition in violation of the code. The association will appeal the case to the highest court in the land.

Damages for Breach of Contract.—In the action of the Paterson Timber Company against the Canadian Pacific Lumber Company, of Port Moody, for \$28,000 for breach of contract, judgment was given for \$24,250.

Judge Grant has given judgment at Vancouver, B.C., for the plaintiffs in the action brought by J. E. Bird and other members of the Alberni Canal Timber Syndicate against John McLarty. The claims against Mr. McLarty formerly amounted to several thousand dollars, but there was a counterclaim against the plaintiffs, and the court considered that this reduced the amount due the latter to \$536.

Mr. D. E. Mann's Views on the Pulpwood Situation.

In an interview published recently in the "Saturday Evening Post," Mr. D. D. Mann, of Mackenzie & Mann, after referring to other natural products, spoke as follows regarding the pulpwood situation in Canada and the United States: "Of the principal natural products of both countries, lumber and pulpwood remain to be considered. Here the Canadian advantage is indisputable; and some of our public men and journalists seem inclined to make more than enough of it. It is singular in that it brings export duties into the discussion, and, to that extent, complicates the larger problem. With a population of six millions, we have about 1,600,000,000 acres of pulpwood. The United States, with a population of eighty millions, has 600,000,000 acres.

"If pulpwood and pulp were put on the United States free list, the price of paper would be conditioned by the cost of manufacture nearest the supply of raw material. The pulpwood of the United States is being used up three times faster than it grows, or can grow under wise conditions of husbandry. The approach to exhaustion is, therefore, rapid, and unless a new permanent supply can be secured, the papermakers of the United States will either put prices up to figures which will create an effective rebellion of all the newspapers in the country, or they will keep prices within reasonable bounds by making the best of the opportunities of manufacture nearest the supply—in Canada. The Canadian tariff induced American manufacturers to establish branches in Canada to supply the Canadian market. Free entry to pulp and pulpwood, plus the possibility of a Canadian export duty, would encourage—that is a better word than 'compel'—the conversion of pulp logs into pulp on Canadian rivers, by the aid of water-power, in which Canada is the richest country in the world."

Interesting Paragraphs from the West Indies.

Gordon Grant & Company, Port-of-Spain, Trinidad, report under date of April 3rd as follows: Lumber and cooperage materials—Beyond the cargo on the schooner Alexandra from Bear river, N.S., with 19,279 pieces of lumber, and 285 spruce spars, no further arrivals have taken place, but several ordered cargoes of pitch pine from Mobile are expected shortly. Prices are quoted as follows: Nova Scotia W. P., per thousand feet, \$22 to \$24; spruce, \$18 to \$20; P. P., assorted sizes, \$30 to \$34.

There is no doubt as to the value of the Dominican hardwoods for furniture making, says a Government report from Barbados, and a large number of varieties of it, suited for this purpose have been already catalogued. A few years ago, two sets of samples of these woods were prepared and polished to show their beauty of grain and color, and capacity for taking a high finish. One set was sent to England and shown there, and the other went to Canada with the West Indian exhibits. The promoters of the proposed railway have decided that as soon as it is possible to get out a sufficient supply of this lumber, they will furnish samples on application.

S. P. Musson, Son & Company, Barbados, report under date of April 10th as follows:

Lumberstuffs.—White pine—There have been no arrivals during the fortnight and as stocks in dealers' yards are low, a couple of cargoes should sell well. Spruce.—The schooner "Basile" arrived on the 27th, ulto. with 174,000 feet, chiefly merchantable, to selves, for which we obtained \$20.75 for merchantable and \$16 for second quality. We also know of another small cargo on the way, and these will keep the market supplied for the present. Pitch pine.—No arrivals, but one or two cargoes have been contracted for ahead. Shingles.—No receipts of either Gaspé or cedar laying and both descriptions are in good demand. Shooks.—No receipts, but stocks are heavy. Wood hoops—No arrivals, but stocks are more than sufficient for requirements.

Canadian Lumber Statistics for Ten Months.

Canadian exports of unmanufactured home produced lumber during January and for the ten months ending January, 1909 and 1908, amounted in value to the following:

	January.		Ten months ending Jan'y	
	1908	1909	1908	1909
Great Britain	348,878	185,937	11,176,475	8,867,434
United States	862,388	1,257,063	25,143,527	23,362,467
Other countries	260,776	188,912	4,280,654	2,865,975
Totals	1,472,042	1,631,912	40,600,656	35,095,876

Exports of home produced manufactures of wood amounted in value to the following:

	January.		Ten months ending Jan'y	
	1908	1909	1908	1909
Great Britain	409,275	235,926	11,947,841	10,162,680
United States	1,146,648	1,616,111	28,317,895	25,879,960
Other countries	296,123	209,923	4,561,033	3,252,345
Totals	1,852,046	2,061,960	44,826,769	39,294,985

Random Business and Machinery Notes.

The Diplock-Wright Lumber Company, of Vancouver, have recently installed a heavy four-saw edger for their mill, obtained from H. W. Petrie (B.C.) Limited.

The Fraser River Lumber Company, Fraser Mills, B.C., have installed machinery for the manufacture of cross-arms. They recently received an order for 400,000 from the Manitoba Government.

The Vancouver branch of the Simonds Canada Saw Company recently received a straight car load of saws from Montreal manufacturers, practically all of which had been sold previous to their arrival in Vancouver.

The Jervis Inlet Lumber Company, at Ladner, B.C., have lately installed a new 66-inch x 16-foot, 125-pound pressure boiler. This was supplied by H. W. Petrie (B.C.), Limited.

The Pitt Lake Brick & Cement Company, of New Westminster, have purchased a 60-foot cylindrical, revolving sand-drier, from H. W. Petrie (B.C.), Limited, for installation at their plant at Pitt Lake, a few miles east of New Westminster.

The Ober Manufacturing Company, of Chagrin Falls, Ohio, U.S.A., have issued an illustrated catalogue of their lathes, sanders, shapers, etc. The machinery described and illustrated in the catalogue includes a wide range of excellent designs.

H. W. Petrie (B.C.), Limited, unloaded two car loads of sawmill machinery, engines and boilers, early in April. These were intended partly for stock in their Vancouver warehouse, and partly for orders already placed.

The branch office at Spokane, of the Hofius Steel & Equipment Company, of Seattle, has recently undergone a change of management, Mr. Chester Colter having succeeded the former manager, Mr. F. W. Boldrick. Mr. Colter's Spokane address is 108 Auditorium Building, where he will be pleased to meet all the old friends of the company as well as all the new ones.

Wickes Brothers, Saginaw, Mich., have issued a bulletin, No. 1341, under date of April 15, containing information relating to their extensive stock of machinery for sawmills, planing mills, woodworkers, cooperage plants, shingle mills, etc. Their new model No. 16 gang, they claim, carries thinner saws and cuts faster than any heretofore made. Its fast work is the result of their improved oscillation movement.

The S. Knechtel Wood-Turning Company, Southampton, Ont., have issued an attractive catalogue of their mouldings and turnings. The catalogue is extensively illustrated and handsomely prepared, and should prove of much interest to all who make use of such articles. The company manufacture various kinds of mouldings, including compressed, plain and carved. The compressed mouldings are made from first and second-class dried lumber, and being carefully manufactured, are of splendid quality. The company carry patterns in stock, of white oak and birch as it runs for color. In plain mouldings they have a large variety of patterns, and can manufacture all kinds, and for all purposes. Their carved mouldings are carved in the solid wood. The catalogue shows only a few patterns. A great many other designs can be made. Any one interested in the mouldings and turnings will do himself a service by writing to the company and mentioning the "Canada Lumberman."

New Forestry Reserves in Rainy River District.

An order in Council has been passed by the Ontario Government setting apart a new forest reserve of one million acres in the Rainy River district. The new reserve comprises the densely wooded territory west of the eastern boundary of the district and contiguous to the international boundary. It includes a large portion of Hunter's Island, a well known haunt of game. The order in Council also provides that the new reserve shall be a provincial game preserve. The reserve adjoins a similar allotment of land set apart by the State of Minnesota. The original plan of the promoters was to utilize the two million acres as an international reserve, conducted jointly by the officers of Ontario and Minnesota. The Provincial Government has not, however, followed this course, and the Ontario reserve will remain solely under this province and be officered solely by its own wardens. The staff for this work has not yet been selected.

The growing interest among educational institutions in the subject of forestry has been accentuated by the announcement that a course in forestry will be established in Columbia University, New York City, at the opening of the new academic year in September, 1909. It is planned to have the course on lines entirely different from those of the Yale or Cornell schools. The new curriculum will be put into effect during the coming year, but it is not expected that there will be any additions to the faculty until two years from now.

A. L. Mottes, manager of the Prince Albert Lumber Company, states that the lumber trade expects the busiest season on record at Prince Albert, and the biggest building year in the history of the city.

THE BRITISH COLUMBIA TRADE

Advance of Ten Cents in B. C. Shingles

A Vancouver despatch announces that British Columbia shingles have been advanced in price ten cents. So great has been the demand for the past two weeks that a conference of owners of the largest producing mills in Vancouver was held on April 30th, at which it was decided to make an advance. An agreement was accordingly made and notice sent out to all travellers to advance their quotation on shingles to \$2 f.o.b. Vancouver. This rate applies to British Columbia stars and is the basis on which all prices for lower grades are made. Last fall and during the early part of the winter, stars were selling in Vancouver at \$1.45 and \$1.50, there being practically no market. Demand was poor throughout the winter, but now the mills are receiving more orders than they can readily attend to. It is not probable that the advance in price will result in any decrease in demand, 75 per cent. of which comes from the United States, where the high grade shingles from British Columbia command the highest price on the market.

Lumber prices, which have been stiffening for some weeks, owing to an increasing demand from the Northwest, will probably be given an upward direction shortly as the result of a recent conference of sawmill owners in Vancouver, when members of the British Columbia Lumber & Shingle Manufacturers' Association, Limited, discussed the question of an advance. No action was taken at the meeting, but signs of increase were in evidence and it was stated by a member of the association that it would be only a short time before a move in that direction would be made. At present, owing to the lack of cohesion, there is no rigid base price, but it is generally accepted that \$10 for rough lumber is altogether too low to permit of a profit. The sawmill men claim that if they received \$17 per thousand feet for their product for the balance of the season they would not make up their losses for the last year. Any advance on the coast may be followed by an increase in the prices of the mountain mills.

Reports from the prairies say that business conditions east of the Rockies are reflected by the recent phenomenal increase in the demand for lumber. They promise soon to show further improvement, as 80,000 immigrants from the United States alone are expected to cross the border during the next few months. Statistics compiled by the freight traffic officials of the Canadian Pacific Railway show that the movement of lumber from the coast and Kootenays to the Prairie Provinces and eastern Canada during March showed an increase of 300 per cent. over the corresponding figure of last year.

W. A. Anstie, secretary of the Mountain Lumbermen's Association, states that while there is no boom, and the mill men generally are not crowded with orders at very attractive prices, there is a much better feeling than has prevailed for some time, and there seems to be every reason to expect a steady and progressive strengthening of the market.

The lumber mills on Vancouver Island are finding it necessary to operate their plants continuously to their full capacity. Mr. S. Baxter, Provincial Boiler Inspector, who has just returned from a tour of the east coast, states that the Genoa Bay mill, owned by the International Lumber Company, is preparing to open up after being dormant for twelve years. They will be ready shortly and the prospects are considered so good that it is thought probable that they will continue without cessation from this time forth. At Shawnigan and Cowichan lakes the mills were busier than they had been for many months.

There is much activity in loggers' supplies at Vancouver, and camps are starting up along the coast. It is expected that logs will soon be cheaper. There continues a poor demand for rough lumber and a fair demand for uppers. The dropping off of price in the Washington shingle market has adversely affected the prices in British Columbia. With shingles at \$1.90 in Seattle, they must be sold in Vancouver at \$1.60 to meet the duty.

The log market in British Columbia has weakened perceptibly of late, and further reduction in the price of logs is imminent. The following may be said to be the prevailing price of logs, delivered at mills, all charges paid: Fir logs, No. 1, \$13; fir logs, merchantable, \$9; fir logs, rough or No. 2, \$6.50; cedar, according to quality, \$7.50 to \$10; spruce, according to quality, \$8 to \$10. Lumber prices do not justify a greater price than \$8 for merchantable logs.

British Columbia Much Interested in the Tariff.

The statement made by Mr. Gifford Pinchot, Chief Forester of the United States, that the abolition of the import duty on lumber would not ensure the conservation of the forests, or reduce the price of lumber to the consumer of the United States, has caused some interest in lumber circles at Vancouver. It is a well known fact that but two per cent. of the supply of lumber in the United States comes from Canada, and as the cost of production in Canada, in some grades at least, is greater than in the United States, Canadian lumber, even with the duty off, when

sold in the United States, would not be more than five per cent. cheaper than United States lumber. Furthermore, Canadians, ultimately, as Mr. Pinchot says, will require all their lumber for their own use.

This is the opinion of one who is admitted to be a competent authority on the subject, and the British Columbia Government is doubtless bearing it in mind, in framing timber legislation.

There is no doubt Canada's first duty is to herself, so that if we supply the United States with lumber, the Government should look to it that Canada's interests should be the first considered. In British Columbia this question is more important than in any other province in the Dominion, and the Provincial Government itself should note well the remarks of Mr. Pinchot on this important question.

Crow's Nest Pass Lumber Company Changes Hands.

The sale of the Crow's Nest Pass Lumber Company, located at Wardner, B.C., after being under consideration for a year or more, was consummated recently, it being understood that the price paid was \$1,200,000. Mr. Peter Lund, who has been the manager of the company since its inception, made the following statement regarding the transaction:

"All the shares of the Crow's Nest Pass Lumber Company, Limited, formerly owned by myself, John Breckenridge and associates, have been sold to E. Golden Filer and associates, of Manistee, Mich., together with about 40,000 acres of timber lands in the Kootenay Valley, formerly owned privately by myself and Mr. John Breckenridge. The company

Mr. Peter Lund
Managing Director of The Crow's Nest Pass Lumber Company.

will continue business under the old name and style. In order to take care of the concern under the new arrangements, the capital stock of the company will be increased from \$250,000 to \$2,600,000. There will be practically no change in the management for the present, or the present staff. I have consented to look after the business, as usual, for the present."

Mr. Peter Lund, the manager of the old and of the new company, whose portrait is published herewith, is largely responsible for the progress it has made. He was born in Sweden, near Christianstad, and moved with his parents to North Dakota when seven years of age. He lived on a homestead in the Red River Valley for ten years, near Fargo, and then left home and went to Montana. His life, since coming from the Old Country, has been spent in Dakota, Montana, Idaho, Washington and British Columbia. He went from Washington to Nelson, B.C., the year before the construction of the Crow's Nest Pass Railway, where he met Mr. John Breckenridge, and formed a partnership with him to take up the contract of putting in the system of waterworks at Nelson. Afterwards they took contracts for railway work on the Crow's Nest Pass Railway, and built the North Star branch. After building this branch, Mr. Lund turned over the railway work to Mr. Breckenridge and began to acquire property for the purpose of engaging in the lumber business at Wardner, B.C. This was about six years ago, and during that time there has been built up at Wardner one of the largest and most successful lumber plants in British Columbia. Mr. Lund has given his personal supervision to the work and has gathered about him an able and trustworthy staff of lieutenants, including: G. G. Jones, chief ac-

countant; A. Sheppard, assistant; F. W. Burgess, paymaster; H. C. Lindsay, sawmill superintendent; Otto Wisner, superintendent of the planing and finishing department; H. Helgeson, superintendent of the shipping department; D. Breckenridge, superintendent of the logging department; Thomas Gaffney, storekeeper, and B. Markell, assistant storekeeper.

The construction of additional mills and a large system of logging railways are now being planned by the new owners and will be undertaken as soon as conditions justify them. The officers of the new company will be: William Went, president; W. F. Baker, vice-president; W. J. Gregory, secretary-treasurer, all of Manistee, and Peter Lund, of Wardner, managing director.

The partnership heretofore existing between Mr. Lund and Mr. Breckenridge is now in course of dissolution, but Mr. Breckenridge will continue the railway work.

British Columbia's New Vicegerent Snark.

P. D. Roe, vice-president of the Emerson Lumber Company, Vancouver, has been appointed Vicegerent Snark of British Columbia. Mr. Roe was born in Edinburgh, Scotland, and is 46 years of age. He has been engaged in lumbering for nearly a quarter of a century, his first experience being at Tualatin, Ore., where he worked in a sawmill. He went to the Royal City mills, Vancouver, where after one and a half years as yard man, he was made foreman of the mill, which position he held for about one and a half years. He then became identified with George Cassady & Company as yard man and travelling salesman. In 1889, in company with R. Abernathy and T. F. Paterson, Mr. Roe formed the Canadian Pacific Lumber Company at Port Moody, operating the mill until 1907, when he became interested with J. S. Emerson in his mill and logging interests, assuming the position of manager of the mill end. Mr. Roe is also interested in the Independent Shingle Company, New Westminster, and in the firm of Abernathy & Loughheed, Limited, at Port Henry.

Activity Continues Among Timber Limit Buyers.

A syndicate composed of Messrs C. S. Battle, J. T. Danaher and J. Hulbert, all of Vancouver, have purchased a substantial interest in 24 square miles of Crown granted timber on Vancouver Island, extending from Port McNeill, on Broughton Strait on the east coast, to Rupert's Arm, on the west coast. The tract is said to be one of the most densely forested timber areas in the province. It is estimated to contain three hundred million feet of timber, fifty per cent. of which is cedar.

Among recent timber sales are the following: 16,000 acres of fir and spruce on Cowichan Lake, Vancouver Island, to Minneapolis people, the former owner being W. J. Malcolm, of New Westminster; the sale of 1,400 acres of Crown granted land on the Great Northern Railway, in the Langley district, to Messrs. De Beck & Tait, of New Westminster, for \$30,000; the sale of eight square miles of timber on Craycroft Island to Andrew Mowat, of Salt Lake City, for \$65,000; the same buyer also bought 6,500 acres of timber from Messrs. Danaher & Hulbert, of Vancouver, for \$55,000. It is the intention of Messrs. De Beck & Tait to erect a sawmill on their limits.

A party of Nebraska capitalists spent most of the month of March in looking over the timber situation in British Columbia. They will probably invest about \$2,000,000 in the province. Members of this party are principals in the Standard Bridge Company, of Omaha. They have organized a syndicate for the purpose of buying timber limits, so that they may cut their own timbers for construction work. Sawmills will be erected in British Columbia, if limits are secured. The party are also visiting Victoria, Seattle and Portland. The head of the visiting investors is Robert Drake, of Omaha, and the other members are H. D. Miller, Stanton, Neb.; Robert Tait, Freemont, Neb.; Robert Appleby, Stanton, Neb., and W. B. Jamison, Portland, Ore.

Japanese Looking After Their Own Interests.

The Japanese Association of the Pacific Northwest has collected statistics regarding the number of Japs employed in the mills of Washington. They give the number of 2,685. This includes those employed in logging camps also. Oregon employs 260, and Idaho 730.

A Washington despatch says that the agent of leading lumbermen in British Columbia are covering the State of Washington, taking pictures of Orientals at work in the mills, and using the information and pictures as an argument in favor of the removal of the tariff. This is a retaliation move, it is claimed, against the action of the Washington lumbermen who had pictures taken of the Orientals at work in the British Columbia mills and forwarded them to Washington when the lumbermen appeared before the Ways and Means Committee of Congress to express the sentiments of the Northwestern lumber interests. This statement has the appearance of an unfounded rumor. There is a general desire in British Columbia to have the tariff removed, and no information can be gained of any such retaliation movement as mentioned in the Washington despatch.

Miscellaneous Notes from the Pacific Coast.

R. D. Rorison & Son are starting a sawmill and shingle mill across the river from Eburne, at the junction of the Lulu Island branch of the B. C. Electric Railway. They will expend \$100,000 before the plant is ready for operation. The site includes 1,200 feet of water frontage.

The Fraser River Lumber Company, Limited, are negotiating for a line of steamships to operate regularly between Fraser River points and ports of the west coast of South America. It is understood, however, that the question will not be finally settled until the company is guaranteed 26 feet of river depth at all tides. Once the channel is sufficiently deep the mill company promises to run night and day, and as the mill is one of the largest in the world, this means a very heavy cut.

According to Mr. Tytler, of Vancouver, B.C., who is prominent in the shingle world, the shingle men of that section prefer that the 30-cent duty on that product remain. He claims that their shingles have a reputation, and that if the duty were removed, the industry would be broken into by manufacturers of poor stock, which would ultimately lower the standard and force prices down. "We shipped 4,000 cars, or 1,000,000,000 shingles into the United States last year in spite of the duty," said Mr. Tytler, thus supplying one-sixth of all the shingles used in Uncle Sam's territory. We are pretty well satisfied with conditions as they are."

The Great Northern Railway Company is reported to be preparing a new tariff of freight rates which will show an advance at certain points in Ontario, for lumber shipped from the Pacific coast. It is understood on the best of authority that the Canadian Pacific Railway Company has decided upon a similar advance and that it will be put in force about the first of June. These tariffs will apply both to shingles and lumber and will be very unwelcome to the shippers at Ontario points. The lumber business in Ontario at present is so hampered by the unsatisfactory business conditions prevailing throughout the country, that an additional freight charge will be a serious handicap. It will probably not be accepted by the lumber shipping companies without a strong complaint being made. It is believed, in fact, that an additional freight charge would be more than the majority of dealers in Ontario could stand. This being the case, if the railway companies increase their rate, an appeal will probably be taken to the Railway Commission, where a strong case could be made against the advance.

Trade Enquiries.

The Dominion Government Trade and Commerce reports contain the following trade enquiries. Readers of the "Canada Lumberman" may obtain the names of enquirers by writing us, enclosing stamped envelope and stating number of enquiry:

398. Cornice pole rings, maple squares, etc.—A well known window roller manufacturer in Manchester, Eng., is in the market to purchase carload lots of cornice pole rings in white wood and maple squares of different dimensions. Will enter into a contract for a year's supply, taking 500 gross at a time. Will pay cash against documents, or on receipt of goods.

401. Lumber.—A London firm is desirous of hearing from Canadian shippers of lumber, and particularly wishes to get in touch with exporters of rock elm logs and lumber, also maple, soft elm, hickory and oak lumber and logs.

427. Machinery. A North of England firm manufacturing box making machinery wishes to get into touch with likely Canadian buyers.

439. Edge tools.—A Manchester firm asks for catalogues and prices of edge tools from Canadian manufacturers.

446. Wood turnery.—A Liverpool firm wishes to correspond with Canadian manufacturers of all kinds of wood turnery.

447. Deals, boards, etc.—A Manchester firm asks for prices of pine deals, boards and sidings, all qualities and sizes, from Canadian exporters.

448. Pine doors.—A Lancashire firm asks for description and prices of pine doors from Canadian manufacturers.

449. Blocks.—A Liverpool firm wishes to obtain prices of oak and maple blocks from Canadian exporters.

451. Spruce deals.—A Manchester firm wishes to obtain prices of spruce deals from Canadian exporters of same.

Prices at Winnipeg Have Not Advanced.

A Winnipeg despatch says that so far there has been no advance in the prices of lumber at Winnipeg, in spite of great activity in building operations. President Sprague, of the Sprague Lumber Company, is quoted as saying that the rumored advance is without foundation in fact, thus far. On the contrary, Mr. Sprague pointed out that there has been a reduction of \$2 on timber and dimension, a reduction of \$2 on the shiplap most used; laths are \$1 less than in 1908, and shingles are 25 cents less than last year. The reductions apply to, say, 90 per cent. of the material required in a building.

Obituary.

The death is reported from Vancouver of Daniel Haggerty, well known throughout British Columbia as the most successful skid-road builder in the province. Deceased expired suddenly in the street. He was 55 years of age.

The death of Lewis Miller, head of the Lewis Miller Company, of Halifax, N.S., extensive lumber operators, occurred recently at Criell, Scotland. The company, which is a Scottish concern and has large lumbering interests in Nova Scotia, has headquarters and shipping piers at Ingraham Docks, near Halifax.

The death of Frederick Dunbar Miles, of St. John, N.B., occurred recently at his home on Douglas avenue. Mr. Miles had been engaged for several years as manager for D. D. Glasier & Sons, lumber freighters and tug boat owners. He was in his 34th year and was prominent in a number of societies and clubs. He was a member of the Knights of Pythias, a past master of Hibernia Lodge, A. F. & A. M., a member of the Knights Templar and of the Mystic Shriners. He was also prominent among the curling clubs. Death was due to a complication of heart trouble and quinsy. Mr. Miles is survived by his wife and two children.

Bright Sap Constitutes Defect in Furs.

The question whether bright sap should be considered as a defect in No. 1 fir flooring, ceiling and finish is causing a considerable discussion in the middle Northern and Northwestern States. The Pacific Coast Lumber Manufacturers' Association are reported to be contemplating a change in the grading rules to provide that bright sap should not be considered a defect in these lines and as a result a meeting of the eastern sales representatives of west coast manufacturers was recently held and a letter was drafted and sent to the Pacific Coast Association outlining their objections to the change. The main objections taken in the letter were as follows.

First—Competing woods do not allow this defect in their No. 1 clear.

Second—Fir has been introduced to the eastern trade with the understanding that there is to be no sap in the No. 1 clear grade, and most, if not all, of the work put forth in introducing fir, if a change is made, must be done over.

Third—The demand for fir flooring in the southwest, where there is a large trade, it being used almost exclusively for porch floors, will be lost.

Fourth—Stock finished in oil or natural color, when containing sap cannot be successfully treated and give satisfactory results.

The letter included a recommendation that the grading rules should specify what grades will allow sap and, if so, what per cent. in any particular grade, especially in grades of shop lumber.

Spring Cleaning in the Retail Yard.

Every spring the good housekeeper goes over her home from basement to attic. From her some retail lumbermen might, to their advantage, take a cue. The assertion that certain yards the year round are in a state of chronic disorder would not go undisputed, a fact that emphasizes the methods of those yardmen who strive for order and cleanliness. In the best kept yards, however, rubbish accumulates during the winter that, once the ground is dry and spring has really come, must be removed—or should be removed. Leaves, splinters, dead grass and other items, some of which may be accounted for naturally and others which no one can account for, are much in evidence and should be carted away. On top of a snowdrift in the corner of a certain yard a dozen or more tin fruit cans were noticed, which had been easily disposed of by tossing over the fence.

There are yards in which the stables are connected with the sheds—a combination that can not be recommended—and around these premises in the spring is a litter the absence of which would add to the appearance of the place. To these stables, as well as to the horse barns located inside the yard limits, straw and hay are frequently drawn during the winter, and when unloading it is scattered more or less, the wind sometimes carrying it over the yard in every direction.

Generally it is during the fall and spring that the mud capacity of a yard is learned. During the dry weather of summer, or the freezing weather of winter, it is no credit to the alley if it be respectably passable, but the rains of the fall and the melting snow of the spring bring into prominence the low places, and while they are yet eyesores it would not be far from a bright idea to make them with a stake, lest they be forgotten, and later in the spring fill them with cinders or gravel. While there are dealers who, judging by their persistency, appear to rejoice in the fact that their yards retain their primeval glory—dust in the summer and mud in the fall and spring—there are others who are more attentive to nature's imperfections and with cinders or gravel, from the standpoint of a lumber yard, make a thing of beauty of the plant.

It may not be amiss to suggest that when the dry earth and the sunshine of spring shall be ours to enjoy there are coal bins which it would be well to look after. All men who shovel coal from the bins to the delivery waggons are not artists, and from their shovels lumps of coal are scattered in the snow which are not gathered up. The snow

having disappeared in the spring, in front of certain bins the mud has been seen thick with coal—that surely was too valuable to go to waste in that way when it could have been sold for \$9.00 a ton. Were the driveway graded above the watermark with some material that would pack hard a portion of the coal that is lying around loose could be gathered up; and further, were the driveway thus graded it would prevent the teams from becoming well-nigh stalled.

The thought of fire should be an incentive to clean up the yards in the spring. Fire is no respecter of persons or things, and when it catches in the rubbish of a yard it will as soon run toward the piles of lumber as away from them. A yard was seen the rear end of which on a Sunday was overrun by fire, that presumably caught from a locomotive on a track that ran immediately in the rear of it, and that by sheer good luck exhausted itself before the piles were reached. This yard is on the edge of the town, well removed from all other buildings, and as it is presumed that all the people of the town were at church when the fire started, the smoke was not observed. The fact remains, however, that had there been no dry grass and other litter there would have been no fire. It might be further stated that no one knows how many yards have been burned from a like cause.

At first blush it might appear that there would be no necessity for spring cleaning in the average inclosed shed, but such is not the case. When the weather is so cold that a yardman shivers every time he leaves his warm office and goes into the shed, and there is little or no trade, every splinter, stray lath or shingle is not removed as it is at a time when there is activity around the premises and all feel in a mood to do something. Those in charge are prone to overlook the litter, thinking it is not just the thing when nothing is doing to be slicking up, anyhow. As trade is resting so things in general are permitted to rest.

A dealer who aims to do things about right was heard to remark that a waggon on which gravel could be drawn, a scythe, a shovel, a hoe and a rake were as necessary around a lumber yard as an automobile, a letter press and a fountain pen.—American Lumberman.

Higher Export Duty on Pulpwood.

A deputation composed of pulp and paper manufacturers of the Province of Quebec waited on the Cabinet Ministers recently to seek for the adoption of measures to counteract the effect of the Payne tariff on the export of pulpwood. Because of the failing supply of pulpwood in the United States, the Payne tariff proposes to put pulpwood on the free list but to maintain the duty on manufactured pulp and paper. The Quebec manufacturers demand that the Provincial Government increase the stumpage dues on pulpwood for export, which practically amounts to an export duty, to such an extent as to make exportation of pulpwood practically prohibitive. In this way, it is hoped that the paper manufacturing industry will be protected in the province, and the United States consumers compelled to buy their manufactured pulp and paper in Quebec, or else bring their capital over to establish other paper factories in the province. As to the exact mode of campaign, the members of the deputation were not agreed, and the Premier asked them to try to come to a decision among themselves, and then return. The delegation consisted of Hon. N. Garneau, Wm. Power, ex-M.P.; F. A. Geidron, M.L.A.; Carl Riordon, and representatives of the Booth and Eddy mills.

Protect the Canadian Manufacturer.

One of the visiting Washington shingle manufacturers was asked why it was, in his opinion, that Vancouver shingles could be sold in the United States market, duty and all, in competition with the Washington shingles. This United States manufacturer freely admitted that it was simply because the British Columbia grading was better and that shingles were made on the Canadian side with greater care. In fact, the British Columbia No. 2 grade was as good as the Washington No. 1 grade, so that the Canadian shingle was actually cheaper than the American shingle. This was becoming generally acknowledged to be the fact, and he was sorry to say that some unprincipled dealers were actually labelling their American shingles "the B. C. Brand." It has been suggested that all the shingle manufacturers in British Columbia copyright a trade mark in all the civilized countries. An infringement of this copyright by any foreign mill guilty of such an act, would then be a serious matter.

The lumber interests in New Zealand are agitating for a duty of \$5 a thousand feet on Douglas fir and Oregon pine, which is imported from British Columbia and Washington State. The trade does not amount to more than 25,000,000 feet at the present time, but in New Zealand, with its population of a million, that is regarded as a considerable importation. The New Zealand Government has appointed a commission to take evidence throughout that Dominion and report in July.

The librarian of the Toronto Public Library has offered to place at the disposal of manufacturers an entire section in the new reference library on College street for the catalogues of Canadian firms, and in cases where the catalogues are not properly bound, to bear the expense of having them bound.

WE ARE IN THE MARKET FOR CROWN GRANT Timber Limits. Must be well located and good timber. Either British Columbia or Pacific Coast. JOHN C. SPRY, Dealer in Timber Lands, 1230 Corn Exchange Bank Building, Chicago, Ill. 11

For Sale

LOTS 7, 8 AND 9 TOWNSHIP OF PERRY, about 3 miles west of Emsdale Station, Grand Trunk Ry., containing approximately 400,000 ft. Birch, 150,000 ft. balsam and Spruce, 200,000 ft. Hemlock, large quantity of Beech and Maple and small amount of Elm and Black Ash; clear title. Good winter road to station, short route. Machinery and engine available for portable mill. Price \$3,000. Apply Box 716 CANADA LUMBERMAN, Toronto. 9

Important Sale of Valuable Timber Limits, Saw Mills, Logs, etc.

SEALED TENDERS WILL BE RECEIVED up to and including TUESDAY, THE FOURTH DAY OF MAY, 1909, for:

1. The timber berths comprising the township of Roberts and all of the township of Kitchener, with the exception of three square miles thereof, in the district of Algoma. These berths also are virgin limits of excellent white and red pine very convenient to operate and close to the railway and will be sold together or separately.

2. Timber berth known as "107" on the Spanish river in said district, the license therefor including all woods. This is an excellent berth convenient both to railway and the Spanish River.

The highest or any tender not necessarily accepted. For terms and further particulars, including estimates apply to:

LEES, HOBSON & STEPHENS
Vendor's Solicitors,
Hamilton

Sale of Valuable Timber Limits

THE UNDERSIGNED ARE INSTRUCTED to sell by Public Auction en bloc, at the Russell House, Ottawa, on September 30, 1909, at 2.30 p.m., the following Timber Limits situate in Block A, Upper Ottawa, Province of Quebec, viz:

Berth 676 Licence No. 580 of 1908-09, south half Lot 16, Range 4, Block A, 25 square miles; Berth 677, Licence No. 581 of 1908-09, south half Lot 14, Range 3, Block A, 21 1/4 square miles; Berth 611, Licence No. 582 of 1908-09, Grand Lac Victoria, River Ottawa, 19 square miles; Berth 678, Licence No. 583 of 1908-09, south half of north half Lot 16, Range 4, Block A, 9 1/2 square miles; Berth 679, Licence No. 584 of 1908-09, north half Lot 16, Range 3, Block A, 15 1/2 square miles; Berth 680, Licence No. 585 of 1908-09, north half Lot 15, Range 3, Block A, 18 square miles; Berth 681, Licence No. 586 of 1908-09, south half Lot 17, Range 5, Block A, 25 square miles; Berth 682 Licence No. 587 of 1908-09, north half Lot 16, Range 5, Block A, 25 square miles; Berth 696, Licence No. 588 of 1908-09, north half Lot 17, Range 4, Block A, 25 square miles. Total 183 3/4 square miles.

These limits are all surveyed and are easy of access by a good roadway from Ville Marie to their location. They comprise some of the best pine and pulp wood areas in the Province.

Terms—10 per cent. of the purchase money to be paid down at the time of sale, and the balance in equal instalments at one (1), three (3) and six (6) months thereafter with interest at the rate of 5 per cent. per annum.

For further particulars and conditions of sale apply to the Royal Trust Company (Ottawa Branch), and to Code & Burritt, Solicitors, Carleton Chambers, Ottawa.

Dated this 31st day of March, 1909

THE ROYAL TRUST CO., Ottawa,
Trustees of Sale.

PINE LIMITS IN GEORGIAN BAY DIS-trict. Also limits in other districts. Address Box 711, CANADA LUMBERMAN, Toronto. 10

Tenders for Tug and Scow

TENDERS WILL BE RECEIVED FOR THE Tug Vixen and Scow or either up to noon 15TH MAY, 1909. Dimensions of Tug: Length 50 ft.; Beam, 13 ft.; Draught, 4 ft. 6 in.; Hull in fair condition; First-class engine and boiler, size of engine cylinder 12 x 14 inches, high pressure, carries 125 lbs. steam; Speed, about 12 miles per hour. Carrying capacity of Scow, 60,000 ft. green lumber. The highest or any tender not necessarily accepted. All tenders to be addressed to LLOYD & SCULLY, Sault Ste Marie, Ont. 9

Market for Staves.

A report by U. S. Consul Halstead as to beer, wine, and whiskey staves in the English market at Birmingham, says:

Large timber merchants here inform me that there will be no sale for whiskey or wine staves in this district, and my own information confirms this statement, inasmuch as no wine or whiskey is manufactured here. There are, however, a number of breweries, and if the oak staves are strong and non-porous and the prices right, it should be possible to find a market for them. The stave used in this district comes from Memel on the Baltic, in Eastern Prussia, and about 20 miles from the Russian border. It is called the Memel stave, from the port whence shipped. As whiskey is a volatile spirit and evaporates quickly, the oak must be non-porous, while for wine barrels the oak may be a little more porous and for beer even more so, but the closer the grain of the oak and the less porous it is the better market is found for it.

Oak staves for the English market are cleft (split) and in what is called "feather" shape. Beer barrels vary materially in size in England. They include the barrel, firkin, and hogshead sizes, seldom the American keg. The staves range from 3 inches thick by 6 inches wide, 2 1/2 inches thick by 5 inches wide, 2 1/4 inches thick by 4 1/2 inches wide, and 2 inches thick by 4 inches wide; and the lengths run from 17 to 19 inches, 20 1/2 to 25 inches, 32 to 34 inches, 50 inches, 56 inches to 72 inches. The staves are sold by the count, 1,200 pieces comprising a mill.

One firm suggests that inquirers send over a package of, say, three dozen staves of the 32 to 34-inch length and 2 1/4-inch thick by 4 1/2-inch in section, so that they may make them into a barrel and see how they work and so be able to form a better opinion of their utility for the English market. Of course, they could not charge for such samples, and should regard the expenditure as outlay for experimental purposes to test a market. If inquirers send a better quality of staves than the average run of the staves they produce they will make a most serious error, for one of the complaints made against American firms endeavoring to enter the English market is that samples are sometimes of much better quality than the goods or other articles which are ordered with these samples as a criterion of quality, style, etc. If they send better

samples than the average run of their oak and then obtain an order and the staves are inferior to the samples, they will not only immediately destroy prospects of selling staves, but will prejudice the market for American products to the extent that the firms who are dissatisfied with the quality choose to speak of their dissatisfaction.

It is stated that brewers both make their own barrels and purchase them from coopers, and that the concern in question are specialists in cooperage. I believe that if the oak is of the requisite consistency and of a non-porous character and if inquirers can ship it so as to meet the prices of the Memel oak that they would find a continuing and excellent market here. However, in quoting prices they must quote prices delivered, say at Bristol, from which port the staves can be brought by water—river or canal—to Birmingham.

Value of Timber Lands.

Timber lands are bought and sold on the judgment of the parties most concerned. If the buyer wishes to take into account the by-products, such as cordwood, tannic acid wood and bark, he, of course, is at liberty to do so and he is privileged also to figure them on a basis of so many feet of lumber to a cord, but this privilege is not a custom. That is, if the seller guarantees a certain tract of land to contain so many feet of merchantable timber he can not figure in the bark or the cordwood or any other product which may be taken off. Some of the log rules are very specific in stating the measurement of the logs should be taken inside the bark at the small end, and this rule would absolutely exclude the bark from consideration.

In the actual work of estimating a tract of timber no log rule is employed. The ordinary cruiser does not measure the diameter or height of the trees. His report is merely the estimate of a man trained in the value of timber. It is arrived at in very much the same way as the value of a drove of steers. Those who buy beef cattle are able to judge what a bunch will average and they buy them on an average basis. The timber cruiser is guided in much the same manner. He takes into account the size and height of trees, not as individuals but as averages, and also he takes into account the defects, whether the trees are thrifty or whether they have matured and are on the decline. There are a number of signs which serve as a natural index to him in reaching an opinion.

Review of Current Trade Conditions

Ontario.

Reports vary as to the actual condition of the markets in Ontario, but there is no difference of opinion as to the fact that there might be a much better demand and more satisfactory prices. Pine is steady, although for 1x12 common the prices are firmer on account of scarcity. It is now bringing from \$30 to \$32. Spruce mill run is also reported scarce and from \$1 to \$2 up, at \$20 to \$22. There is quite a difference of opinion as to the prevailing conditions in hemlock. Eighteen-foot lengths are reported to be scarce and to have advanced from \$1.50 to \$3; the present quotation being \$20 to \$22. In regard to other lengths of hemlock, some manufacturers are also reporting a possible scarcity. Dealers, however, are holding back in the belief that the production this season will be large. Red pine is firmer and selling at higher prices. The quotations are from \$31 to \$33 for clear and clear face, and \$22 to \$24 for common, these figures being an advance of from \$2 to \$3. The lower grades of pine and spruce in the Ottawa Valley are in poor demand at present. Other grades are firm. There has been so much spruce offering recently that the prices of white pine declined. The new cut of white and red pine, however, is finding a fairly good demand at last year's prices. There is less demand at Ottawa for lath than there was a few months ago. No. 2 white pine are bringing \$2.50 per thousand, and white pine mill run is selling at \$3. Choice No. 1 white pine lath are selling at \$3.50. Business in hardwoods is going along pretty well and a noticeable improvement is reported in several lines. Thick stock is holding up well, but there is a slight decline in the demand for thin stock. Quartered oak is pretty firm, and scarce. No drop is looked for until the new stock comes forward. Basswood, elm and ash are doing well. Thick brown ash, 1 1/4-inch and up, is rather scarce and the demand for it is firm.

Eastern Canada.

Logs from points along the lower river have commenced to arrive at St. John, and the demand for them is brisk. Prices are ranging from \$12.50 to \$12.75 per thousand feet, delivered St. John, with two-thirds prices for battens under ten inches. Stocks of spruce deals at St. John for export to New York markets are very light. There is very little trading in "American" stocks. Lath are unchanged and local stocks are well cleaned up. Spruce slab lath will sell at present at \$2.75 to \$2.85 per thousand for dutiable f.o.b. steamer St. John. The demand for spruce at New York is better than it has been for a number of weeks but there is still room for improvement in the prices. The outlook, however, is promising, as stocks in the yards are quite light. The demand has been better for short spruce than for the other lines. At Boston, spruce has become a little firmer during the last fortnight. Sales at \$24 base have become rare. Most of the mills are asking higher prices. \$24.50 was asked a week ago and now \$25 is asked. Spruce lumber for mill construction is in better demand. Random is quiet although a trifle firmer. Boards also are firmer. For matched boards \$22.50 is being asked, but few buyers will pay more than \$22. Shingles at Boston are quiet. Dealers have been disturbed by a bill before the Massachusetts Senate to change the count of shingles. This, however, has been put over to the next sitting and may never be a source of trouble again. The best cedar extras are quoted at \$3.90 to \$4, but few sales can be made at the top price. Some have been made at \$3.85. Demand for lath is not heavy at present.

Great Britain.

The London spot market is suffering from a lack of orders. The outlook at present does not promise any improvement. Forward buying

continues on very moderate lines, as shippers are not disposed to reduce prices. Dock deliveries have been quite small. At Liverpool, trade has shown a decided improvement and a general feeling of hope prevails. Enquiries are more numerous. It is reported that operations have been commenced by spruce deal importers for future delivery, but it is still difficult to get at the prices arranged. The small shipments from St. John, N.B., and Halifax, N.S., are bringing about steady prices, and the market remains firm without any indication of change. The demand for birch has improved and values are slightly better, especially for planks, of which the stocks are not too large. Stocks of birch logs are sufficient for the present demand, although most of them contain a large proportion of shaken wood. Values of Quebec pine are unchanged and shippers are firm regarding prices. At Manchester, the market is still very dull although prices keep up, notably for spruce, flooring and red wood. Floorings have been bringing £9 2s. 6d., basis c.i.f. At Glasgow, there is no change, worthy of note, in market conditions. The prevailing dullness, however, does not seem to have any appreciable effect upon values, which are well maintained. It is thought that unless business improves considerably, of which there is not much evidence at present, the import from Montreal and Quebec will be light.

United States.

The last fortnight has witnessed only a steady market and without much activity, although in a few lines a slight improvement is reported. The same old story is told of prices being at rock bottom level, but it does not seem to have a great deal of effect. Retail yard owners, however, have had ample opportunity to size up the situation and purchase stock in accordance with it. Their buying demands have therefore become much heavier. A favorable indication is afforded by the fact that many retail orders are accompanied by a stipulation that delivery must be prompt, and in many cases the orders have been followed by wire to rush them along. Railroad buying is improving in volume. There is a good demand for yellow pine.* At Chicago, there is a decidedly better business in white pine, as the factories have again come into the market. Norway pine, however, is suffering from the competition of yellow pine. Country yards and mill work factories are increasing their demand for lumber. The best demand is for the upper grades and prices are well maintained. There is a good supply of lower grades but the demand is dull. At New York, white pine wholesalers have been doing a better business during the past fortnight, but prices are still disappointing. The improvement in the building situation is so gradual, that the factory trade is holding off. At Buffalo there is an improvement in the white pine trade, and every mail is bringing in orders. Dealers expect the demand to be normal early in May. In Chicago there is an indication that the demand for white cedar poles will soon be quite active. Orders for fir at Chicago are scarce, as at present it cannot compete with yellow pine, except for long length stocks. There is a small demand for car-siding and plank. The coast trade is reported in fair condition. Quotations on spruce remain firm. Factory stock is in considerable demand. At Portland, Ore., it is reported that enquiries have increased materially during the past week but that prices are not tempting. The tie market is fair, with indications of an early improvement. Shingles are reported unchanged and logs are quoted at \$10. At Chicago, there is a better demand for red cedar shingles, the present quotations being five cents in advance of those a fortnight ago. Supplies are low and prices may go higher. The demand for white cedar shingles is dull. Mixed lath are in good demand. No. 1 and No. 2 white pine lath are in fair request. No. 1 hemlock lath is in light supply and No. 2 is plentiful.

Market Correspondence

Ottawa Outlook Continues to Improve.

Ottawa, April 28.—Dulness in buying has had an effect on the prices of low grade pine and spruce in the last fortnight, but generally speaking lumber quotations are firm. The decline in white pine prices is largely attributable to the abundance of spruce offered round \$17 per thousand. Some manufacturers of boxes believe spruce makes a tougher box than does cheap white pine, which is often subject to rot. Nevertheless heavy sales are reported of the new cut of white and red pine at practically last year's prices. Best chances are offered the buyer who would be able to take a big quantity of the common grade of pine stored in the yards since last year with the hope of a stronger market. Pine culls are now selling at from \$17 to \$19, or about the same as red pine log run, mill culls out, and spruce stocks 7, 8, 9 inches. All these sorts are plentiful in Ottawa Valley yards, and only an active buying will keep prices firm.

Hopeful signs of the coming season are the ever increasing volume of building permits being issued locally, and the fact that outside conditions in Canada are reported to lumber dealers to be similar. Compared with a year ago there is a levelling of the prices of all materials used in building and the labor market is so steady that contractors are not afraid to begin work on an extensive scale. Most of the building trades of Ottawa have notified their employers that they will work for the same rate of wages as they did last year. Consequently the local demand for lumber is beginning to assume a much better aspect than it did at this time in 1908. The improvement, however, seems to be confined chiefly to points in Canada, as buying centres across the border have not yet recovered from the congestion which began in the midsummer of 1908.

Lath is not quite so active as a couple of months ago. A lot of No. 2 white pine is selling at \$2.50 per thousand and white pine mill run at \$3. The choice No. 1 brand of white pine, produced largely in Booth's mill, is still firm at \$3.50 per thousand.

The Shepard & Morse Lumber Company began sawing on April 19th, giving employment to 300 men, many of whom are kept busy loading cars for export. This was the first mill to start in the Ottawa Valley, and was followed soon after by Fraser & Company, at Deschene, two-thirds of whose output will be for the Shepard & Morse Company. The other big mills have arranged to start about May 2nd. J. R. Booth is making extensive alterations in the shape of new flumes, which delayed the starting of his mill for about a week. Mr. Booth has a very large delivery of pine logs near his mill pond, which were brought by train during the winter but he will not manufacture these until about midsummer. They will improve by lying in the water, and in the meantime he has enough material from last year's drive to keep the mill going. The wages for mill hands are exactly the same as last year, ranging from \$1.50 per day to \$3.50, according to efficiency of the employees and the class of work. River drivers, however, have been hired around \$35 per month, or an average of \$5 less than in 1908. None of the logs have yet entered the main stream, but work is proceeding briskly along the tributaries. The lumbermen believe that they will be protected against delays in getting logs to the mills which have hampered sawing operations for some years past. The Upper Ottawa Improvement Company, in addition to putting new tugs into commission, are constructing an immense storage boom at the Quyon, which will hold close to 800,000 logs. As a result it will be possible during the coming summer to work the three Quyon gaps to their full capacity. In other years, only two could be worked at the best, and when the water was low it was even difficult to operate a single gap.

Official records taken at the Experimental Farm at Ottawa show that the snowfall for the past winter was nine feet, or two feet less than in the winter of 1907-8. Eleven feet of snow, however, was a record for many winters and the volume of water resulting destroyed the value of the water power at the Chaudiere last spring for nearly a month. This was followed by a period of the lowest water on record and an equally serious shortage of power. An Ottawa lumberman who has just been to Lake Temiskaming says that despite the smaller snowfall last winter there is a volume of water partially melted which will do serious damage if it does not pass off gradually. On the north side of the Ottawa river the tributaries have not begun to swell very rapidly and so far the main stream has been bringing down only southern waters. Nevertheless, the Ottawa river at the foot of the Rideau locks is now 18 feet deep, compared with 15 feet on the same date last year. The conservation dam which is to be provided by the Government at Lake Temiskaming is only being commenced, so that a sudden flow would result in the same tremendous waste of water as occurred a year ago. Just at present the lumber and pulp manufacturers feel quite uncertain as to the prospect for water power, but are hoping for the best. In any case, the condition of the Chaudiere will be greatly improved as a result of the new concrete dam built there during the low water period of last season.

It is reported that W. C. Edwards & Company, Ottawa, will have

cut 75,000,000 feet this season. This exceeds the firm's last year's cut. J. R. Booth's cut will amount to about 125,000,000 feet of logs, besides large quantities of pulpwood, etc.

Logs Commencing to Reach St. John.

St. John, N.B., April 26.—The present fortnight has shown some important features in the lumber trade and industry. One of these is the cessation of the sailing of the winter liners from this port, which will bring to an end for the season the shipments of parcels of spruce deals to the United Kingdom. The fortnight has also brought the finale of all manner of woods operations in the way of getting or hauling logs throughout the province. The setting in of the warm weather has also caused a cessation of operations at the portable plants with few exceptions. This circumstance is important in that it removes an important source of supply for the spruce deal and lath markets.

The local press have already published estimates of the quantities of logs which will come down the St. John river for consumption at local mills during the summer. Any definite figures are of a rather premature nature. To quote at this time of year the figures covering the quantity of logs cut in the woods as the quantity which will be received at the mills is often very misleading. So much depends upon conditions of a very uncertain nature that at this early date little can be known of how many logs will be available. The total estimates of the logs cut for consumption at Fredericton and St. John mills is in the vicinity of 105,000,000 superficial feet, cedar, spruce and pine. Of this quantity at least 20 per cent. is cedar. The quantity of pine would not be more than a few hundred thousand. The prospects for stream driving the logs are so far of a favorable nature, although the ice is scarcely out of the rivers in the northern part of the province and the work of stream driving will not begin in earnest before the 1st of May. The snow in the woods in the northern sections has melted but little and it is expected that when it begins to melt it will do so with rapidity and that a sufficient head of water will result to make clean or fairly clean drives.

The first logs from points along the lower river reached this city during the past few days. The crop of these bank logs, while not important in figuring up the year's receipt of logs, are quite important at this time of year when it is too early for the up-river logs, and when, as a general rule, raw material is scarce and hard to buy. Bidding is consequently somewhat spirited and prices have ranged from \$12.50 to \$12.75 per thousand feet delivered at St. John, two-thirds prices for bat-tens under ten inches.

The local output of spruce deals for export to the New York markets during the coming season promises to be about the average in quantity. Local holdings in this line are remarkably light, having been practically cleaned up during the late winter and early spring. Two mills are sawing "American" stock at present writing. Should the driving season be a successful one and the logs come out, the prospects are that the logs which reach this port from State of Maine logging operations will aggregate from 24,000,000 to 26,000,000 superficial feet, which figures will practically represent the output of the local mills of "American" long lumber between May 1st and the close of the sawing season of 1909.

Locally there is very little trading in "American" stock; so few are the transactions that it is practically impossible to name a figure that would correctly gauge the local situation in this respect.

The lath market has shown no change of importance during the past few weeks. Local people are well shipped up. The output of the winter sawing season of the portable mills is practically cleaned up. Shipments from this port will be very light during the remainder of April and during the month of May. Local prices have held their own and have shown no sign of breaking. An enquiry for prices would bring a quotation on spruce slab-lath of \$2.75 to \$2.85 per thousand for the dutiable article f.o.b. schooner St. John.

Freights by schooner on lumber to New York are quoted at \$3.00 per thousand feet on long lumber and 60 cents per thousand on lath. To Boston the prevailing rates are \$2.50 on long lumber and 25 cents per thousand on cedar shingles.

The Canada Lumberman Appreciated Everywhere

Messrs. J. & R. Miller, Ingersoll, Ont., writing the "Canada Lumberman," say: "We have taken your paper for many years, have found it of much advantage in our business and would not do without it for twice the price, if only in business for one year. Wishing you prosperity in the years to come."

John H. Marr, of Hamilton, Marr & Company, Govan Saw Mills, Govan, Glasgow, in a letter renewing his subscription, expresses his opinion of the "Canada Lumberman" as follows: "I continue to appreciate your journal very much, and the alteration you have made during the past few years. Wishing you every success."

The imports of Canadian hewn wood at Birmingham, Eng., during February, 1909, amounted in value to \$19,055, against \$11,195 in February, 1908. The imports of sawn wood amounted in value to \$263,310, as compared with \$283,310 in February, 1908.

DeLoach "Prince" Hand Feed Shingle Mill

JOHN H. CRANE
Manufacturer of Lumber and Shingles
DELOACH MILL MFG. CO., BRIDGEPORT, ALA. MONTEREY, ALA., JULY 2, 1907.

GENTLEMEN,—I purchased from you in 1905 a "Prince" hand feed shingle machine. I have operated it and find it all you claim for it. We cut at the rate of 30,000 shingles in 10 hours and made first class shingles. I consider your machine a very light running machine. If I wanted another hand machine I would certainly buy a DeLoach Prince.

With best wishes for your success, I am
Yours very truly,
JOHN H. CRANE.

New Model

Diamond Shaking and Dumping Grate Bar

Is a Perfect Shaking and Dumping Grate Bar.

Built and Perfected by Experts and manufactured of the best grade of Iron.

THE demand for the Diamond Grate has increased by 50 per cent. during the last 2 months and is giving splendid satisfaction to all our customers. Burning all grades of fuel with the very best results. All live Mill Managers and Engineers would do well to consult us when requiring new Bars. These Grate Bars are warranted not to be an infringement on any prior patents. We stand behind our customers and guarantee them in the unmolested use of our own invention.

We make a specialty of Boiler Setting and repairs to Boilers, employing none but expert workmen. We handle Boiler Flues, both new and welded, at lowest prices.

A post card or personal enquiry will bring a prompt reply.

Indiana and Michigan Association's Annual Meeting.

The ninth annual meeting of the Northern Indiana & Southern Michigan Lumbermen's Association was held recently at the Hotel Oliver, South Bend, Ind.

President Richter in opening the meeting congratulated the officers on the large attendance as furnishing an indication of the active interest felt by the members in their organization. He spoke briefly of the work that had been done by this association, stating that eight year ago 30 charter members had met at South Bend and organized the association, the charter of which was decidedly limited. At that time competition between members of the retail trade in the territory covered by this organization was of a decidedly unfriendly character. To use the president's words, "when competitors met it was with blood in their eyes and their hands on their hip pockets."

Met. L. Saley, of Hampton, Iowa, read a paper on collections, in which he quoted a number of figures based upon estimates of the average credits carried by the retail yards and the estimated number of retail yards in the United States. He said it was his belief that, on a conservative estimate, \$4,000 would represent the yearly credit of the average yard and that the number of yards in the United States is 25,000. This would bring the amount of money carried by the retail lumbermen to a surprising total of \$100,000,000, which at an interest rate of 6 per cent. would mean that the credit system employed by the dealers cost them each year \$6,000,000. Mr. Saley stated that in Salt Lake City the retail lumbermen have an agreement that all lumber bills should be paid within fifteen days from date of delivery and that a notice to this effect, signed by all of them, appears on the walls of their respective offices.

W. G. Hollis, secretary of the Northwestern Lumbermen's Association gave a short address upon the catalogue houses and what they are doing to make life miserable for the retail lumbermen. Mr. Hollis said that one catalogue house was sending out 1,400 travelling salesmen; young men recruited from the farming districts, and therefore especially well able to meet and talk with farmers. Since January 1, 1909, this house has sent out 9,800,000 2-ounce catalogues, the bulk of which has gone east of the Mississippi river.

H. C. Searce, secretary of the Indiana Association, read a paper on the proposed parcels post measure.

Mr. Searce quoted from an address delivered October 12, 1907, by former Postmaster-General Meyer upon the desirability of establish-

ing in an experimental way, at least, a parcels post system on the rural routes throughout the United States. He stated it as his belief that the benefits accruing to the farmer from the establishment of a parcels post system were overestimated, inasmuch as the latter makes frequent trips to his town to take in his produce, at which time he buys his groceries and anything else he may need. Certainly he would not pay 2 1/4 cents a pound to have his butter, eggs, and poultry hauled by the Government to his dealer. The advantages of a parcels post to the mail order houses were obvious. A retail dealer in a town would derive no advantage, because the expense of getting up catalogues and sending them out to the trade he is in position to reach would be disproportionate to the amount of business he could hope to secure from them. The business man and the laborers employed in a town were customers of the farmer, furnishing a home market for his products, and it was to his interest to preserve this market, which certainly he would not do by giving his own business to an outside concern. The merchants should appoint committees to meet and talk with farmers and their associations as they would with visiting merchants or professional men, in order that the question of co-operation and conservation of mutual interests might be made plain to them. Retail lumber dealers were opposed to the parcels post plan, because they believed it would be inimical to the best interests of the communities in which they did business, as it would have a tendency to give the mail order houses an immense advantage and result in blighting the growth and business of the towns and villages.

The president brought up the question of packing red cedar shingles, and some discussion was had as to the condition in which the shingles were received. The president read the grading rules and asked for expressions of opinion by those present as to whether or not shipments were up to these rules. Several of the members related experiences in which they had registered complaints to the shippers and, their protests not having been allowed, had sent sample bunches to the Pacific Coast Shippers' Association office at St. Paul. Of the cases mentioned, all but one had been settled by reports from the office allowing practically as much as claimed by the dealers, which adjustments had been apparently satisfactory to the shippers.

Chairman Taylor, of the nominating committee, presented the following names:

President, H. S. Stanfield, South Bend, Ind.; Vice-President, W. F. Judd, Dowagiac, Mich.; Secretary and Treasurer, J. N. Frank, Mishawaka, Ind. These officers were agreed to unanimously by the meeting.

Are You Satisfied with Your Insurance?

The lumber trade outranks all other lines of business in the maintenance of its own fire insurance facilities. Many lumbermen turn over their entire lines to be supervised by this office reaping a substantial saving by so doing.

If you are looking for absolute protection at rates consistent with the general character of your risk we invite your careful investigation of the advantages offered lumbermen through this office.

EDGINGS

Ontario

S. A. Metler, St. Catharines, proposes to establish a basket and box factory at Beamsville, Ont.

The Lippert Furniture Company, Berlin, Ont., is thinking of locating a factory at Owen Sound.

The Canadian Pacific Railway is reported to be considering the establishing of a plant for creosoting its railway ties.

The East City furniture factory Peterborough, is to be enlarged during the coming summer. An addition one-half the size of the present building will be built to the rear.

The R. Laidlaw Lumber Company have about two million feet of stock at upper lake ports which they expect to take to their Buffalo yard as soon as the lake boats can get through.

The ratepayers at Thessalon, Ont., have approved a by-law to loan \$10,000 a year to a sawmill concern which will expend \$25,000. F. H. Lawrence, of Ekoba, is promoting the company.

The Hammermill Pulp & Lumber Company, Toronto, has been incorporated with a capital stock of \$40,000, to carry on the business of lumber and paper manufacturing in all its branches.

A report from Wellnad, Ont., says that W. J. Hickey and I. H. Lavalee, of Orillia, Ont., will open a lumber yard, planing mill and box factory in Welland, under the name of the Building, Lumber & Supply Company.

The St. Lawrence Paper Mills, Limited, Cornwall, Ont., has been incorporated with a capital of \$150,000. Incorporators, F. V. Johns, G. H. Sedgewick, L. Davis, W. G. Anderson and J. W. Heffernan, all of Toronto.

The New York sales office of J. R. Booth, Ottawa, Ont., has been removed from 23rd street to the Marbridge Building, 1326 Broadway, suite 646, where the firm's local representative, E. E. Watrous, will hereafter make his headquarters. This office will handle a general line of Canadian pine and spruce.

An accident attended with considerable cost and some danger occurred at the sawmill of the Knechtel Furniture Factory, Walkerville, recently, when the twisting of a rist pin in one of the shafts wrecked the engine and caused a temporary close down of two weeks. Fortunately, no one was in the engine room at the time.

According to a Toronto report the St. Raymond Paper Company, which has had insufficient working capital to carry on operations successfully, is likely to be reorganized. At the request of the company, the courts have appointed a liquidator, in the person of Frank Powell, who, with an advisory board of five inspectors, now has the matter under consideration.

A manufacturing plant will be established in Fort William, Ont., the by-products of which will be sufficient to furnish material for the creosoting of millions of railway ties annually. The plant will have a far-reaching effect on the supply of lumber, as a creosoted tie will outlive several ordinary ones, and the demand for ties under present conditions is making a great demand upon the Canadian lumber supply.

The main building of the Colonial Woods Products Company, at Thorold, Ont., which is 100 by 45 feet, is completed. Water will be obtained by means of a tunnel which has been constructed under the old Welland Canal. The new pulp mill will be rushed to completion. It will be considerably larger than at first contemplated. The Thorold Pulp Company has completed extensive repairs to its mill, and is ready to start work again.

The Northumberland Paper Company, of Campbellford, Ont., which has just been incorporated, and does a large business in building paper and box board, will erect a pulp mill for the manufacture of ground wood pulp, which will have an output of fifteen tons per day. The mill will be located on the Trent river, at Campbellford, where there is an abundance of water power all the year. The company has heretofore bought its pulp from outside sources.

Extensive improvements have been made to the sulphite fibre mills at Hawkesbury, Ont., of the Riordon Pulp & Paper Company. These include a 600 horse-power boiler and stoker, a set of twelve Packer screens in the small mill, three additional screens now being in process of completion; a save-all, making the third of its kind; a new system of ventilation for the blow pits; a new acid storage tank, with a capacity of 350,000 litres; a new wet machine, a new Whiteway machine for one of the paper machines, and two beaters.

Eastern Provinces

The sawmills at Halifax, N.S., owned by L. N. Frechette, were recently destroyed by fire at heavy loss.

The sawmills in Halifax Village, Que., owned by L. J. Frechette, ex-M.P. of Compton County, have been destroyed by fire.

About 7,000 tons of pulp have been carried over the Halifax & South Western Railway so far this season, to be shipped to England.

The plant of the St. George Pulp & Paper Company's lumber mill, at St. George, N.B., is to be enlarged by the installation of several lath and shingle machines. The prospects for a busy season are most promising.

The Austin Lumber Company, Limited, Cap St. Ignace, Que., has been incorporated with a capital of \$95,000. Incorporators, W. Marler, E. Choleddé, B. Hubert and J. E. Lemire, all of Montreal, and S. M. Marler, of Drummondville, Que.

Halifax lumbermen are largely interested in a syndicate of Toronto capitalists who have purchased large areas of pulp lands in Newfoundland. It is understood that in the near future the syndicate proposes to establish large pulp and paper mills.

The export of lumber from St. John, N.B., to the United States for the quarter ending March 31, 1909, is the largest in the port's history. The value of the product of American logs in that period is given as \$224,881.99, as compared with \$42,539.32 for the corresponding period in 1908. The total value of exports to the United States for the March quarter, 1909, was \$858,716.39, as compared with \$280,700.21 in 1908, a gain for this year of \$578,016.18. The exports of lumber to transatlantic ports for the first quarter this year show a

falling off of 7,500,000 feet in deal shipments while there is a slight increase in the birch timber trade.

Sir William Van Sorne, president of the Laurentide Paper & Pulp Company, announces that he is about to establish at Grand Falls, N.B., the largest pulp, paper and sawmills in Canada. Sir William recently left for England to interest English capital in the scheme. He states that this project was put forward a number of years ago by the Grand Falls Power Company, the other interests being held by the estate of the late United States Senator Proctor, Mr. Underwood, vice-president of the International Paper Company; William Mackenzie, and R. B. Angus. He intimated that the delay in carrying out the plans had been caused partly by troubles concerning the extension of the charter, partly by the trade depression, and partly by another concern which had tried to secure control of the situation at Grand Falls. His company had been willing to sell out, but the other company had failed to materialize. The result is that the original scheme will now be put through as soon as possible.

British Columbia

A shingle mill is to be erected at New Westminster by W. Beach, of Seattle.

A large pulpwood and sawmill will be erected by the Powell River & Construction Company opposite Texada Island, British Columbia.

A wealthy syndicate, whose personnel has not yet been divulged, plans to build large sawmills at Esquimalt Harbor at an expenditure of over \$300,000.

With the permission of the British Columbia Lieutenant-Governor-in-Council, export may now be made of piles, telegraph and telephone poles, ties and crib timber.

W. J. Holcomb & Sons have completed their mill near Rossland. They own 5,300 acres of timber on Violin lake, and will employ sixty men in the sawmill and woods.

Messrs. DeBeck and Tait, of New Westminster, have bought 1,400 acres of Crown granted land in the Langley district, on the Great Northern Railway line, for \$30,000, and will erect a mill.

A. W. Dickenson, of Arrowhead, has contracted with the Gibbons Lumber Company to put in about 30,000,000 feet of logs from the company's limits on Pingston creek, covering a period of two to three years.

The Victoria Lumber & Manufacturing Company, of Chemainus, B.C., have opened a yard in Victoria and will cater to the local trade. Heretofore sole attention has been paid to the export and domestic business.

The Fraser River Lumber Mill at New Westminster recently broke its own and probably the world's record for cut in a single day. The total amount of lumber handled during the day of ten hours was 418,460 feet.

D. J. Cromwell, of Vancouver, formerly of Portland, Oregon, has sold 38 timber berths near Jordan river for \$160,000. Mr. Cromwell is a member of a New York syndicate and the sale is to a number of Minneapolis lumbermen.

The Arrow Lakes Lumber Company will begin shortly on the construction of a logging railway from Galena Bay into their timber at Galena Pass. The railway will be four miles in length and logging operations will be continued all summer.

The following companies have been incorporated under the laws of the Province of British Columbia: Fort George Lumber & Navigation Company, Limited, capital \$50,000; Nanoose Lumber Company, Limited, capital \$25,000; Rivers Inlet Lumber Company, Limited, capital \$1,000,000.

A deal has been completed by Hillis Bros., whereby 30 sections of timber land at San Juan, B.C., change hands. These lands were held by Andrew Wright and a local syndicate. They have been sold to a New York syndicate, including C. F. Hess, N. M. Watters and Mr. Bond. The sum paid was about \$100,000.

An Ottawa dispatch states that C. A. Harrison, of Victoria, B.C., and C. A. Glass have sold sixteen timber limits to R. A. O'Neil, of Detroit, for \$50,000. The deal was put through by C. D. Simpson, of Seattle. Another recent deal was the sale to parties whose names have not yet been made public of limits, for \$60,000, owned by C. A. Harrison, S. Moody, C. Gardiner, C. A. Glass and S. Heald, of Victoria.

American capitalists recently acquired large tracts of timber lands about Cowichan lake, formerly held by the Canadian Pacific Railway Company, as a part of the W. & N. grant. The sale of the land is conditional on the early completion of the railway which the Canadian Pacific agrees to construct to the holdings. The amount involved in the transaction is said to be about \$1,000,000. The location of the line has been completed.

Two thousand acres of timber land on Phillips Arm, B.C., have been sold by J. W. Prescott, acting for the owners, to a Seattle syndicate, which during the past year or more has secured a large number of tracts up the coast. The purchase price is stated to have been \$10,000. The purchasers are making arrangements to start logging operations on a large scale this season. They report that they have secured 40,000 acres of good timber land in the province.

Taking advantage of the dulness in the log market across the border, the Fraser River Lumber Mills have bought 2,500,000 feet of fir logs at Bellingham, Wash., at about \$9 a thousand. On the Vancouver side the price runs from \$10 to \$13, the latter figure being extreme. The logs will be towed to the company's plant at Fraser Mills, on the Fraser river, above New Westminster. Mr. McRae, president of the company, stated that his company was negotiating with Bellingham dealers for the purchase of 10,000 feet additional of logs.

The sawmill and timber limits of the Abbotsford Lumber Company, at Abbotsford, B.C., in the Fraser river valley, have been sold to Messrs. Arthur & J. Tretheway, formerly of Harrison lake, for \$375,000. A cash payment of \$30,000 was made when the deal was closed, and it was expected that the new owners would take over the property within a few days. The Abbotsford Lumber Company commenced business at Abbotsford about ten years ago with a small mill close to the town, but a year ago they built a large new mill on Abbotsford lake, about a mile away, and also acquired valuable timber limits close to the sawmill. A branch line of railway was also built from the Canadian Pacific line to the sawmill.

J. Warren Bell, of Vancouver, B.C., one of the best known millmen on the coast, has patented a gang oscillation which it is claimed will do its work with absolute perfection, something never before attained in the working of a gang. This new motion is known as the double oscillation movement, both the top and bottom slides being rocked or oscillated and the slides being pivoted below the upper end of the stroke. Briefly, the new movement consists in receding the saws at the beginning of the down stroke instead of advancing them as is done in all other movements.

Not the Price, but the Service of a Tool Determines its Value

Especially is this true about Cutter Heads. They are little things compared with the size of a machine on which they are used, but are a very important part thereof, if your mill is to be a paying one.

The Shimer Cutter Heads are built for hard service. They are made honest and true from start to finish. The billets of steel are forged under a powerful steam hammer refining the grain which is very dense and capable of standing the hardest strains. They are then bored out and turned into shape. This process gives the purchaser a Cutter Head which will stand up to the work on the hardest of woods and fastest feeds. Even if the belts to the Cutter Heads break while the lumber is being fed into the machine (which sometimes happens) the extra strength of the steel forged head prevents the bit seats from being forced out of line.

These tools will bear the strictest investigation. They have the "make ready" built into them to save time, save lumber, save annoyance, and turn out a finished product equal, if not superior, to any on the market.

They are not expensive and will help to reduce running expenses. Address

MILTON,
Pennsylvania

MANUFACTURERS OF QUALITY LUMBER AND SHINGLES

Keeping up the Proper Gait

in the matter of buying stock is just as essential as keeping up the proper gait selling it. You can't do an increasing business on poorly graded or manufactured stock any more than you can do a successful business on a poor class of customers. They don't hitch. The good class of trade want the best manufactured and graded lumber they can get for their money. And they're bound to have it. We're manufacturing "Quality Lumber and Shingles" with our own plants and from our own large and choice timber holdings in Quebec that will please and keep the best class of trade a dealer has or wants.

Heat, Steam, Water and Frost Proof

P. H. WILBY, 124 RICHMOND ST. WEST,
TORONTO
PHONE MAIN 1930. SOLE AGENT FOR CANADA

Does a saving of from 25 to 50 per cent of your power cost interest you?

Mr. Manufacturer:—

You know that your one best step towards greater profits is reduction in cost of production.

You also know that one of the big items of cost is power—perhaps the biggest.

Now wouldn't it interest you—wouldn't it mean money in your pocket—if you could save from a quarter to one half of what your power is costing you to-day?

Now it is just that saving we wish to tell you of. Even though your plant is equipped much above the average, it is to your interest to know about this still better system.

We want to give you all the facts about Western Electric Induction Motors and prove to you conclusively what saving in dollars and cents and what increase in efficiency that system of power will effect in your plant.

Look your plant over and figure out how many tons of metal you keep rotating over the heads of your workmen and how many square feet of belting you keep travelling at express train speed.

It takes power to keep that mass of non-productive machinery moving. Power that costs you money and adds nothing to the production of your plant.

Twenty-five to fifty per cent of power developed by your engine is lost by the line shaft and belt transmission system.

This fact has been repeatedly proven by actual tests.

You can save this loss—add it to your profits by installing Western Electric Induction Motors.

They can be mounted on the floor, wall or ceiling as required, or on the machines which they are to operate, thus eliminating all belts and hangers.

Western Electric Induction Motors are the simplest of all electrical machines. In operation they are as simple as a shaft rotating in its bearings and require no attention beyond that given to bearings.

The individual motor driven machines form compact units in themselves, thus allowing the workmen to get around them better and do better work. Besides this you pay only for the power used in actual production—only the machines which are actually employed in turning out your product need be kept running.

Western Electric Induction Motors are the result of 30 years of untiring efforts at improvement. That the Western Electric Company have produced \$230,000,000 worth of electrical apparatus during the last five years is a significant fact that speaks volumes for the efficiency of their apparatus.

These are but a few of the facts about Western Electric Induction Motors. If you are interested in increasing the efficiency of your plant—if you are interested in cutting down the cost of your power—write to-day for Bulletin No. 507.

We would be glad to have our engineers look over your plant and prove to you by actual figures what a saving you can effect by installing Western Electric Motors. This service is absolutely free and puts you under no obligation to us.

Write to-day for Bulletin No. 507 and full particulars.

Best on the Market

This is the machine for which we claim all the good Qualities possessed by any other and a great many valuable improvements besides.

This time we wish to call your attention to one of many important points which prove conclusively the superiority of the **Dunbar Logging Engines**: that of the Hydraulic Apparatus for raising and lowering the Boiler, an invention of our Mr. Dunbar, Sr. (for which patents are pending). By this device all danger from rush of water to either end of the Boiler, caused by irregularities of the road, is avoided. One of the most serious drawbacks in other Engines is the fact that the Boiler is stationary on the frame, consequently a source of great anxiety because of the danger to both the Crown Sheet and the Tubes. You can readily understand that in going up or down hill either the Crown Sheet or the Tubes are bared, causing them to become so heated that they will leak badly, and after repetition for a time the Boiler will be practically ruined.

This improvement, which supersedes our previous method for raising or lowering the boiler, has been added since cut herewith shown was made.

Should you contemplate putting in a Logging Engine we shall be glad to take the matter up with you and give you all particulars.

Quotations for Logging Sleds furnished.

MILL SUPPLIES

Fairbanks Valves

RENEWABLE DISC, asbestos packed, suitable for any pressure and any condition of service. A perfectly steam and air tight valve.

CHANGES from an old disc to a new one take less than one minute. No tools needed except a wrench to remove bonnet.

SELF CLEANING, no dirt or sediment can lodge on seat to prevent closing the valve.

STEAM GOODS ALL KINDS.

Factory - SHERBROOKE, QUE.

Fairbanks Belting

LEATHER BELTING made from the finest selected oak tanned hides. Only 16% of the whole hide utilized. Absolutely uniform.

BALATA BELTING for damp places. No better belt made to withstand the excessive moisture. Treated with special composition which does not deteriorate with age.

CHAIN DRIVES of all kinds for those who desire that kind of a drive.

TRANSMISSION APPLIANCES

Fairbanks Wood

EXPERT OPINION

Experts agree that the wood Split Pulley offers many advantages over other types.

The FAIRBANKS WOOD SPLIT PULLEYS are the result of years of experience and are conceded to be as near perfect in every mechanical detail as possible.

SHAFTING — HANGERS — CLUTCHES
COUPLINGS — BALL-BEARINGS
BEARING METAL — CONVEYING MACHINERY, Etc.

Split Pulleys

STRUCTURAL ADVANTAGES.

Made of well seasoned bass wood, carefully seasoned and kiln dried. Each segment is nailed as well as glued to the next.

The webb coostruction of the arm which is built into the rim not only strengthens it, but makes it impossible for the rim to work loose at the arm.

ALL SIZES — STRAIGHT OR CROWNED
MADE IN CANADA.

WOODWORKING MACHINERY

for every requirement.

FAIRBANKS STANDARD SCALES, TRUCKS, JACKS. FAIRBANKS-MORSE GAS & GASOLINE ENGINES, MOTORS & GENERATORS

Prices and Catalogue on application

Represented in the Province of Quebec by

WILLIAMS & WILSON

St. James Street, MONTREAL

There are more DISSTON BRAND Band and Circular Saws used than any other make, and by a large majority.

WHY?

Because millmen and sawyers recognize by the use of the DISSTON SAWS they obtain the greatest results for the least cost.

WE MAKE THIS STATEMENT WITHOUT FEAR OF SUCCESSFUL CONTRADICTION.

POINTS OF MERIT

MATERIAL

FINEST
CRUCIBLE STEEL

UNIFORMITY.
TOUGHNESS.
GREATEST TENSILE STRENGTH AND ELASTICITY.

**HARDENING
AND
TEMPERING**

DISSTON
METHOD

Being Manufacturers of our own steel, and thoroughly familiar with its makeup, we are able to absolutely adjust the hardening and tempering processes to the degree giving that perfect combination of hardness and toughness that produces the "edge, tension-holding and standing up qualities" for which the DISSTON SAWS are renowned.

GRINDING

DISSTON
METHOD

By the DISSTON METHOD all Band Saws are ground perfectly flat and uniform in thickness, thus making possible a very close adjustment of the guides without creating any friction or heat when in operation at the highest rate of feed; and all Circular Saws, whether tapered or of even thickness, are perfectly flat ground on the surface, thus insuring in all saws perfect clearance and true balance.

TENSIONING

DISSTON
METHOD

The uniformity of the material, temper and grinding is a large factor in the proper adjustment of tension; and this, together with the Disston process of tensioning, is the reason why the DISSTON SAWS will manufacture more lumber, under the same conditions, than any other brand of saw.

In the DISSTON BRAND of SAWS you have the advantages of the product of a progressive, up-to-date saw factory, the LARGEST IN THE WORLD, and where saws are made throughout, from the making of the steel itself—the superiority of which has been demonstrated for the past fifty-three years—to the finishing operation, and each process is performed by mechanics of long experience and highest order of skill.

"Hanchett" Adjustable Circular Saw Swage

That filers everywhere appreciate a good machine, has been demonstrated to us by the phenomenal success of our swages. The "Hanchett" circular saw swage is easily the most desirable in the market. The special points of excellence that are combined in this machine are: Simplicity of Construction, Great Speed, Ease of Operation, Perfect Adjustment, Remarkable Durability.

The Hanchett Adjustable Swage is an efficient eccentric die swage. The head furnished with these swages is the most expensive swage head manufactured. It is made from a solid block of forged steel, and its peculiar shape makes it expensive to prepare. But the head of a swage is the base upon which the whole swage is built, and this shape was chosen, regardless of its cost, as giving greater strength than any other form would give, being much stronger than the ordinary round heads furnished with other swages, and at the same time making a more compact swage, and this compactness is one reason for the great speed and ease with which Hanchett swages may be operated.

It is this strong head and compact construction, together with our other features of durable wearing parts, which have preserved the remarkable durability and strength of Hanchett swages, making them the longest-lived swages of any in use.

The Hanchett swage will give any style of swaging wanted, and any changes desired are controlled by the simplest possible adjustments. It will swage either close to the point only, or far down on the tooth, and will draw out a tooth which has the corner or point knocked off through striking stones or irons, etc., in a way which is possible with no other swage. It is

Hanchett Swage with Bench Attachment and Combined Jointer and Side File.

readily adjusted either to allow the die to swing past the anvil and trim off the very tips of the teeth to make them perfectly straight and clean cut, or for the die to come up against the anvil only and not trim the points of the teeth. It has been our experience that the majority of filers prefer to have the die pass the anvil, and we therefore adjust our swages in this way unless otherwise requested. But one adjustment is given as readily as the other.

Bench Attachment, Jointer and Side Filer

The increasing demand for attachments which would assist the filer in swaging his saws, has led us to place upon the market the following attachments for our swages:

A long bench attachment or casting of malleable iron, upon which all kinds of circular saws can be fitted and upon which the swage and shaper, jointer, and side file can be operated. The saw is held on the arbor by a cone which is accurately turned and holds the saw perfectly central. Cones are furnished that will accommodate arbor holes of any desired size. The swage or shaper is held in position relative to the saw by a pin which slides along the slot in the casting.

The jointer for jointing or rounding the saws is operated in connection with the bench attachment and consists of a piece of ordinary mill file held firmly in place by set-screws and adjusted by a hand wheel. This machine is simple, and it is practically impossible to get out of order. It is just what every filer wants to use every day.

We also manufacture a combined jointer and side file that has done very meritorious work. The jointing and side filing are done by three pieces of the ordinary mill file, held firmly in place by set-screws and adjusted by hand wheels. The files work on either side of the tooth and one at the point.

Swage Repairs

It has come to our notice that certain parties have been surreptitiously making repairs for our swages without authority from us. We discovered this through complaints made that some of our repairs proved defective or failed to give just the results which our customers had been receiving from our swages. Upon examination we found that the reason for this was that the parts in question did not come from our factory, but were made by outside parties, and therefore were not perfect.

Because of the trouble arising through the manufacture of imperfect parts by outside parties, we have adopted as a trade-mark the name "HANCHETT," so that our customers can prevent themselves from being imposed upon by being supplied with inferior parts, and hereafter all our dies, clamp screws, and anvils will be stamped with this name "HANCHETT," and if any of our customers receive these parts without our name stamped upon them, they may know at once that they are not genuine, and they should be returned and the proper parts secured from us.

We absolutely guarantee our swages and all swage parts, and any part furnished by us which fails to be perfect in every respect, both in workmanship and material, will be promptly replaced by us without charge.

Let us send you the latest and most up-to-date filing-room catalogue in existence. Ask for our 1909 Catalogue, No. 6

This Saw Stands Without a Rival

AND IS THE

FASTEST CUTTING SAW IN THE WORLD!

Its Superiority consists in its Excellent Temper. It is made of "Razor Steel," which is the finest ever used in the manufacture of Saws. We have the sole control of this steel. It is tempered by our secret process, which process gives a keener cutting edge and a toughness to the steel which no other process can approach.

Maple Leaf Saw Set

MANUFACTURED BY

SHURLY & DIETRICH, Galt, Ont.

Directions.—Place the set on the point of tooth, as shown in the accompanying cut, and strike a very light blow with a tack hammer. If you require more set, file the tooth with more bevel.

If you follow directions you cannot make a mistake. Be sure and not strike too hard a blow, and it will set the hardest saw. On receipt of 40 cents we will send one by mail.

We are the only manufacturers in the world who export Saws in large quantities to the United States.

Tempered by our Secret Process. Made of Refined Razor Steel. We have the Sole Right for the Dominion of Canada.

We Manufacture

HIGH GRADE BAND SAWS

Of All Widths and Lengths.

These Saws are made of Refined Razor Steel, and tempered by our Secret Process; for Fine Finish and Temper are not excelled.

"I Am Convinced
**Simonds
 Shingle
 Saws**
 Have Saved Me Money!"

A man bought nine 40 inch Simonds Shingle Saws. He wanted the best and paid the price. He knows whether he won or lost on the deal. A careful record of Shingle Saw cost was kept, with the result that after a few months the record showed, in that mill, the saw cost per thousand shingles cut to be slightly less than one-half of one cent. About 9 cent saw cost for twenty thousand shingles. That is why this Millman said he was convinced Simonds Saws are *money makers* because they are *cost savers*. This is a statement of fact. We have the proofs and

will gladly show them. If you want low cost use the right saws—Saws made of Simonds Steel, made by Simonds Methods. Dollar for dollar value is given. A saw to sell for less money than the Simonds cannot be as good. It cannot run as economically, and it will not make the same profit for you in the long run.

More shingles mean more money from the same block of wood.

For shingle saw prices and particulars, address our nearest office, giving size, number of teeth and gauge of saw desired.

Canada, United States and Great Britain, \$2.00 per year, in advance; other foreign countries embraced in the General Postal Union, \$3.00.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Special care is taken to secure for publication the latest and most trustworthy market quotations throughout the world, so as to afford to the trade at home and abroad information on which it can rely in its operations.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Vol. 29

Toronto, May 15, 1909

No. 10

New Insurance Bill's Exorbitant Tax

The insurance bill which is now before the House of Commons has been interesting lumber manufacturers and dealers throughout Canada to a great extent. At first, when the bill was introduced, it looked as though the insurance of lumber risks in companies not registered in Canada would become contrary to the law. Since then, however, thanks to the persevering efforts of some who are closely interested, the bill has been greatly modified, with the result that this class of insurance will only be subjected to two minor impediments which were not in force formerly. There is, indeed, every indication that the bill will not become law during the present session and that in the interval, before it can be brought before the House again, the representations of those who are interested will result in the removal of the impediments referred to.

As the bill now stands policies with a wide range of companies not registered in Canada may be taken out, provided that notice is given within thirty days after the effecting of the insurance, and upon payment to the Government of a tax of 15 per cent. upon the net annual cost, with a maximum of 15 cents per \$100. This reduces the Act so far as this part of it is concerned, simply to a protective measure in favor of agents' commissions.

While it is comforting to feel that the Dominion Government has decided to permit unregistered insurance companies, even under a tax more or less exorbitant, to conduct business with Canadians, it is just a question how far the Dominion Government has a right to interfere with the citizen making insurance contracts within the Dominion. If the Act had been allowed to go through as originally drafted it is quite certain that this point would have been contested in the higher courts with little delay, but lumbermen and others will doubtless be prepared to pay to the Government a reasonable tax, even although the Government have

no right to exact it, rather than appear as evading the law. Consequently even if the Act be ultra vires there would be little objection to confirming its conditions, if the burdens resulting therefrom are not unreasonable.

Further representations regarding the exorbitant nature of the proposed tax are being made and it is hoped that the Government will be content with a much smaller tax, and will prefer to accept what they may obtain without a contest, rather than force a contest, which, according to rulings which have already been given by the Privy Council, may result in the matter of insurance regulations being taken out of their field entirely and placed within the jurisdiction of the provinces.

A Genius is Needed in the West

One cannot help marvelling at the frequent lamentations which come from British Columbia about the price cutting business, and wondering how long it must be until the cup of bitterness of those who follow sane business methods, will be filled. Probably many manufacturers believe that it is already filled and overflowing, but if this were the case, one would expect to hear shortly of an improvement in the condition. Instead of this the same time-honored complaint arises yet, and the same methods continue in vogue. The latest complaint upon the subject reached the "Canada Lumberman" in the form of a letter from "Jack Donahue," which is published elsewhere in this issue. After propounding a brain-twisting problem in percentages, concerning the Oriental labor matter, the writer takes up the subject of business methods. He merely outlines the situation briefly in a question or two and leaves the rest to the imagination of those who read. It does not require a great deal of imagination to see that the situation is one which needs the hand of a genius to set it right. One would imagine that the rigors of competition would soon remedy matters, but apparently they don't. Competition will do a great deal sometimes, but it can't do everything all the time. It cannot provide brains for those who have them not, and it cannot provide foresight which will enable a man to look beyond the present, and see in the future that he will be ruined unless he mends his ways, or that he will come out right if he sticks to paths which now seem to be leading into greater darkness.

So long as there is plenty of valuable timber in British Columbia, and so long as, on paper, it seems possible to cut timber and sell it at a fair profit, so long will there be all classes of operators engaged in the business. The greater the profit the less careful will be the business methods pursued by those who are in the business only for what they can get out of it in a short time. And curiously enough, the smaller the apparent profits, the greater will be the temptation for these same operators to cut prices and overproduce, in the hope that, by making many sales at small prices, they may clear as much money as they would with fewer sales at a larger profit. This theory would work out all right and would involve nothing serious if a reasonable minimum price could be maintained, but that is where the rules of the game are generally not adhered to. When a small operator gets into troubled waters, his creditors, among them being the banks, press for funds, to get which he must make sales, even at a loss. The banks are naturally on the side of the successful operators and would like to help them, but they, too, are the creatures of the situation to a great extent. They may even wish to crowd the cut-throat operators out of business, as "Jack Donahue" suggests, but in so doing they increase, in times of business depression, the influences for trouble which multiple rapidly enough, if left to themselves.

Can any one suggest a remedy for all this? He would be a benefactor if he could. An almost identical situation has been in operation in the Southern States among the yellow pine operators for more than a decade, and does not appear to be any nearer solution than when it first appeared. It is even in a more aggravated form in the Southern States than in British Columbia, but British Columbia is approaching to a similar state of affairs at a rapid gait. Something must be done and done quickly. Combinations to regulate prices are looked upon with disfavor by the public and by the Governments, but something in the nature of a selling arrangement can surely be conceived which will not transgress the law. It was attempted recently and failed lamentably because of the refusal of those who took part in it to keep faith. With the lessons of recent bitter experiences, perhaps something better can be managed next time. It is worth a trial.

Trade Conditions; Seen from Within

Views of Lumbermen in All Parts of Canada—Eastern Situation Looks Brighter—Western Trade Suffering from Several Kinds of Complaints

There are many views among lumbermen throughout Canada as to the actual conditions and prospects of the lumber business to-day. With a view to ascertaining, in some measure, what these ideas are and whether there is any general tendency among them, the "Canada Lumberman and Woodworker" addressed letters of enquiry to a number of prominent manufacturers and dealers, in various parts of the country, asking for an expression of opinion upon the present conditions and the prospects for the immediate future. A number of interesting replies have been received.

Speaking generally, there is a hopeful spirit in most parts of the country, especially in Ontario and the eastern provinces. The trade in the prairie provinces and British Columbia, however, does not appear to be so satisfactory as elsewhere. Bad weather seems to have depressed the trade in the interior of British Columbia and in spite of a fair demand there is a general impression that the most logical and necessary course, in order to remedy matters, will be to curtail the output. One large firm, which has orders ahead for plenty of work, reports that the volume of trade on the coast is quite satisfactory, although the prices for lumber have not advanced materially during the last twelve months. This is partly accounted for by the fact that when the prices of lumber broke a year ago the retailers in the prairies stocked up heavily and still have plenty of material in their yards.

Ontario Trade Promises Well.

An Ontario firm which believes there is reason to feel optimistic writes as follows:—

Rainy River, Ont., April 29.—The lumber business in this district is showing a marked improvement over the preceding two years. While trade is not heavy, we are getting a steady supply of orders, which we expect will continue for the balance of the season. The mills in this district are handicapped owing to the late spring, the ice remaining in the river later than any former year on record.—Rainy River Lumber Company.

Another Ontario firm which has been receiving encouragement from record orders sums matters up in the following manner:—

Biscotasing, Ont., May 5.—We might say, judging from our own experience, that prospects look very good indeed for lumber. Although it has been a very late spring, which has no doubt retarded building operations to some extent, our shipments for the month of April have been the best that we have had for some years and the inquiries received for blocks of pine lumber make it apparent that the market is already getting short in quite a few sizes.—Booth & Shannon.

The situation in Ontario is not seen with the same eyes by all parties. One prominent manufacturing firm, which desires not to have its name in print, foresees improvement, but does not indulge in a rosy view regarding its immediate occurrence. This is the view prompted by careful and conservative consideration of past events and present conditions. It may be considered by some that it is too conservative, but it has, at least, the merit of being on the safe side. This firm writes as follows:—

Stocks in all hands are light—manufacturers, wholesalers or retailers. Certain items in white pine are markedly scarce. Costs of production and of doing business remain high.

Notwithstanding these facts, demand is only fair and competition for business is very keen. Undoubtedly tariff conditions in the States promote uncertainty in business over there, which is reflected on this side. This, however, explains only part of the situation.

Our judgment is that no matter what the nature of a panic may be it takes longer to recover than we should like. We believe return to better times will be gradual throughout the season. If we have good crops this fall their influence will be very potent. We have great confidence in the resumption of good business within the next ten to eighteen months, but just when that good time will be we are not to-day prepared to conclude.

Another Ontario firm which prefers to have no publicity given to its name states that, generally speaking, there is certain to be an advance in lumber prices, present conditions pointing that way. Their outlook is a cheerful one and everything points to a sane and careful revival of trade.

By way of contrast with the hopeful views expressed by most correspondents, the following will be sufficient as a counteracting influence if any is needed:—

Goderich, April 27.—We must say that the outlook is very discouraging indeed. It is even worse than a year ago. In fact, there is nothing encouraging to note whatever at present.—The Goderich Lumber Company.

Passing to the next letter it is pleasant to come across someone who believes that prosperity is in sight. Here is a brief but welcome opinion:—

Sarnia, Ont., April 29.—We find a very healthy condition existing at present in the lumber business. Inquiries are numerous and a good healthy

business is being offered; prices ruling very firm. I think that the prospects of the future are bright and that there will be a general increase in the demand. We find an occasional lumberman offering stock at ridiculously low prices, the object of which we cannot conceive.—Cleveland-Sarnia Saw Mills Company.

At Ottawa, a much larger volume of trade is reported and the outlook is promising, according to the following:—

Ottawa, Ont., April 27.—We find a much larger volume of trade now than there was at this time last year, and feel from the large amount of building permits which are being issued all over the country that the lumber business must improve a great deal more yet, during the next month or so, and that on the whole we will find this year a good average in the lumber trade.

Our neighbors to the south are not purchasing a great deal at the present time owing, no doubt, to the uncertainty of the tariff question, but as soon as this matter is permanently settled we feel that a much larger trade must come our way, as we are inclined to believe the stocks held are very low for this time of the year; not nearly large enough, it is thought, to meet the demand.

English trade is still very disappointing, but personally, from orders we have booked during the past few days, we consider that a betterment in trade is shown, with plenty of room for further improvement. Prices, especially in white pine, are very firm, showing improvements in some lines.—Williams, Edwards & Company.

Montreal Dealers Expecting Improvement.

Wholesale dealers in Montreal have not experienced so good a trade during the commencement of the season as they hoped for. The bad weather is blamed largely for this, as shown by the following letter:—

Montreal, May 7.—As to the prospects, the season opened up in a most satisfactory and reassuring manner, but through the most unfavorable and unmerciful weather which has prevailed for so long a time past, all the goodness of those prospects faded away so to speak, and now, due to such conditions, the market has remained somewhat dull.

The demand for lumber has fallen off, the contractors holding back and waiting for better and more favorable weather to start operations.

We have also to report that our trade with the United States has been at a regular standstill for some two months past. This is due to wholesalers having gone into extensive purchasing last January when the prospects were looking bright and finally turning out to be a regular disappointment.

We have nought to complain of in the prices we are getting in general for lumber, and consider there is but little difference in them as compared with last year's.

We are of the opinion that had it not been for the lateness of the season, business would be very good presently, but hope that it is due to pick up shortly, and expect that the present year's demand will outgrow last.—Wilfrid Talbot.

Briefly put, the situation as it presents itself to another Montreal lumber dealer is as follows:—

Montreal, May 3.—Trade generally is improving. The demand for cull lumber is good and there is some improvement in the call for better grades.—C. A. Spencer.

Another Montreal firm, which takes a cautious but optimistic view of matters, writes as follows:—

Montreal, April 27.—It is most difficult at the present time to make a definite statement as regards future trade. We do think, however, that there is a better feeling in the trade generally, although it is not brisk, by any means. It is certainly better than at this time last year, and there seems to be a general feeling that we will have a fair trade later in the season, particularly if the crop conditions are favorable.—The McLennan Lumber Co.

Business Increasing at Quebec.

As viewed in Quebec, there is a marked improvement in conditions, according to the following:—

Quebec, May 5.—From the writer's point of view, a feeling of optimism is undoubtedly in evidence, which is assuming more definite form in increased enquiries and business as the season advances.

Prices are generally firm and buyers are beginning to realize the markets are not exclusively in their hands, although the situation is not yet strong enough to warrant an advance in values.

The improved financial situation both here and abroad is restoring confidence, and although the stocks of lumber generally are large, the writer feels that we may look forward to a fairly prosperous season.—J. Burstall & Co.

In Nova Scotia the improvement is strongly noticeable, according to the following:—

Amherst, N.S., May 5.—The present condition of the lumber business in the Maritime Provinces is much better than last year, and the prospects for the season are good. Prices range from \$1 to \$2.50 per thousand better than last season, with an active demand. About 70 per cent. of the lumber cut in New Brunswick and Nova Scotia is spruce. About 10 per cent. each pine, hemlock and birch. Both the English and American markets are considerably better than a year ago. The West India and South American markets are also

very good. Quite a large quantity of lumber cut in southern Nova Scotia goes to the latter markets.—Rhodes, Curry & Company.

The situation among the mountains mills in southern British Columbia is at present rather doubtful according to the following letter from the Crow's Nest Pass Lumber Company:—

Wardner, B.C., May 4.—We are having very backward weather and a very late spring. Under the most favorable conditions a fair crop may be harvested in the provinces of Manitoba, Saskatchewan and Alberta, but only in the event that all conditions are favorable from now on. There is some demand for lumber, which is principally for filling in and replacing the retail stocks, which have been very badly depleted and run down during the recent depression. Building operations have not yet become normal, and it is not likely that there will be any great demand for building materials this year. I believe that the "trade" will this year absorb all the available supply of dry timber in British Columbia, North Saskatchewan and Western Ontario. I think that general curtailment in lumbering operations is justified, and that it is unwise at the present time and under the present conditions to make any arrangements for increased production. An advance in the prices of lumber is an absolute necessity, in order that the lumber manufacturers may realize a profit on their operations. This can never take place when there is more lumber manufactured than the market is in a position to absorb, which will be the case if all the sawmills are operated to their full capacity this season.—P. Lund.

Pacific Coast Trade Has Many Worries.

British Columbia trade is passing through many vicissitudes, as shown by the following letters:—

Fraser Mills, B.C., May 4.—The volume of trade is quite satisfactory, although, generally speaking, lumber has not advanced materially in the last twelve months, in spite of the fact that prices on practically all staple articles have experienced a rise. The contributing causes are many. Throughout the prairies, retail dealers and line yards stocked up heavily when the market broke a year ago, and this stock will have to be consumed before there will be a demand in volume large enough to bring about better prices. With the immense amount of railroad construction work in view, the future twelve months look more hopeful than the past year.

With regard to export business, the entire world has been rather slow in recuperating from the financial panic of 1907, but, unless all signs fail, we are going to have a very good summer and winter business. There has been very little buying ahead for September to December loading, for west coast of South America, Australia, the United Kingdom, South Africa and China, and naturally they must come into the market very soon. Stocks are not large, and with the closing down of a number of the larger mills on the other side of the line, prices must necessarily advance.

Referring again to conditions throughout Canada, and especially the Northwest, there is a disturbing factor in the trade which must be contended with, and which will warrant the best efforts of the Retail Lumber Dealers' Association, as well as all legitimate manufacturers, and that is the mail order business. In the past few months there have sprung up some two or three wholesalers who are advertising that they sell direct to the consumers. Our company sells only to legitimate dealers, and this is a policy we expect to maintain, but the brunt of the work of ridding the trade of mail order houses will lie with the Retail Dealers' Association. Without their co-operation and assistance it will be hard to overcome the advances being made by the mail order houses at the present time.—Fraser River Lumber Company.

Vancouver, B.C., May 4.—In our opinion there has been a gradual improvement since the spring trade opened. It probably has not been as rapid as some anticipated, but nevertheless conditions are much more favorable at present than those prevailing through January and February. We do not consider present prices high enough to afford manufacturers a legitimate profit on their output, as the cost of raw material is steadily advancing, and it is extremely doubtful if the net profit (notwithstanding the advance in prices for

the finished product), is greater than in January or February, this applies especially to the shingle industry. However, the prospects are that with the increased demand that usually comes after the crops are reasonably assured, and from the fact that lumber stocks are, generally speaking, more or less depleted throughout the middle West and Ontario, the year will prove a fairly profitable one.

The feature which has attracted our attention is that, while there has been a continuous advance in prices, buyers have been unusually conservative in placing orders, again we refer particularly to the shingle business, the only explanation we can offer is that they expected a decline when all the mills commenced operations. If this is the correct interpretation, then they are doomed to disappointment as, instead of a decline, there has been a steady advance, and all the mills are now running full time. In fact, as above stated, we do not see how the manufacturers can afford to sell at lower prices and still realize a living profit.

Since you have invited us to express our opinion on any subject of interest to the lumber trade, we accept the opportunity of referring briefly to a question which has already received some attention in the "Western Lumberman," namely, does the wholesaler "bear" the market. When we mention "wholesaler" we do not include the pirate and scalper, but only those carrying on a legitimate wholesale or commission business. It has been alleged that brokers and wholesalers "bear" prices, and demoralize trade conditions generally. It is not our intention, at this time, to champion the cause of these two lines of business, but we have given the matter some consideration and have found, in all cases investigated, that the manufacturers have quoted lower prices and offered more attractive terms than the wholesalers, and in no case did we find the latter's quotations lower than the manufacturers'. Of course there may be isolated cases, but generally speaking, we do not think that the manufacturers have a real grievance against bona fide wholesale and commission houses. Speaking for ourselves, we are prepared to show that prominent Vancouver manufacturers are under-quoting us. Of course, we realize that it is purely their own business, and no one has any right to dictate or suggest at what price they should offer their output. We submit, however, that when the manufacturers themselves are offering lower prices, and longer terms of credit, than the wholesalers, they should not accuse the latter of demoralizing trade, and of being a menace to legitimate business. As we have stated, such terms apply only to the pirate and scalper, and we are heartily in accord with any movement that will remove both these disturbing factors from the lumber and shingle business.—C. H. Gillis & Company.

Vancouver, B.C., May 6.—We find there is an active demand for lumber, but the prices offered are so low that the business is not very attractive to the trade here.

The manufacturers feel that they are not getting value for their products, and some of them would rather close down than continue to sell at present prices.

There is an over-production of lumber at the present time, caused by the building of too many mills, and until the demand overtakes the supply, conditions will not improve very much. The building trade is very active, and no doubt this will result in higher prices being offered very shortly.—E. H. Heaps & Company.

A large Vancouver firm of manufacturers take so unpleasant a view of the situation on the Pacific coast that they do not wish to be quoted. They assert that they are entirely in the dark and that the lumber business is getting to be a puzzle to them. After looking for improvement in conditions for several months, they say that conditions have really been getting worse, so far as prices are concerned. As to demand, the local trade is very good, absorbing at least 50 per cent. of their output and the car trade is fairly good, but prices are disappointing. Unless the output of the saw mills is considerably curtailed, they say they cannot anticipate good prices.

An English View of the Advance in Whitewood

The increased price of whitewood is discussed in a recent article in the London, Eng., "Timber Trades Journal," and the situation in a general manner is summed up as follows: "There can be no question about the rise in the price of whitewood since last autumn, but it may be interesting to inquire whether this rise has been caused by a diminution in supply or by an increased demand. In the latter case it ought, of course, to presage an improvement in trade, which everyone hopes may be the case. It is, however, somewhat more probable that the cause is to be found in the gradual reduction in the manufacture of white sawn wood, not only in Europe, but on the other side of the Atlantic.

"The rapid rate at which the building and opening of wood pulp mills has of late years proceeded in the north of Europe, and is still going on, must undoubtedly have a perceptible effect upon the forests. This must especially be the case in the northernmost forest districts of Sweden, where the proportion of whitewood is relatively smaller than in the forests further south. But even in the Hernosand, Sundswall, and Soderhamn districts the constant drain upon the white trees (*Pinus abies excelsa*) must sooner or later prejudicially affect the sources of supply, and gradually increase the difficulty of providing for the ever-growing demands of the pulp mills. It must also be remembered that the population in the northern districts of Sweden is small, and consequently, if an increasing number of men be employed in getting out pulpwood, there will necessarily be fewer for felling sawlogs, and what is thus given to pulpwood must to some extent be taken from the sawmills.

"It is certainly contended, and is probably true, that at the present time the pulpwood is chiefly, if not entirely, obtained from stunted, undersized trees and thinnings, and that the removal of such growths is an

absolute benefit to the forests. That may be granted, though it, of course, does not affect the question of labor, just mentioned, as between sawmills and pulp mills. But, allowing all this, it is impossible to believe that these undersized trees will prove a very lasting source of supply, especially if new pulp mills continue to be built. Sooner or later the day must arrive when the small wood will become scarce, and then it is more than probable that the larger trees will be raided for the benefit of the pulp manufacturer, while the make of white deals and battens will correspondingly suffer. This will necessarily tend to keep up the price of sawn whitewood, even when the demand is only normal, but should a sudden revival of trade take place or a spirit of speculation seize upon the buyers, there is little doubt that the price of whitewood might advance almost by 'leaps and bounds.'

"What at present applies more particularly to Sweden may also, though probably in less degree, be applied to Scandinavia generally, as well as to Russia, for it is doubtless only a question of time when wood pulp will be a staple product of the last-named country.

"Meanwhile, Canada is feeling the effect of the wood pulp demand, and in that country the plunge, at which the Europeans are hesitating, has been boldly taken. Some of the Canadian forest owners or log buyers are already cutting part of their produce into short lengths and sending them by rail to the United States for use in the pulp mills. It has been stated on good authority that this mode of dealing with the spruce logs is more simple and quite as profitable as converting them into sawn wood. If this be so, the export of spruce seems destined to diminish rather than increase, and (*ceteris paribus*), the upward tendency in the value of other classes of whitewood will probably continue."

Mail Order Houses Making Trouble

Manitoba Retailers have to face Unfair Competition—Prompt Action Needed

The mail order lumber business has recently hit the retail dealers in the United States so hard that there has been a general outcry against them among those who are engaged in the legitimate business of manufacturing, wholesaling or retailing lumber. The same class of business has also been making its appearance in Canada. Some of the large mail order firms in the United States have organized enormous campaigns and are sending thousands of circulars and catalogues about the country in their efforts to establish the mail order business thoroughly. There is no question that across the line the mail order business has become a most important factor in the depression of lumber prices. Whether it has come to stay is a difficult matter to foretell, though it is certain that when business conditions are depressed it has a strong argument to present to the farmers and other consumers of lumber who consider first of all the matter of prices. Quality is a matter which is somewhat difficult for the ordinary lumber consumer to appreciate properly, as he seldom sees two bills of lumber which have been sold by different companies at varying prices. He does not understand, as a rule, that although he has obtained lower prices he has also obtained an inferior article which a bona fide dealer could have sold him at an even cheaper price.

All this, however, is somewhat beside the question so far as the readers of the "Canada Lumberman" are concerned. The question is what are they going to do about it, now that the same source of trouble has made its appearance in Canada. Two or three firms have recently been making a great display in the newspapers with advertisements calling upon people who want lumber to send for their catalogues, and promising to give them better and fairer prices than they could obtain from those who deal in lumber in the regular manner. There would not be a great objection to anyone seeking to sell lumber by means of regular advertising methods. It is every man's own business how he seeks to make sales, but there is a limit to the class of argument which can be considered as fair. These companies are not content with calling for trade in the usual manner. They are doing their best to ruin the business and the reputation of those with whom they do not see eye to eye. Having been for some time in the lumber business they must appreciate how groundless are the claims that there is a lumber trust, but they have no hesitation about picturing in large cartoons the alleged operations of lumber trusts and calling upon consumers of lumber to believe that they have been systematically robbed by the regular lumber dealers.

The appearance in the market of firms which follow these dishonest methods calls for immediate action on the part of those whom they are attacking. The retailers, who are the ones to suffer, should do something at once. It is a difficult enough matter for retailers to obtain profitable trade at present, but it will be almost an impossibility before long if unscrupulous manufacturers who have become desperate on account of low prices, turn round and declare that there is a combination in the trade which makes prices higher than they ought to be, and proceed to cut the prices still lower and to fish for trade by selling direct to the consumer.

Manitoba's Trade Good—Mail Order Methods

Mr. J. L. Campbell, of Campbell & Carman, Toronto, wholesale lumber dealers, has returned from a three weeks visit to Melita, Man., where he has been attending to his local interests. Mr. Campbell reports that "the building trade in the West promises to be exceptionally good this season. The farmers are in good shape and if there is a fair average crop or even slightly below a fair average, there will be a record business year on the prairies. Prices are advancing there and the people have the money to pay the increases. Some idea of the condition of things can be gained from the fact that the banks are getting so much money that it is embarrassing them. The farmers are depositing so much money that the banks do not know what to do with it. The banks report that they have never before seen anything like the present situation.

"The wheat seeding in southern Manitoba will be practically finished by the 15th of May. In the northern part of the province it is somewhat later. In southern Manitoba there was about 25 per cent. of the seed in the ground before the snowstorm at the end of April. This storm delayed seeding generally, about five or six days."

Mr. Campbell also reported that retailers in the prairies are somewhat concerned about the recent operations of the mail order lumber houses. He did not think, however, that the latter were meeting with much success. The farmer regarded them with some suspicion, when they quoted prices lower than the retailer could afford to sell at. An additional influence in favor of the retailers was the fact that the mail order houses imposed pretty stringent conditions upon the farmers. They

required payment of one-third cash with the order and the farmer also had to pay the freight. The farmer also did not get much comfort until the remaining two-thirds was paid. Compared with the generous credit systems of the retail yards, this rigorous treatment did not please the farmers. It might be thought that because the farmers now had plenty of money they could easily pay cash, but, on the other hand, those who have the money are those who already have most of their building done. The lumber buying farmers were mostly the new arrivals, who needed generous treatment now as much as ever. The retailers would carry them along until they had sold their crops. It did not look, therefore, as though the retailers would be troubled much by the mail order houses.

Concatenation at Toronto on May 28th

A meeting of the members of the Hoo-Hoo for Eastern Canada was held in Toronto on May 7th, to appoint committees and make other arrangements for the approaching concatenation. It was decided that the concatenation should be held in Toronto on May 28th. The banquet will be held at the Temple Building. An advisory committee, consisting of Messrs. Laidlaw, Cane, Hagar, MacBeth and McLaughlin, was appointed to co-operate with the Vicegerent Snark in securing talent for the entertainment. The indications already are that a large class of desirable kittens will be secured for the concatenation.

"Canada Lumberman" is Read Everywhere

The value of the "Canada Lumberman and Woodworker" to its readers is well evidenced by the enquiries which reach it continually. The trade enquiries which are published regularly in the "Canada Lumberman and Woodworker" are followed closely by readers in many parts of the world. A recent communication regarding these enquiries comes from a reader in San Francisco. Others are continually reaching us from points in all parts of the world wherever lumber matters are of interest. There is no better source of publicity or information for lumber and its cognate interests than the "Canada Lumberman and Woodworker."

American Newspapers Asking For Free Pulpwood.

The tariff fight is still being waged with vigor in the United States, the scene now being the Senate. At a meeting of the American Newspaper Publishers' Association held recently the following resolution was adopted:

The American Newspaper Publishers' Association at its annual meeting in New York, with the largest attendance in the history of the organization, comprising representatives of 290 daily newspapers, instruct its secretary to telegraph and write immediately to each United States senator, advising him that the association by a rising vote earnestly urges the confirmation by the Senate of the action of the House in the matter of pulp and print paper.

The investigation by the select committee of the House of report covering a period of ten months and surpassing in thoroughness any trade enquiry ever attempted in tariff history, has shown that American paper mills actually make paper cheaper than the most modern Canadian mill, and therefore a duty upon imported print paper is in the nature of a concession to the American mills. We are informed that the paper manufacturers are trying to induce the Senate to raise the rate of duty fixed by the Payne Bill. The success of such an effort would prevent the possibility of an agreement with Canada, which arrangement the select committee deemed of the most importance in order that we might continue to obtain from that country the considerable supply of pulpwood now used by American mills in news print paper manufacture.

The well matured and unanimous recommendations of the select committee, composed of both political parties, have safeguarded the interests of paper makers and consumers against the possibility of hostile action in Canada.

We protest against any procedure which will ignore the work and results of the House committee's investigation and which, by provoking a trade war and stopping the exportation of pulpwood from Canada, may bring great loss to American newspapers and destruction to American forests.

For a period of years the American newspapers have been the victims of paper combinations, mergers, corners and secrecy in paper quotation. The failure of paper makers to employ technical skill in the operation of their plants has increased the burdens of the consumers. We want to put an end to these abuses by broadening the market and by stopping schemes such as that planned in the creation of the International Paper Company, which aimed to destroy competition and give value to a collection of antiquated mills by bringing them under one control with 7,000 square miles of timber lands and undeveloped water powers to the extent of 194,000 horse-power. We object to these gigantic speculations at our expense.

Every obligation which the paper maker owed to the Government as a tariff beneficiary, has been violated. Newspapers have been forced to bear the burden of frequent fluctuations and artificial stimulations of paper prices. The publishers ask fair treatment.

Current Topics—What Others Think

Letters to the Editor on Subjects of Present Interest—Price Cutting and Dishonest Branding—Foreign Trade Openings

Editor "Canada Lumberman, Sir: Here are some nuts for your readers to crack:

If a sawmill employing both white and Oriental labor, upon finding that in dollars and cents 13 per cent. of the pay roll is distributed amongst Orientals, and 87 per cent. amongst white men, decide that they will reduce the number of Orientals by 133, and add that number of names to the white side of their pay roll, find that they have left 60 per cent. Oriental and 40 per cent. white labor, what was the proportion before the 133 Orientals were replaced? If 60 per cent. of the number of men employed, plus 133 which have since been replaced, represented only 13 per cent. of the money paid out in wages to Orientals, and 40 per cent. minus 133 men who replaced the Orientals receive the remaining 87 per cent., what proportion does each white man receive if their emoluments are equal? What is the individual stipend of the Oriental?

If a number of citizens should form an association for the purpose of properly conducting the affairs of a legitimate business, or undertaking (not necessarily the lumber business), and after debating all the features of such business, and giving the same due consideration, decide upon a certain selling list which it has been figured would give them a fair profit and nothing more, and each man pledges himself to his associates that the business which he conducts shall be conducted by that list, and then some of those same men go back to their places of business and enter upon their books everything in the shape of business that is offered them, even though it may be 20 per cent. or 25 per cent. below the list, what shall we say of them? How are these men viewed in the eyes of their associates? How in the public eye? As men of these methods become better known, does not the public learn to distrust them? Are they not by their own acts, and apparently from choice, liars and deceivers? Why do they shove themselves forward in an association of reputable men, when their methods are the most disreputable? How are such men viewed by their banker? Ay, the banker may be crowding them up to his cut-throat, or cut price business methods with a desire to closing up the account, knowing full well that the longer such methods are pursued the more disastrous the termination.

What connection has a sawmill which is always advertising cuts which are away beyond its capacity, with that of a windmill? With the latter, if the wind doesn't blow the mill doesn't go, and perhaps also in the former case the wind adds very materially to the number of thousands sawn.

In Washington the lumber and shingle mills are operated solely for quantity, regardless of quality, and it has been reported that now some of them have resorted to the expedient of branding their product "Manufactured in British Columbia." Over there they boast of sawing from 40,000 to 50,000 per day on one single machine. Here we have just as good men and better timber and we are satisfied with 25,000 on the same machines. Do you see the point?

When a Washington man toots his horn about quantity, remember that Washington methods are the same wherever employed, and "Manufactured in British Columbia" is an infringement used by some of them.
